UNITED STATES
SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10-Q

**[X] QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE
ACT OF 1934**

For the quarterly period ended June 30, 2010

OR

**[] TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE
ACT OF 1934**

For the transition period from to

Commission File Number: 1-768

CATERPILLAR INC.

(Exact name of registrant as specified in its charter)

Delaware

37-0602744

(State or other jurisdiction of incorporation)

(IRS Employer I.D. No.)

100 NE Adams Street, Peoria, Illinois

61629

(Address of principal executive offices)

(Zip Code)

Registrant's telephone number, including area code:

(309) 675-1000

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☒ No ☐

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes ☐ No ☐

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definitions of "large accelerated filer", "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer	<input checked="" type="checkbox"/>	Accelerated filer	<input type="checkbox"/>
Non-accelerated filer	<input type="checkbox"/>	Smaller reporting company	<input type="checkbox"/>

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☒

At June 30, 2010, 630,472,409 shares of common stock of the registrant were outstanding.

Edgar Filing: CATERPILLAR INC - Form 10-Q

All short-term investments, which consist primarily of highly liquid investments with original maturities of three months or less, are considered to be cash equivalents.

Non-cash activities:

During 2010 and 2009, we contributed 1.0 and 18.4 million shares of company stock with a fair value of \$62 and \$659 million to our U.S. benefit plans, respectively.

See accompanying notes to Consolidated Financial Statements.

Table of Contents

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

1. A. Basis of Presentation

In the opinion of management, the accompanying financial statements include all adjustments, consisting only of normal recurring adjustments, necessary for a fair statement of (a) the consolidated results of operations for the three and six month periods ended June 30, 2010 and 2009, (b) the consolidated financial position at June 30, 2010 and December 31, 2009, (c) the consolidated changes in stockholders' equity for the six month periods ended June 30, 2010 and 2009, and (d) the consolidated statement of cash flow for the six month periods ended June 30, 2010 and 2009. The financial statements have been prepared in conformity with generally accepted accounting principles in the United States of America (U.S. GAAP) and pursuant to the rules and regulations of the Securities and Exchange Commission (SEC). Certain amounts for prior periods have been reclassified to conform to the current period financial statement presentation.

Interim results are not necessarily indicative of results for a full year. The information included in this Form 10-Q should be read in conjunction with the audited financial statements and notes thereto included in our Company's annual report on Form 10-K for the year ended December 31, 2009 (2009 Form 10-K).

The December 31, 2009 financial position data included herein is derived from the audited consolidated financial statements included in the 2009 Form 10-K but does not include all disclosures required by U.S. GAAP.

B. Nature of Operations

We operate in three principal lines of business:

(1) **Machinery** - A principal line of business which includes the design, manufacture, marketing and sales of construction, mining and forestry machinery: track and wheel tractors, track and wheel loaders, pipelayers, motor graders, wheel tractor-scrapers, track and wheel excavators, backhoe loaders, log skidders, log loaders, off-highway trucks, articulated trucks, paving products, skid steer loaders, underground mining equipment, tunnel boring equipment and related parts. Also includes logistics services for other companies and the design, manufacture, remanufacture, maintenance and services of rail-related products.

(2) **Engines** - A principal line of business including the design, manufacture, marketing and sales of engines for Caterpillar machinery, electric power generation systems, locomotives, marine, petroleum, construction, industrial, agricultural and other applications, and related parts. Also includes remanufacturing of Caterpillar engines and a variety of Caterpillar machine and engine components and remanufacturing services for other companies. Reciprocating engines meet power needs ranging from 10 to 21,800 horsepower (8 to over 16 000 kilowatts). Turbines range from 1,600 to 30,000 horsepower (1 200 to 22 000 kilowatts).

(3) **Financial Products** - A principal line of business consisting primarily of Caterpillar Financial Services Corporation (Cat Financial), Caterpillar Insurance Holdings, Inc. (Cat Insurance) and their respective subsidiaries. Cat Financial provides a wide range of financing alternatives to customers and dealers for Caterpillar machinery and engines, Solar gas turbines as well as other equipment and marine vessels. Cat Financial also extends loans to customers and dealers. Cat Insurance provides various forms of insurance to customers and dealers to help support the purchase and lease of our equipment.

Our Machinery and Engines operations are highly integrated. Throughout the Notes, Machinery and Engines represents the aggregate total of these principal lines of business.

C. Accumulated Other Comprehensive Income (Loss)

Comprehensive income (loss) and its components are presented in Consolidated Statement of Changes in Stockholders' Equity. Accumulated other comprehensive income (loss), net of tax, consisted of the following:

Table of Contents

(Millions of dollars)	June 30, 2010	June 30, 2009
Foreign currency translation	\$175	\$427
Pension and other postretirement benefits	(4,293)	(5,460)
Derivative financial instruments	43	172
Retained interests		(11)
Available-for-sale securities	30	(34)
Total accumulated other comprehensive income (loss)	\$(4,045)	\$(4,906)

2. New Accounting Guidance

Fair value measurements - In September 2006, the Financial Accounting Standards Board (FASB) issued accounting guidance on fair value measurements, which provides a common definition of fair value and a framework for measuring assets and liabilities at fair values when a particular standard prescribes it. In addition, this guidance expands disclosures about fair value measurements. In February 2008, the FASB issued additional guidance that (1) deferred the effective date of the original guidance for one year for certain nonfinancial assets and nonfinancial liabilities and (2) removed certain leasing transactions from the scope of the original guidance. We applied this guidance to financial assets and liabilities effective January 1, 2008 and nonfinancial assets and liabilities effective January 1, 2009. The adoption of this guidance did not have a material impact on our financial statements. See Note 17 for additional information.

In January 2010, the FASB issued new accounting guidance that requires the gross presentation of activity within the Level 3 fair value measurement roll forward and details of transfers in and out of Level 1 and 2 fair value measurements. It also clarifies existing disclosure requirements regarding the level of disaggregation of fair value measurements and disclosures on inputs. We adopted this new accounting guidance for the quarterly period ended March 31, 2010. The adoption of this guidance did not have a material impact on our financial statements. See Note 17 for additional information.

Business combinations and noncontrolling interests in consolidated financial statements - In December 2007, the FASB issued accounting guidance on business combinations and noncontrolling interests in consolidated financial statements. The guidance on business combinations requires the acquiring entity in a business combination to recognize the assets acquired and liabilities assumed. Further, it changes the accounting for acquired in-process research and development assets, contingent consideration, partial acquisitions and transaction costs. Under the guidance on noncontrolling interests, all entities are required to report noncontrolling (minority) interests in subsidiaries as equity in the consolidated financial statements. In addition, transactions between an entity and noncontrolling interests are treated as equity transactions. We adopted this new guidance on January 1, 2009. As required, the guidance on noncontrolling interests was adopted through retrospective application. The adoption of this guidance did not have a material impact on our financial statements. See Note 19 for further details.

Disclosures about derivative instruments and hedging activities - In March 2008, the FASB issued accounting guidance on disclosures about derivative instruments and hedging activities. This guidance expands disclosures for derivative instruments by requiring entities to disclose the fair value of derivative instruments and their gains or losses in tabular format. It also requires disclosure of information about credit risk-related contingent features in derivative agreements, counterparty credit risk, and strategies and objectives for using derivative instruments. We adopted this new guidance on January 1, 2009. The adoption of this guidance did not have a material impact on our financial statements. See Note 4 for additional information.

Employers' disclosures about postretirement benefit plan assets In December 2008, the FASB issued accounting guidance on employers' disclosures about postretirement benefit plan assets. This guidance expands the disclosure set forth in previous guidance by adding required

Edgar Filing: CATERPILLAR INC - Form 10-Q

disclosures about (1) how investment allocation decisions are made by management, (2) major categories of plan assets, and (3) significant concentration of risk. Additionally, this guidance requires an employer to disclose information about the valuation of plan assets similar to that required under the accounting guidance on fair value measurements. We adopted this guidance for our financial statements for the annual period ended December 31, 2009. The adoption of this guidance did not have a material impact on our financial statements.

Recognition and presentation of other-than-temporary impairments - In April 2009, the FASB issued accounting guidance on the recognition and presentation of other-than-temporary impairments. This new guidance amends the existing impairment guidance relating to certain debt securities and requires a company to assess the likelihood of selling the security prior to recovering its cost basis. When a security meets the criteria for impairment, the impairment charges related to credit losses would be recognized in earnings, while noncredit losses would be reflected in other comprehensive income. Additionally, it requires a more detailed, risk-oriented breakdown of major security types and related information.

Table of Contents

We adopted this guidance on April 1, 2009. The adoption of this guidance did not have a material impact on our financial statements. See Note 8 for additional information.

Subsequent events - In May 2009, the FASB issued accounting guidance on subsequent events that establishes standards of accounting for and disclosure of subsequent events. In addition, it requires disclosure of the date through which an entity has evaluated subsequent events and the basis for that date. This new guidance was adopted for our financial statements for the quarterly period ended June 30, 2009. The adoption of this guidance did not have a material impact on our financial statements.

In February 2010, the FASB issued new accounting guidance that amends the May 2009 subsequent events guidance described above to (1) eliminate the requirement for an SEC filer to disclose the date through which it has evaluated subsequent events, (2) clarify the period through which conduit bond obligors must evaluate subsequent events, and (3) refine the scope of the disclosure requirements for reissued financial statements. We adopted this new accounting guidance for our financial statements for the quarterly period ended March 31, 2010. The adoption of this guidance did not have a material impact on our financial statements.

Accounting for transfers of financial assets - In June 2009, the FASB issued accounting guidance on accounting for transfers of financial assets. This guidance amends previous guidance and includes: the elimination of the qualifying special-purpose entity (QSPE) concept; a new participating interest definition that must be met for transfers of portions of financial assets to be eligible for sale accounting; clarifications and changes to the derecognition criteria for a transfer to be accounted for as a sale; and a change to the amount of recognized gain or loss on a transfer of financial assets accounted for as a sale when beneficial interests are received by the transferor. Additionally, the guidance requires extensive new disclosures regarding an entity's involvement in a transfer of financial assets. Finally, existing QSPEs (prior to the effective date of this guidance) must be evaluated for consolidation by reporting entities in accordance with the applicable consolidation guidance upon the elimination of this concept. We adopted this new guidance on January 1, 2010. The adoption of this guidance did not have a material impact on our financial statements. See Note 15 for additional information.

Consolidation of variable interest entities - In June 2009, the FASB issued accounting guidance on the consolidation of variable interest entities (VIEs). This new guidance revises previous guidance by eliminating the exemption for QSPEs, by establishing a new approach for determining who should consolidate a VIE and by changing when it is necessary to reassess who should consolidate a VIE. We adopted this new guidance on January 1, 2010. The adoption of this guidance resulted in the consolidation of QSPEs related to Cat Financial's asset-backed securitization program that were previously not recorded on our consolidated financial statements. The adoption of this guidance did not have a material impact on our financial statements. See Note 15 for additional information.

3. Stock-Based Compensation

Accounting for stock-based compensation requires that the cost resulting from all stock-based payments be recognized in the financial statements based on the grant date fair value of the award. Stock-based compensation primarily consists of stock-settled stock appreciation rights (SARs), restricted stock units (RSUs) and stock options. We recognized pretax stock-based compensation cost in the amount of \$97 million and \$138 million for the three and six months ended June 30, 2010, respectively; and \$41 million and \$74 million for the three and six months ended June 30, 2009, respectively. Included in the second quarter of 2010 pretax stock-based compensation cost was \$17 million relating to the modification of awards resulting from separations due to the streamlining of our corporate structure as announced in the second quarter.

Edgar Filing: CATERPILLAR INC - Form 10-Q

The following table illustrates the type and fair value of the stock-based compensation awards granted during the six month periods ended June 30, 2010 and 2009, respectively:

	2010			2009		
	# Granted		Fair Value Per Award	# Granted		Fair Value Per Award
SARs	7,125,210		\$22.31	6,260,647		\$7.10
RSUs	1,711,771		53.35	2,185,674		20.22
Stock options	431,271		22.31	562,580		7.10

The stock price on the date of grant was \$57.85 and \$22.17 for 2010 and 2009, respectively.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Table of Contents

The following table provides the assumptions used in determining the fair value of the stock-based awards for the six month periods ended June 30, 2010 and 2009, respectively:

	Grant Year		
	2010		2009
Weighted-average dividend yield	2.32%		3.07%
Weighted-average volatility	36.4%		36.0%
Range of volatilities	35.2-51.8%		35.8-61.0%
Range of risk-free interest rates	0.32-3.61%		0.17-2.99%
Weighted-average expected lives	7 years		8 years

As of June 30, 2010, the total remaining unrecognized compensation cost related to nonvested stock-based compensation awards was \$224 million, which will be amortized over the weighted-average remaining requisite service periods of approximately 2.3 years.

4. Derivative Financial Instruments and Risk Management

Our earnings and cash flow are subject to fluctuations due to changes in foreign currency exchange rates, interest rates and commodity prices. In addition, the amount of Caterpillar stock that can be repurchased under our stock repurchase program is impacted by movements in the price of the stock. Our Risk Management Policy (policy) allows for the use of derivative financial instruments to prudently manage foreign currency exchange rate, interest rate, commodity price and Caterpillar stock price exposures. Our policy specifies that derivatives are not to be used for speculative purposes. Derivatives that we use are primarily foreign currency forward and option contracts, interest rate swaps, commodity forward and option contracts, and stock repurchase contracts. Our derivative activities are subject to the management, direction and control of our senior financial officers. Risk management practices, including the use of financial derivative instruments, are presented to the Audit Committee of the Board of Directors at least annually.

All derivatives are recognized on the Consolidated Statement of Financial Position at their fair value. On the date the derivative contract is entered, we designate the derivative as (1) a hedge of the fair value of a recognized asset or liability (fair value hedge), (2) a hedge of a forecasted transaction or the variability of cash flow to be paid (cash flow hedge), or (3) an undesignated instrument. Changes in the fair value of a derivative that is qualified, designated and highly effective as a fair value hedge, along with the gain or loss on the hedged asset or liability that is attributable to the hedged risk, are recorded in current earnings. Changes in the fair value of a derivative that is qualified, designated and highly effective as a cash flow hedge are recorded in Accumulated other comprehensive income (loss) (AOCI) on the Consolidated Statement of Financial Position until they are reclassified to earnings in the same period or periods during which the hedged transaction affects earnings. Changes in the fair value of undesignated derivative instruments and the ineffective portion of designated derivative instruments are reported in current earnings. Cash flow from designated derivative financial instruments are classified within the same category as the item being hedged on the Consolidated Statement of Cash Flow. Cash flow from undesignated derivative financial instruments are included in the investing category on the Consolidated Statement of Cash Flow.

We formally document all relationships between hedging instruments and hedged items, as well as the risk-management objective and strategy for undertaking various hedge transactions. This process includes linking all derivatives that are designated as fair value hedges to specific assets and liabilities on the Consolidated Statement of Financial Position and linking cash flow hedges to specific forecasted transactions or variability of cash flow.

We also formally assess, both at the hedge's inception and on an ongoing basis, whether the designated derivatives that are used in hedging transactions are highly effective in offsetting changes in fair values or cash flow of hedged items. When a derivative is determined not to be highly effective as a hedge or the underlying hedged transaction is no longer probable, we discontinue hedge accounting prospectively, in accordance with the derecognition criteria for hedge accounting.

Foreign Currency Exchange Rate Risk

Foreign currency exchange rate movements create a degree of risk by affecting the U.S. dollar value of sales made and costs incurred in foreign currencies. Movements in foreign currency rates also affect our competitive position as these changes may affect business practices and/or pricing strategies of non-U.S.-based competitors. Additionally, we have balance sheet positions denominated in foreign currencies, thereby creating exposure to movements in exchange rates.

Our Machinery and Engines operations purchase, manufacture and sell products in many locations around the world. As we have a diversified revenue and cost base, we manage our future foreign currency cash flow exposure on a net basis. We use

Table of Contents

foreign currency forward and option contracts to manage unmatched foreign currency cash inflow and outflow. Our objective is to minimize the risk of exchange rate movements that would reduce the U.S. dollar value of our foreign currency cash flow. Our policy allows for managing anticipated foreign currency cash flow for up to five years.

We generally designate as cash flow hedges at inception of the contract any Australian dollar, Brazilian real, British pound, Canadian dollar, Chinese yuan, euro, Japanese yen, Mexican peso, Singapore dollar or Swiss franc forward or option contracts that meet the requirements for hedge accounting and the maturity extends beyond the current quarter-end. Designation is performed on a specific exposure basis to support hedge accounting. The remainder of Machinery and Engines foreign currency contracts are undesignated, including any hedges designed to protect our competitive exposure. Periodically we also designate as fair value hedges specific euro forward contracts used to hedge firm commitments.

As of June 30, 2010, \$27 million of deferred net gains, net of tax, included in equity (Accumulated other comprehensive income (loss) in the Consolidated Statement of Financial Position), are expected to be reclassified to current earnings (Other income (expense) in the Consolidated Statement of Results of Operations) over the next twelve months when earnings are affected by the hedged transactions. The actual amount recorded in Other income (expense) will vary based on exchange rates at the time the hedged transactions impact earnings.

In managing foreign currency risk for our Financial Products operations, our objective is to minimize earnings volatility resulting from conversion and the remeasurement of net foreign currency balance sheet positions. Our policy allows the use of foreign currency forward and option contracts to offset the risk of currency mismatch between our receivables and debt. All such foreign currency forward and option contracts are undesignated.

Interest Rate Risk

Interest rate movements create a degree of risk by affecting the amount of our interest payments and the value of our fixed-rate debt. Our practice is to use interest rate derivatives to manage our exposure to interest rate changes and, in some cases, lower the cost of borrowed funds.

Machinery and Engines operations generally use fixed-rate debt as a source of funding. Our objective is to minimize the cost of borrowed funds. Our policy allows us to enter into fixed-to-floating interest rate swaps and forward rate agreements to meet that objective with the intent to designate as fair value hedges at inception of the contract all fixed-to-floating interest rate swaps. Designation as a hedge of the fair value of our fixed-rate debt is performed to support hedge accounting.

Financial Products operations have a match-funding policy that addresses interest rate risk by aligning the interest rate profile (fixed or floating rate) of Cat Financial's debt portfolio with the interest rate profile of their receivables portfolio within predetermined ranges on an ongoing basis. In connection with that policy, we use interest rate derivative instruments to modify the debt structure to match assets within the receivables portfolio. This matched funding reduces the volatility of margins between interest-bearing assets and interest-bearing liabilities, regardless of which direction interest rates move.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Our policy allows us to use fixed-to-floating, floating-to-fixed, and floating-to-floating interest rate swaps to meet the match-funding objective. We designate fixed-to-floating interest rate swaps as fair value hedges to protect debt against changes in fair value due to changes in the benchmark interest rate. We designate most floating-to-fixed interest rate swaps as cash flow hedges to protect against the variability of cash flows due to changes in the benchmark interest rate.

As of June 30, 2010, \$20 million of deferred net losses, net of tax, included in equity (Accumulated other comprehensive income (loss) in the Consolidated Statement of Financial Position), related to Financial Products floating-to-fixed interest rate swaps, are expected to be reclassified to current earnings (Interest expense of Financial Products in the Consolidated Statement of Results of Operations) over the next twelve months. The actual amount recorded in Interest expense of Financial Products will vary based on interest rates at the time the hedged transactions impact earnings.

We have, at certain times, liquidated fixed-to-floating and floating-to-fixed interest rate swaps at both Machinery and Engines and Financial Products. The gains or losses associated with these swaps at the time of liquidation are amortized into earnings over the original term of the underlying hedged item.

Commodity Price Risk

Commodity price movements create a degree of risk by affecting the price we must pay for certain raw material. Our policy is to use commodity forward and option contracts to manage the commodity risk and reduce the cost of purchased materials.

Table of Contents

Our Machinery and Engines operations purchase aluminum, copper, lead, nickel and rolled coil steel embedded in the components we purchase from suppliers. Our suppliers pass on to us price changes in the commodity portion of the component cost. In addition, we are also subject to price changes on natural gas and diesel fuel purchased for operational use.

Our objective is to minimize volatility in the price of these commodities. Our policy allows us to enter into commodity forward and option contracts to lock in the purchase price of a portion of these commodities within a five-year horizon. All such commodity forward and option contracts are undesignated.

The location and fair value of derivative instruments reported in the Consolidated Statement of Financial Position are as follows:

(Millions of dollars)	Statement of Financial Position Location	Asset (Liability) Fair Value

Stock Repurchase Risk

Payments for stock repurchase derivatives are accounted for as a reduction in stockholders' equity. In February 2007, the Board of Directors authorized a \$7.5 billion stock repurchase program, expiring on December 31, 2011. The amount of Caterpillar stock that can be repurchased under the authorization is impacted by movements in the price of the stock. In August 2007, the Board of Directors authorized the use of derivative contracts to reduce stock repurchase price volatility. There were no stock repurchase derivatives outstanding for the three and six months ended June 30, 2010 or 2009.

5. Inventories

Inventories (principally using the last-in, first-out (LIFO) method) are comprised of the following:

(Millions of dollars)	June 30,	December 31, 2009
-----------------------	----------	----------------------

Edgar Filing: CATERPILLAR INC - Form 10-Q

	2010	
Raw materials	\$2,232	\$1,979
Work-in-process	976	656
Finished goods	3,899	3,465
Supplies	232	260
Total inventories	\$7,339	\$6,360

Inventory quantities were reduced during the six months ended June 30, 2009. This reduction resulted in a liquidation of LIFO inventory layers carried at lower costs prevailing in prior years as compared with current costs. The effect of this reduction of inventory that was not expected to be replaced by the end of 2009 decreased Cost of goods sold in the Consolidated Results of Operations by approximately \$110 million and increased Profit by approximately \$85 million or \$0.14 per share for the three and six months ended June 30, 2009. There were no LIFO inventory liquidations during the three and six months ended June 30, 2010.

Table of Contents**6. Investments in Unconsolidated Affiliated Companies**

Combined financial information of the unconsolidated affiliated companies accounted for by the equity method (generally on a lag of 3 months or less) was as follows:

Other	11	130	(54)	76
Total intangible assets	15	\$737	\$(272)	\$465

Table of Contents

During the second quarter of 2010, we acquired finite-lived intangible assets of \$10 million due to the purchase of FCM Rail Ltd. (FCM) and also acquired finite-lived intangible assets of \$6 million from other acquisitions. During the first quarter of 2010, we acquired finite-lived intangible assets of \$28 million due to the purchase of GE Transportation's Inspection Products business and also acquired finite-lived intangible assets of \$12 million due to the purchase of JCS Company, Ltd. (JCS). See Note 19 for details on these business combinations.

Amortization expense for the three and six months ended June 30, 2010 was \$17 million and \$32 million, respectively. Amortization expense for the three and six months ended June 30, 2009 was \$13 million and \$31 million, respectively. Amortization expense related to intangible assets is expected to be:

(Millions of dollars)					
2010	2011	2012	2013	2014	Thereafter
\$66	\$60	\$55	\$47	\$45	\$244

B. Goodwill

During the second quarter of 2010, we acquired net assets with related goodwill of \$16 million as part of the purchase of FCM. During the first quarter of 2010, we acquired net assets with related goodwill of \$14 million as part of the purchase of GE Transportation's Inspection Products business and also acquired net assets with related goodwill of \$8 million as part of the purchase of JCS. See Note 19 for details on the acquisition of these assets.

We test goodwill for impairment annually and whenever events or circumstances make it more likely than not that an impairment may have occurred. We perform our annual goodwill impairment test as of October 1 and monitor for interim triggering events on an ongoing basis. Goodwill is reviewed for impairment utilizing a two-step process. The first step requires us to compare the fair value of each reporting unit, which we primarily determine using an income approach based on the present value of discounted cash flows, to the respective carrying value, which includes goodwill. If the fair value of the reporting unit exceeds its carrying value, the goodwill is not considered impaired. If the carrying value is greater than the fair value, there is an indication that an impairment may exist and the second step is required. In step two, the implied fair value of goodwill is calculated as the excess of the fair value of a reporting unit over the fair values assigned to its assets and liabilities. If the implied fair value of goodwill is less than the carrying value of the reporting unit's goodwill, the difference is recognized as an impairment loss.

No goodwill was impaired or disposed of during the three and six months ended June 30, 2010 or 2009.

The changes in the carrying amount of the goodwill by reportable segment for the six months ended June 30, 2010 were as follows:

(Millions of dollars)

Balance at December 31, 2009	Business combinations	Other adjustments ¹	Balance at June 30, 2010

Table of Contents**8. Available-For-Sale Securities**

We have investments in certain debt and equity securities, primarily at Cat Insurance, that have been classified as available-for-sale and recorded at fair value based upon quoted market prices. These fair values are primarily included in Other assets in the Consolidated Statement of Financial Position. Unrealized gains and losses arising from the revaluation of available-for-sale securities are included, net of applicable deferred income taxes, in equity (Accumulated other comprehensive income (loss) in the Consolidated Statement of Financial Position). Realized gains and losses on sales of investments are generally determined using the FIFO (first-in, first-out) method for debt instruments and the specific identification method for equity securities. Realized gains and losses are included in Other income (expense) in the Consolidated Statement of Results of Operations.

Effective April 1, 2009, we adopted the accounting and disclosure requirements regarding recognition and presentation of other-than-temporary impairments. See Note 2 for additional information.

(Millions of dollars)	June 30, 2010			December 31, 2009		
	Cost	Unrealized Pretax Net Gains (Losses)	Fair Value	Cost Basis	Unrealized Pretax Net Gains (Losses)	Fair Value

Smaller company growth	21	4	25	19	5	24
Total	\$1,285	\$47	\$1,332	\$1,301	\$21	\$1,322

During the three months ended June 30, 2009, there were no charges for other-than-temporary declines in the market value of securities. During the six months ended June 30, 2009, we recognized pretax charges for other-than-temporary declines in the market values of equity securities in the Cat Insurance investment portfolios of \$11 million. During the three and six months ended June 30, 2010, charges for other-than-temporary declines in the market value of securities were \$1 million. These charges were accounted for as realized losses and were included in Other income (expense) in the Consolidated Statement of Results of Operations. The cost basis of the impacted securities was adjusted to reflect these charges.

Table of Contents**Investments in an unrealized loss position that are not other-than-temporarily impaired:**

(Millions of dollars)	Less than 12 months 1		June 30, 2010 12 months or more 1		Total

-------	------	-----	-------	------	-------	------

1 Indicates length of time that individual securities have been in a continuous unrealized loss position.

Government Debt. The unrealized losses on our investments in other U.S. and non-U.S. government bonds are the result of changes in interest rates since time of purchase. We do not intend to sell the investments and it is not likely that we will be required to sell these investments before recovery of their amortized cost basis. We do not consider these investments to be other-than-temporarily impaired as of June 30, 2010.

Corporate Bonds. The unrealized losses on our investments in corporate bonds and asset-backed securities relate primarily to an increase in credit-related yield spreads, risk aversion and continued volatility in the financial markets since initial

Table of Contents

purchase. We do not intend to sell the investments and it is not likely that we will be required to sell the investments before recovery of their amortized cost basis. We do not consider these investments to be other-than-temporarily impaired as of June 30, 2010.

Mortgage-Backed Debt Securities. The unrealized losses on our investments in mortgage-backed securities relate primarily to elevated housing delinquencies and default rates, credit-related yield spreads and continued risk aversion. Continued weakness and lack of liquidity in the commercial sector continue to impact valuations. We do not intend to sell the investments and it is not likely that we will be required to sell these investments before recovery of their amortized cost basis. We do not consider these investments to be other-than-temporarily impaired as of June 30, 2010.

Equity Securities. Cat Insurance maintains a well-diversified equity portfolio consisting of two specific mandates: large capitalization value stocks and smaller company growth stocks. Despite indications of an improving U.S. economy, equity valuations continued to fluctuate as weak labor conditions continue to dampen the market's recovery. In each case where unrealized losses exist, the respective company's management is taking corrective action to increase shareholder value. We do not consider these investments to be other-than-temporarily impaired as of June 30, 2010.

The fair value of the available-for-sale debt securities at June 30, 2010, by contractual maturity, is shown below. Expected maturities will differ from contractual maturities because borrowers may have the right to prepay and creditors may have the right to call obligations.

(Millions of dollars)	<u>Fair Value</u>
Due in one year or less	\$63
Due after one year through five years	\$420
Due after five years through ten years	\$224
Due after ten years	\$508

Proceeds from sale of available-for-sale securities during the three and six months ended June 30, 2010 were \$45 million and \$90 million, respectively. Proceeds from sale of available-for-sale securities during the three and six months ended June 30, 2009 were \$83 million and \$170 million, respectively. Gross gains of \$1 million were included in current earnings for the three and six months ended June 30, 2010. There were no gross losses for the three or six months ended June 30, 2010. There were no gross gains or losses for the three months ended June 30, 2009. Gross gains of \$1 million and gross losses of \$7 million were included in current earnings for the six months ended June 30, 2009.

9. Postretirement Benefits

A. Pension and postretirement benefit costs

As discussed in Note 18, during 2009 voluntary and involuntary separation programs impacted employees participating in certain U.S. and non-U.S. pension and other postretirement benefit plans. Due to the significance of these events, certain plans were re-measured as follows:

U.S. Separation Programs Plan re-measurements as of January 31, 2009, March 31, 2009 and December 31, 2009 resulted in net curtailment losses of \$127 million to pension and \$55 million to other postretirement benefit plans. Early retirement pension benefit costs of \$6 million were also recognized.

Non-U.S. Separation Programs Certain plans were re-measured as of March 31, 2009 and December 31, 2009, resulting in pension settlement losses of \$34 million, special termination benefits of \$2 million to pension and curtailment losses of \$1 million to other postretirement benefit plans.

The \$225 million of curtailment, settlement and special termination benefit expense for 2009 associated with certain pension and other postretirement benefit plans was reported in Other operating (income) expense in the Consolidated Statement of Results of Operations. This includes \$201 million reported for the six months ended June 30, 2009. There was no curtailment, settlement and special termination benefit expense for the three months ended June 30, 2009.

In March 2009, we amended our U.S. support and management other postretirement benefit plan. Beginning in 2010, certain retirees age 65 and older will enroll in individual health plans that work with Medicare and will no longer participate in a Caterpillar-sponsored group health plan. In addition, Caterpillar will fund a tax-advantaged Health Reimbursement Arrangement (HRA) to assist the retirees with medical expenses. The plan amendment required a plan re-measurement as of

Table of Contents

March 31, 2009, which resulted in a decrease in our Liability for postretirement benefits of \$432 million and an increase in Accumulated other comprehensive income (loss) of \$272 million net of tax. The plan was further amended in December 2009 to define the HRA benefit that active employees will receive once they are retired and reach age 65. The plan was re-measured at year-end 2009 and the December amendment resulted in a decrease in our Liability for postretirement benefits of \$101 million and an increase in Accumulated other comprehensive income (loss) of \$64 million net of tax. These decreases will be amortized into earnings on a straight-line basis over approximately 7 years, the average remaining service period of active employees in the plan. The amendments reduced other postretirement benefits expense by approximately \$28 million and \$55 million for the three and six months ended June 30, 2010 and reduced expense by approximately \$20 million for the three and six months ended June 30, 2009.

The re-measurements did not have a material impact on our benefit obligations, plan assets or funded status for the three and six months ended June 30, 2009. There were no re-measurements during the three and six months ended June 30, 2010.

In March 2010, the Patient Protection and Affordable Care Act (the PPACA) and the Health Care and Education Reconciliation Act of 2010 (H.R. 4872) which amends certain provisions of the PPACA were signed into law. As discussed in Note 13, the Medicare Part D retiree drug subsidies effectively become taxable beginning in 2013.

(Millions of dollars)	U.S. Pension		Non-U.S. Pension		Other Postretirement	
	Benefits		Benefits		Benefits	
	June 30,		June 30,		June 30,	
	2010	2009	2010	2009	2010	2009
For the three months ended:						
Components of net periodic benefit cost:						
Service cost	\$48	\$43	\$23	\$20	\$17	\$18
Interest cost	167	172	40	34	61	69
Expected return on plan assets	(190)	(193)	(49)	(43)	(23)	(27)
Amortization of:						
Transition obligation (asset)						1
Prior service cost (credit) 1	7	7			(13)	(14)
Net actuarial loss (gain)	87	63	17	9	8	5
Net periodic benefit cost	119	92	31	20	50	52
Curtailments, settlements and special termination benefits 2			4			
Total cost included in operating profit	\$119	\$92	\$35	\$20	\$50	\$52
For the six months ended:						
Components of net periodic benefit cost:						
Service cost	\$97	\$92	\$46	\$44	\$33	\$36
Interest cost	333	342	82	70	122	143
Expected return on plan assets	(381)	(391)	(98)	(86)	(46)	(59)
Amortization of:						
Transition obligation (asset)					1	1
Prior service cost (credit) 1	14	14			(27)	(13)
Net actuarial loss (gain)	175	123	34	22	16	10
Net periodic benefit cost	238	180	64	50	99	118
Curtailments, settlements and special termination benefits 2		130	8	9		62
Total cost included in operating profit	\$238	\$310	\$72	\$59	\$99	\$180
Weighted-average assumptions used to determine net cost:						
Discount rate	5.7%	6.3%	4.8%	4.6%	5.6%	6.2%
Expected return on plan assets	8.5%	8.5%	7.0%	6.6%	8.5%	8.5%
Rate of compensation increase	4.5%	4.5%	4.2%	3.7%	4.4%	4.4%

1 Prior service costs for both pension and other postretirement benefits are generally amortized using the straight-line method over the average remaining service period to the full retirement eligibility date of employees expected to receive benefits from the plan amendment. For other postretirement benefit plans in which all or almost all of the plan's participants are fully eligible for benefits under the plan, prior service costs are amortized using the straight-line method over the remaining life expectancy of those participants.

2 Curtailments, settlements and special termination benefits were recognized in Other operating (income) expenses in the Consolidated Statement of Results of Operations.

Table of Contents

We made \$300 million and \$548 million of contributions to our U.S. and non-U.S. pension plans during the three and six months ended June 30, 2010, respectively. We currently anticipate additional contributions of approximately \$450 million during the remainder of the year, most of which are voluntary contributions. We made \$895 million and \$953 million of contributions to our U.S. and non-U.S. pension plans during the three and six months ended June 30, 2009, respectively. Our second-quarter 2009 contribution included a voluntary contribution to our U.S. plans of 18.2 million shares (\$650 million) in Caterpillar stock, held as treasury stock.

B. Defined contribution benefit costs

Beginning in June 2009, we began funding our employer matching contribution for certain U.S. defined contribution plans in Caterpillar stock, held as treasury stock. For the three and six months ended June 30, 2010, we have made \$33 million (0.5 million shares) and \$62 million (1 million shares) of matching contributions in Caterpillar stock, respectively. For the three months ended June 30, 2009, we made \$9 million (0.2 million shares) of matching contributions in Caterpillar stock.

Total company costs related to U.S. and non-U.S. defined contribution plans were as follows:

(Millions of dollars)	Three Months Ended June 30,		Six Months Ended June 30,	
	2010	2009	2010	2009
U.S. Plans	\$35	\$55	\$83	\$94
Non-U.S. Plans	9	6	16	15
	\$44	\$61	\$99	\$109

10. Guarantees and Product Warranty

We have provided an indemnity to a third-party insurance company for potential losses related to performance bonds issued on behalf of Caterpillar dealers. The bonds are issued to insure governmental agencies against nonperformance by certain dealers. We also provided guarantees to a third party related to the performance of contractual obligations by certain Caterpillar dealers. The guarantees cover potential financial losses incurred by the third party resulting from the dealers' nonperformance.

We provide loan guarantees to third-party lenders for financing associated with machinery purchased by customers. These guarantees have varying terms and are secured by the machinery. In addition, Cat Financial participates in standby letters of credit issued to third parties on behalf of their customers. These standby letters of credit have varying terms and beneficiaries and are secured by customer assets.

Cat Financial has provided a limited indemnity to a third-party bank resulting from the assignment of certain leases to that bank. The indemnity is for the possibility that the insurers of these leases would become insolvent. The indemnity expires December 15, 2012 and is unsecured.

Edgar Filing: CATERPILLAR INC - Form 10-Q

No loss has been experienced or is anticipated under any of these guarantees. At June 30, 2010 and December 31, 2009, the related liability was \$17 million. The maximum potential amount of future payments (undiscounted and without reduction for any amounts that may possibly be recovered under recourse or collateralized provisions) we could be required to make under the guarantees are as follows:

(Millions of dollars)	June 30, 2010	December 31, 2009
Guarantees with Caterpillar dealers	\$321	\$313
Guarantees with customers	178	193
Limited indemnity	18	20
Guarantees other	47	64
Total guarantees	\$564	\$590

We provide guarantees to repurchase certain loans of Caterpillar dealers from a financial trust (Trust) that qualifies as a variable interest entity. The purpose of the Trust is to provide short-term working capital loans to Caterpillar dealers. This Trust issues commercial paper and uses the proceeds to fund its loan program. We have a loan purchase agreement with the Trust that obligates us to purchase certain loans that are not paid at maturity. We receive a fee for providing this guarantee, which provides a source of liquidity for the Trust. We are the primary beneficiary of the Trust as our guarantees result in Cat

Table of Contents

Financial having both the power to direct the activities that most significantly impact the Trust's economic performance and the obligation to absorb losses, and therefore we have consolidated the financial statements of the Trust. As of June 30, 2010 and December 31, 2009, the Trust's assets of \$330 million and \$231 million, respectively, are primarily comprised of loans to dealers and the Trust's liabilities of \$330 million and \$231 million, respectively are primarily comprised of commercial paper. No loss has been experienced or is anticipated under this loan purchase agreement. Our assets are not available to pay creditors of the Trust, except to the extent we may be obligated to perform under the guarantee, and assets of the Trust are not available to pay our creditors.

Our product warranty liability is determined by applying historical claim rate experience to the current field population and dealer inventory. Generally, historical claim rates are based on actual warranty experience for each product by machine model/engine size. Specific rates are developed for each product build month and are updated monthly based on actual warranty claim experience. The 2009 provision included approximately \$181 million for changes in estimates for pre-existing warranties due to higher than expected actual warranty claim experience.

(Millions of dollars)	2010
Warranty liability, January 1	\$1,049
Reduction in liability (payments)	(426)
Increase in liability (new warranties)	278
Warranty liability, June 30	\$901

(Millions of dollars)	2009
Warranty liability, January 1	\$1,201
Reduction in liability (payments)	(1,032)
Increase in liability (new warranties)	880
Warranty liability, December 31	\$1,049

11. Computations of Profit Per Share

(Dollars in millions except per share data)		Three Months Ended June 30,		Six Months Ended June 30,	
		2010	2009	2010	2009
I.	Profit (loss) for the period (A)1:	\$707	\$371	\$940	\$259
II.	Determination of shares (in millions):				
	Weighted-average number of common shares outstanding (B)	629.8	611.8	628.1	607.6
	Shares issuable on exercise of stock awards, net of shares assumed to be purchased out of proceeds at average market price	17.2	8.0	17.1	6.4
	Average common shares outstanding for fully diluted computation (C)	647.0	619.8	645.2	614.0
III.	Profit (loss) per share of common stock:				
	Assuming no dilution (A/B)	\$1.12	\$0.61	\$1.50	\$0.43
	Assuming full dilution (A/C)	\$1.09	\$0.60	\$1.46	\$0.42

1 Profit (loss) attributable to common stockholders.

SARs and stock options to purchase 12,465,174 and 25,871,262 common shares were outstanding for the three and six months ended June 30, 2010, respectively, but were not included in the computation of diluted earnings per share because the effect would have been anti-dilutive. For the three and six months ended June 30, 2009, there were outstanding SARs and stock options to purchase 29,040,001 and 41,376,879 common shares, respectively, but were not included in the computation of diluted earnings per share because the effect would have been anti-dilutive.

12. Environmental and Legal Matters

The company is regulated by federal, state and international environmental laws governing our use, transport and disposal of substances and control of emissions. In addition to governing our manufacturing and other operations, these laws often impact the development of our products, including, but not limited to, required compliance with air emissions standards applicable to internal combustion engines. Compliance with these existing laws has not had a material impact on our capital expenditures, earnings or global competitive position.

Table of Contents

We are engaged in remedial activities at a number of locations, often with other companies, pursuant to federal and state laws. When it is probable we will pay remedial costs at a site and those costs can be reasonably estimated, the costs are charged against our earnings. In formulating that estimate, we do not consider amounts expected to be recovered from insurance companies or others. The amount recorded for environmental remediation is not material and is included in Accrued expenses in the Consolidated Statement of Financial Position.

We cannot reasonably estimate costs at sites in the very early stages of remediation. Currently, we have a few sites in the very early stages of remediation, and there is no more than a remote chance that a material amount for remedial activities at any individual site, or at all sites in the aggregate, will be required.

We have disclosed certain individual legal proceedings in this filing. Additionally, we are involved in other unresolved legal actions that arise in the normal course of business. The most prevalent of these unresolved actions involve disputes related to product design, manufacture and performance liability (including claimed asbestos and welding fumes exposure), contracts, employment issues, environmental matters or intellectual property rights. Although it is not possible to predict with certainty the outcome of these unresolved legal actions, we believe that these actions will not individually or in the aggregate have a material adverse effect on our consolidated results of operations, financial position or liquidity.

On May 14, 2007, the U.S. Environmental Protection Agency (EPA) issued a Notice of Violation to Caterpillar Inc., alleging various violations of Clean Air Act Sections 203, 206 and 207. EPA claims that Caterpillar violated such sections by shipping engines and catalytic converter after-treatment devices separately, introducing into commerce a number of uncertified and/or misbuilt engines, and failing to timely report emissions-related defects. Caterpillar is currently engaged in negotiations with EPA and the U.S. Department of Justice to resolve these issues. On July 9, 2010, the Department of Justice issued a penalty demand to Caterpillar seeking a civil penalty of \$3.2 million and implementation of injunctive relief involving expanded use of certain technologies. Caterpillar continues to cooperate with EPA and the Department of Justice and, while penalties will likely exceed \$100,000, management does not believe that this issue will have a material adverse impact on our consolidated results of operations, financial position or liquidity.

On February 8, 2009, an incident at Caterpillar's Joliet, Illinois facility resulted in the release of approximately 3,000 gallons of wastewater into the Des Plaines River. In coordination with state and federal authorities, appropriate remediation measures have been taken. On February 23, 2009, the Illinois Attorney General filed a Complaint in Will County Circuit Court containing seven counts of violations of state environmental laws and regulations. Each count seeks injunctive relief, as well as statutory penalties of \$50,000 per violation and \$10,000 per day of violation. In addition, on March 5, 2009, the EPA served Caterpillar with a Notice of Intent to file a Civil Administrative Action (notice), indicating the EPA's intent to seek civil penalties for violations of the Clean Water Act and Oil Pollution Act. On January 25, 2010, the EPA issued a revised notice seeking civil penalties in the amount of \$167,800, and Caterpillar responded to the revised notice and is engaged in follow up discussions with the EPA. On March 8, 2010, the Illinois Attorney General submitted a demand to Caterpillar seeking a \$100,000 civil penalty. At this time, we do not believe these proceedings will have a material adverse impact on our consolidated results of operations, financial position or liquidity.

13. Income Taxes

The provision for income taxes for the first six months of 2010 reflects an estimated annual effective tax rate of 29 percent, excluding the discrete items discussed below, compared to a discrete period effective tax rate of negative 20.5 percent for the first six months of 2009. The 2010 estimated annual tax rate is expected to be less than the U.S. tax rate of 35 percent primarily due to profits in tax jurisdictions with rates lower than the U.S. rate. The 2010 estimated annual tax rate is based on current tax law and therefore does not include the U.S. research and

Edgar Filing: CATERPILLAR INC - Form 10-Q

development tax credit and other benefits that have not been extended past 2009. A discrete calculation was used to report the tax benefit for the first six months of 2009 rather than an estimated annual tax rate as the estimated range of annual profit/(loss) before tax produced significant variability and made it difficult to reasonably estimate the 2009 annual effective tax rate.

The provision for income taxes for 2010 also includes a first quarter deferred tax charge of \$90 million due to the enactment of U.S. healthcare legislation effectively making government subsidies received for Medicare equivalent prescription drug coverage taxable. Guidance on accounting for income taxes requires that the deferred tax effects of changes in laws be reflected in the financial statements in the period in which the legislation is enacted regardless of the effective date. Deferred tax assets had previously been recorded based on the liability for other postretirement benefits without regard to the tax-free subsidy. As a result of the law change, deferred tax assets were reduced to reflect the expected future income tax on the subsidy. Beginning in 2013, a cash tax cost will be incurred when the subsidies received increase taxable income.

Table of Contents

This deferred tax charge was offset by a \$34 million benefit related to the recognition of refund claims for prior tax years and a \$26 million benefit for the release of a valuation allowance against the deferred tax assets of certain non-U.S. entities due to tax planning actions implemented in the second quarter of 2010.

The IRS has completed its field examination of our tax returns for 1992 to 2006. For tax years 1992 to 1994, we expect to litigate the unagreed adjustments related to transfer pricing. In 2009, we reached a settlement with the IRS for tax years 1995 to 1999. For tax years 2000 to 2004, we are in the appeals process for unagreed adjustments primarily related to export tax benefits. In the second quarter of 2010, we received notice of proposed adjustments related to tax years 2005 and 2006 and intend to appeal the unagreed adjustments primarily related to export tax benefits. In the opinion of management, the ultimate disposition of these matters will not have a material adverse effect on our consolidated financial position, liquidity or results of operations.

14. Segment Information

A. Basis for segment information

Caterpillar is organized based on a decentralized structure that has established responsibilities to continually improve business focus and increase our ability to react quickly to changes in the global business cycle, customer needs and competitors' actions. Our current structure uses a matrix organization comprised of multiple profit and cost center divisions.

Our divisional structure and responsibilities are as follows:

- Machine business divisions are profit centers primarily responsible for product management, development, marketing, sales and product support. Machine business divisions also have select manufacturing responsibilities. Inter-segment sales of components are a source of revenue for some of these divisions.
- Engine business divisions are profit centers primarily responsible for product management, development, manufacturing, marketing, sales and product support. Inter-segment sales of engines and/or components are a source of revenue for some of these divisions.
- Component business divisions are profit centers primarily responsible for product management, development, manufacturing, marketing, sales and product support for internal and external customers. Inter-segment sales of components are a source of revenue for these divisions.
- Service business divisions are profit centers primarily responsible for various services and service-related products to customers including financial, logistics, remanufacturing and rail services. Inter-segment sales of services and service-related products are a source of revenue for some of these divisions.
- Manufacturing services divisions are cost centers primarily responsible for the manufacture of products and/or components within the geographic regions of the Americas and EAME.
- Corporate services divisions are cost centers primarily responsible for the performance of certain support functions globally (e.g., Finance, Human Resources, Information Technology, Legal and Purchasing) and to provide centralized services.
- Regional distribution services divisions are cost centers primarily responsible for the total portfolio of business with each dealer, the dealer relationship, dealer development and ensuring the most efficient and effective distribution of machines, engines and parts.
- Centers of excellence divisions are cost centers primarily responsible for Caterpillar's most critical/differentiating processes in the areas of Marketing and Product Support, Production and Product Development.

Edgar Filing: CATERPILLAR INC - Form 10-Q

The segment information for 2009 has been retrospectively adjusted to conform to the 2010 presentation. Core Components, formerly included in the all other category, is now a reportable segment. The portion of postretirement benefit expense (\$89 million and \$178 million for the three and six months ended June 30, 2009, respectively) that was allocated to Machinery and Engines business divisions based on budgeted external and inter-segment sales, is now a methodology difference between segment and external reporting.

Our measurement system is complex and is designed to evaluate performance and to drive continuous improvement. We have chosen to disclose financial results by our three principal lines of business (Machinery, Engines and Financial Products) in our Management's Discussion and Analysis rather than by reportable segment based on the following:

- Our Machinery and Engines businesses are vertically integrated and there are a significant amount of inter-segment transactions that make information for individual segments less meaningful.
- A significant amount of corporate and other costs (\$222 million and \$415 million for the three and six months ended June 30, 2010, respectively, and \$256 million and \$509 million for the three and six months ended June 30, 2009, respectively) are allocated to Machinery and Engines business divisions based on budgeted external and inter-

Table of Contents

segment sales. It would be difficult to provide meaningful information by reportable segment for these costs as the allocation method does not directly reflect the benefited segment and the allocation is done in total, not by financial statement line item. In addition, the budgeted amount is allocated to segments; any differences from budget are treated as a reconciling item between reportable segment and consolidated results.

- As discussed below, there are various methodology differences between our segment reporting and U.S. GAAP. This results in numerous reconciling items between reportable segment and consolidated results.
- We have twenty-four operating segments, of which twelve are reportable segments. Reporting financial information for this number of businesses, especially considering our level of vertical integration, would not be meaningful to our financial statement users.

In summary, due to Caterpillar's high level of integration and our concern that segment disclosures have limited value for our external readers, we are continuing to disclose financial results for our three principal lines of business (Machinery, Engines and Financial Products) in our Management's Discussion and Analysis beginning on page 43.

B. Description of segments

Profit center divisions meet the definition of operating segments specified in the accounting guidance on segment reporting; however, the cost center divisions do not. Following is a brief description of our twelve reportable segments and the business activities included in all other operating segments:

Building Construction Products: A machine business division primarily responsible for the product management, development, manufacture, marketing, sales and product support of light construction machines and select work tools.

Cat Japan: A business division primarily responsible for the development of small, medium and large hydraulic excavators, manufacturing of select machinery and components, marketing, sales and product support of machinery, engines and components in Japan. Inter-segment sales of machinery and components are a source of revenue for this division.

Core Components: A component business division primarily responsible for the product management, development, manufacture, marketing and product support of undercarriage, specialty products, hardened barstock components and ground engaging tools. Inter-segment sales of components are a source of revenue for this division.

Earthmoving: A machine business division primarily responsible for the product management, development, marketing, sales and product support of medium wheel loaders, medium track-type tractors, track-type loaders, motor graders and pipelayers. Also responsible for manufacturing of select machines in Asia.

Electric Power: An engine business division primarily responsible for the product management, development, manufacture, marketing, sales and product support of reciprocating engine powered generator sets as well as integrated systems used in the electric power generation industry.

Excavation: A machine business division primarily responsible for the product management, development, marketing, sales and product support of small, medium and large excavators, wheel excavators and articulated trucks. Also responsible for manufacturing of select machines in Asia and articulated trucks.

Large Power Systems: An engine business division primarily responsible for the product management, development, manufacture and product support of reciprocating engines supplied to Caterpillar machinery and the electric power, petroleum, marine and industrial industries. Also responsible for engine component manufacturing. Inter-segment sales of engines and components are a source of revenue for this division.

Logistics: A service business division primarily responsible for logistics services for Caterpillar and other companies.

Marine & Petroleum Power: An engine business division primarily responsible for the product management, development, marketing, sales and product support of reciprocating engines supplied to the marine and petroleum industries. Also responsible for manufacturing of certain reciprocating engines for marine, petroleum and electric power applications.

Mining: A machine business division primarily responsible for the product management, development, marketing, sales and product support of large track-type tractors, large mining trucks, underground mining equipment and tunnel boring equipment. Also responsible for manufacturing of underground mining equipment and tunnel boring equipment. Inter-segment sales of components are a source of revenue for this division.

Turbines: An engine business division primarily responsible for the product management, development, manufacture, marketing, sales and product support of turbines and turbine-related services.

Table of Contents

Financing & Insurance Services: Provides financing to customers and dealers for the purchase and lease of Caterpillar and other equipment, as well as some financing for Caterpillar sales to dealers. Financing plans include operating and finance leases, installment sale contracts, working capital loans and wholesale financing plans. The division also provides various forms of insurance to customers and dealers to help support the purchase and lease of our equipment.

All Other: Primarily includes activities such as: the product management, development, marketing, sales and product support of large wheel loaders, quarry and construction trucks, wheel tractor scrapers, wheel dozers, compactors and select work tools. Also responsible for manufacturing of select machines in Asia; the product management, development, manufacture, marketing, sales and product support of forestry products; the product management, development, manufacture, marketing, sales and product support of reciprocating engines used in industrial applications; the product management, development, manufacture, marketing, sales and product support of machinery and engine components, electronics and control systems; the product management, development, manufacture, remanufacture, maintenance, leasing and service of rail-related products and services; remanufacturing of Caterpillar engines and components and remanufacturing services for other companies; the product management, development, manufacture, marketing, sales and product support of paving products. Inter-segment sales are a source of revenue for some of these divisions. Results for All Other operating segments are included as reconciling items between reportable segments and consolidated external reporting.

C. Segment measurement and reconciliations

There are several methodology differences between our segment reporting and our external reporting. The following is a list of the more significant methodology differences:

- Generally, liabilities are managed at the corporate level and are not included in segment operations. Segment accountable assets generally include inventories, receivables and property, plant and equipment.
- Segment inventories and cost of sales are valued using a current cost methodology.
- Currency exposures are generally managed at the corporate level and the effects of changes in exchange rates on results of operations within the year are not included in segment results. The net difference created in the translation of revenues and costs between exchange rates used for U.S. GAAP reporting and exchange rates used for segment reporting are recorded as a methodology difference.
- Postretirement benefit expenses are split; segments are generally responsible for service and prior service costs, with the remaining elements of net periodic benefit cost included as a methodology difference.
- Interest expense is not included in Machinery and Engines segment results.
- Accountable profit is determined on a pretax basis.

Reconciling items are created based on accounting differences between segment reporting and our consolidated external reporting. Please refer to pages 29 to 34 for financial information regarding significant reconciling items. Most of our reconciling items are self-explanatory given the above explanations. For the reconciliation of profit (loss), we have grouped the reconciling items as follows:

-

Edgar Filing: CATERPILLAR INC - Form 10-Q

Corporate costs: Certain corporate costs are allocated and included in the business division's accountable profit at budgeted levels. Any differences are treated as reconciling items. These costs are related to corporate requirements and strategies that are considered to be for the benefit of the entire organization.

- **Redundancy costs:** Redundancy costs include pension and other postretirement benefit plan curtailments, settlements and special termination benefits as well as employee separation charges. Most of these costs are reconciling items between accountable profit and consolidated profit before tax. Table Reconciliation of Redundancy Costs on pages 31-32 has been included to illustrate how segment accountable profit would have been impacted by the redundancy costs. See Notes 9 and 18 for more information.
- **Methodology differences:** See previous discussion of significant accounting differences between segment reporting and consolidated external reporting.
- **Timing:** Timing differences in the recognition of costs between segment reporting and consolidated external reporting.

15. Securitizations

Cat Financial transfers certain finance receivables relating to retail installment sale contracts and finance leases as part of their asset-backed securitization program. In addition, Cat Financial has sold interests in wholesale receivables to third-party commercial paper conduits. These transactions provide a source of liquidity and allow for better management of their balance sheet capacity.

Securitized Retail Installment Sale Contracts and Finance Leases

Cat Financial periodically transfers certain finance receivables relating to retail installment sale contracts and finance leases to special purpose entities (SPEs) as part of their asset-backed securitization program. The SPEs have limited purposes and generally are only permitted to purchase the finance receivables, issue asset-backed securities and make payments on the securities. The SPEs only issue a single series of securities and generally are dissolved when those securities have been paid in full. The SPEs issue debt to pay for the finance receivables they acquire from Cat Financial. The primary source for repayment of the debt is the cash flows generated from the finance receivables owned by the SPEs. The assets of the SPEs are legally isolated and are not available to pay Cat Financial creditors. Cat Financial retains interests in the securitization transactions, including subordinated certificates issued by the SPEs, rights to cash reserves, and residual interests. For bankruptcy analysis purposes, Cat Financial has sold the finance receivables to the SPEs in a true sale and the SPEs are separate legal entities. The investors and the SPEs have no recourse to any of Cat Financial's other assets for failure of debtors to pay when due.

In accordance with the new consolidation accounting guidance adopted on January 1, 2010, these SPEs were concluded to be VIEs. Cat Financial determined that it was the primary beneficiary based on its power to direct activities through its role as servicer and its obligation to absorb losses and right to receive benefits and therefore consolidated the entities using the carrying amounts of the SPEs' assets and liabilities.

The restricted assets (Receivables-finance, Long-term receivables-finance, Prepaid expenses and other current assets, and Other assets) of these consolidated SPEs totaled \$296 million at June 30, 2010. The liabilities (Accrued expenses, Long-term debt due within one year-Financial Products, and Other liabilities) of these consolidated SPEs totaled \$212 million at June 30, 2010.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Prior to January 1, 2010, the SPEs were considered to be QSPEs and thus not consolidated. Cat Financial's retained interests in the securitized assets were classified as available-for-sale securities and were included in Other assets in the Consolidated Statement of Financial Position at fair value. Cat Financial estimated fair value and cash flows using a valuation model and key assumptions for credit losses, prepayment rates and discount rates. These assumptions were based on Cat Financial's historical experience, market trends and anticipated performance relative to the particular assets securitized. Cat Financial periodically evaluated for impairment and recognized the credit component of an other-than-temporary impairment in Profit and the noncredit component in Accumulated other comprehensive income (loss) for those retained interests in which Cat Financial did not intend to sell and it was not likely that they would be required to sell prior to recovery.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Table of Contents

The fair value of the retained interests in all securitizations of retail finance receivables outstanding totaled \$102 million (cost basis of \$107 million) as of December 31, 2009. The fair value of the retained interests as of December 31, 2009 that have been in a continuous unrealized loss position for twelve months or longer totaled \$102 million (cost basis of \$107 million). Key assumptions used to determine the fair value of the retained interests as of December 31, 2009 were:

(Millions of dollars)	December 31, 2009
Cash flow weighted-average discount rates on retained interests	7.7% to 12.4%
Weighted-average maturity in months	22
Expected prepayment rate	18.0%
Expected credit losses	4.7% to 4.8%

During 2009, the assumptions used to determine the expected cash flows for Cat Financial's securitization transactions were revised, which resulted in other-than-temporary impairments to earnings of \$9 million and \$31 million during the three and six months ended June 30, 2009. The impairment charge was recorded in Revenues of Financial Products on the Consolidated Statement of Results of Operations. The impairments recognized in earnings were primarily driven by an increase in the credit loss assumption due to the continuing adverse economic conditions in the U.S. The noncredit related component of \$15 million for the three and six months ended June 30, 2009, recorded in Accumulated other comprehensive income (loss), was primarily driven by changes in discount rates.

To maintain competitiveness in the capital markets and to have effective and efficient use of alternative funding sources, Cat Financial may elect to provide additional reserve support to previously issued asset-backed securitizations.

Cat Financial also retains servicing responsibilities and receives a servicing fee of approximately one percent of the remaining value of the finance receivables for their servicing responsibilities.

Sales and Servicing of Trade Receivables

Our Machinery and Engines operations generate trade receivables from the sale of inventory to dealers and customers. Certain of these receivables are sold to Cat Financial.

During 2009, Cat Financial sold interests in a certain pool of trade receivables through a revolving structure to third-party commercial paper conduits, which are asset-backed commercial paper issuers that are special purpose entities (SPEs) of the sponsor bank and are not consolidated by Cat Financial. Cat Financial services the sold trade receivables and receives an annual servicing fee of approximately 0.5 percent of the average outstanding principal balance. Consolidated expenses of \$2 million and \$4 million related to the sale of trade receivables were recognized for the three and six months ended June 30, 2009, respectively, and are included in Other income (expense) in the Consolidated Statement of Results of Operations. As of June 30, 2010 and December 31, 2009, there were no trade receivables sold to the third-party commercial paper conduits.

The cash collections from this pool of receivables are first applied to satisfy any obligations of Cat Financial to the third-party commercial paper conduits. The third-party commercial paper conduits have no recourse to Cat Financial's assets, other than the remaining interest, for failure of debtors to pay when due.

Cash flows from sale of trade receivables:

(Millions of dollars)	Six Months Ended June 30,	
	2010	2009
Cash proceeds from sales of receivables to the conduits	\$	\$791
Cash flows received on the interests that continue to be held	\$3,500	\$4,496

16. Redeemable Noncontrolling Interest Caterpillar Japan Ltd.

On August 1, 2008, Shin Caterpillar Mitsubishi Ltd. (SCM) completed the first phase of a share redemption plan whereby SCM redeemed half of Mitsubishi Heavy Industries (MHI) shares in SCM. This resulted in Caterpillar owning 67 percent of the outstanding shares of SCM and MHI owning the remaining 33 percent. As part of the share redemption, SCM was renamed Caterpillar Japan Ltd. (Cat Japan). Both Cat Japan and MHI have options, exercisable beginning August 1, 2013, to require the redemption of the remaining shares owned by MHI, which if exercised, would make Caterpillar the sole owner of Cat Japan.

Table of Contents

The remaining 33 percent of Cat Japan owned by MHI has been reported as redeemable noncontrolling interest and classified as mezzanine equity (temporary equity) in the Consolidated Statement of Financial Position. The redeemable noncontrolling interest is reported at its estimated redemption value. Any adjustment to the redemption value impacts Profit employed in the business, but does not impact Profit. If the fair value of the redeemable noncontrolling interest falls below the redemption value, profit available to common stockholders would be reduced by the difference between the redemption value and the fair value. This would result in lower profit in the profit per common share computation in that period. Reductions impacting the profit per common share computation may be partially or fully reversed in subsequent periods if the fair value of the redeemable noncontrolling interest increases relative to the redemption value. Such increases in profit per common share would be limited to cumulative prior reductions. During the second quarter of 2009, the estimated redemption value decreased, resulting in an adjustment to the carrying value of the redeemable noncontrolling interest. Profit employed in the business increased by \$37 million due to this adjustment. During the first and second quarters of 2010, the estimated redemption value decreased, resulting in adjustments to the carrying value of the redeemable noncontrolling interest. Profit employed in the business increased by \$9 million in the first quarter and increased an additional \$9 million in the second quarter due to these adjustments. As of June 30, 2010, the fair value of the redeemable noncontrolling interest remained greater than the estimated redemption value.

We estimate the fair value of the redeemable noncontrolling interest using a discounted five year forecasted cash flow with a year-five residual value. Based on our current expectations for Cat Japan, we expect the fair value of the redeemable noncontrolling interest to remain greater than the redemption value. However, if economic conditions deteriorate and Cat Japan's business forecast is negatively impacted, it is possible that the fair value of the redeemable noncontrolling interest may fall below the estimated redemption value. Should this occur, profit would be reduced in the profit per common share computation by the difference between the redemption value and the fair value. Lower long-term growth rates, reduced long-term profitability as well as changes in interest rates, costs, pricing, capital expenditures and general market conditions may reduce the fair value of the redeemable noncontrolling interest.

With the consolidation of Cat Japan's results of operations, 33 percent of Cat Japan's comprehensive income or loss is attributed to the redeemable noncontrolling interest, impacting its carrying value. Because the redeemable noncontrolling interest must be reported at its estimated future redemption value, the impact from attributing the comprehensive income or loss is offset by adjusting the carrying value to the redemption value. This adjustment impacts Profit employed in the business, but not Profit. For the six months ended June 30, 2009, the carrying value had decreased by \$30 million due to Cat Japan's comprehensive loss. This resulted in an offsetting adjustment of \$30 million to increase the carrying value to the redemption value and a corresponding reduction to Profit employed in the business. For the six months ended June 30, 2010, the carrying value had increased by \$12 million due to Cat Japan's comprehensive income. This resulted in an offsetting adjustment of \$12 million to decrease the carrying value to the redemption value and a corresponding increase to Profit employed in the business. As Cat Japan's functional currency is the Japanese yen, changes in exchange rates affect the reported amount of the redeemable noncontrolling interest. At June 30, 2010, the redeemable noncontrolling interest was \$432 million.

17. Fair Value Measurements

A. Fair value measurements

The guidance on fair value measurements defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants. This guidance also specifies a fair value hierarchy based upon the observability of inputs used in valuation techniques. Observable inputs (highest level) reflect market data obtained from independent sources, while unobservable inputs (lowest level) reflect internally developed market assumptions. In accordance with this guidance, fair value measurements are classified under the following hierarchy:

Edgar Filing: CATERPILLAR INC - Form 10-Q

- **Level 1** Quoted prices for identical instruments in active markets.
- **Level 2** Quoted prices for similar instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations in which all significant inputs or significant value-drivers are observable in active markets.
- **Level 3** Model-derived valuations in which one or more significant inputs or significant value-drivers are unobservable.

Table of Contents

When available, we use quoted market prices to determine fair value, and we classify such measurements within Level 1. In some cases where market prices are not available, we make use of observable market based inputs to calculate fair value, in which case the measurements are classified within Level 2. If quoted or observable market prices are not available, fair value is based upon internally developed models that use, where possible, current market-based parameters such as interest rates, yield curves and currency rates. These measurements are classified within Level 3.

Fair value measurements are classified according to the lowest level input or value-driver that is significant to the valuation. A measurement may therefore be classified within Level 3 even though there may be significant inputs that are readily observable.

The guidance on fair value measurements expanded the definition of fair value to include the consideration of nonperformance risk. Nonperformance risk refers to the risk that an obligation (either by a counterparty or Caterpillar) will not be fulfilled. For our financial assets traded in an active market (Level 1 and certain Level 2), the nonperformance risk is included in the market price. For certain other financial assets and liabilities (Level 2 and 3), our fair value calculations have been adjusted accordingly.

Available-for-sale securities

Our available-for-sale securities, primarily at Cat Insurance, include a mix of equity and debt instruments (see Note 8 for additional information). Fair values for our U.S. treasury bonds and equity securities are based upon valuations for identical instruments in active markets. Fair values for other government bonds, corporate bonds and mortgage-backed debt securities are based upon models that take into consideration such market-based factors as recent sales, risk-free yield curves and prices of similarly rated bonds.

Derivative financial instruments

The fair value of interest rate swap derivatives is primarily based on models that utilize the appropriate market-based forward swap curves and zero-coupon interest rates to determine discounted cash flows. The fair value of foreign currency and commodity forward and option contracts is based on a valuation model that discounts cash flows resulting from the differential between the contract price and the market-based forward rate.

Securitized retained interests

The fair value of securitized retained interests is based upon a valuation model that calculates the present value of future expected cash flows using key assumptions for credit losses, prepayment rates and discount rates. These assumptions are based on our historical experience, market trends and anticipated performance relative to the particular assets securitized.

Guarantees

The fair value of guarantees is based upon the premium we would require to issue the same guarantee in a stand-alone arms-length transaction with an unrelated party. If quoted or observable market prices are not available, fair value is based upon internally developed models that utilize current market-based assumptions.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Assets and liabilities measured at fair value, primarily related to Financial Products, included in our Consolidated Statement of Financial Position as of June 30, 2010 and December 31, 2009 are summarized below:

Edgar Filing: CATERPILLAR INC - Form 10-Q

Table of Contents

(Millions of dollars)	June 30, 2010			Total Assets / Liabilities, at Fair Value

Below are roll-forwards of assets and liabilities measured at fair value using Level 3 inputs for the six months ended June 30, 2010 and 2009. These instruments, primarily related to Cat Financial, were valued using pricing models that, in management's judgment, reflect the

assumptions a marketplace participant would use.

Table of Contents

(Millions of dollars)	Securitized Retained Interests	Guarantees
Balance at December 31, 2009	\$102	\$17
Adjustment to adopt accounting for variable-interest entities	(102)	
Issuance of guarantees		4
Expiration of guarantees		(4)
Balance at June 30, 2010	\$	\$17
Balance at December 31, 2008	\$52	\$14
Gains or losses included in earnings (realized / unrealized)	(28)	
Changes in Accumulated other comprehensive income (loss)	(6)	
Purchases, issuances, and settlements	86	1
Balance at June 30, 2009	\$104	\$15

The amount of unrealized losses on securitized retained interests included in earnings for the three and six months ended June 30, 2009 related to assets still held at June 30, 2009 was \$7 million and \$28 million, respectively. These losses were reported in Revenues of Financial Products in the Consolidated Statement of Results of Operations.

In addition to the amounts above, we had impaired loans of \$240 million and \$208 million as of June 30, 2010 and December 31, 2009, respectively. A loan is considered impaired when management determines that collection of contractual amounts due is not probable. In these cases, an allowance for credit losses is established based primarily on the fair value of associated collateral. As the collateral's fair value is based on observable market prices and/or current appraised values, the impaired loans are classified as Level 2 measurements.

B. Fair values of financial instruments

In addition to the methods and assumptions we use to record the fair value of financial instruments as discussed in the Fair value measurements section above, we used the following methods and assumptions to estimate the fair value of our financial instruments.

Cash and short-term investments

Carrying amount approximated fair value.

Restricted cash and short-term investments

Carrying amount approximated fair value. Restricted cash and short-term investments are included in Prepaid expenses and other current assets in the Consolidated Statement of Financial Position.

Finance receivables

Fair value was estimated by discounting the future cash flows using current rates, representative of receivables with similar remaining maturities.

Wholesale inventory receivables

Fair value was estimated by discounting the future cash flows using current rates, representative of receivables with similar remaining maturities.

Short-term borrowings

Carrying amount approximated fair value.

Long-term debt

Fair value for Machinery and Engines fixed rate debt was estimated based on quoted market prices. For Financial Products, fixed and floating rate debt was estimated based on quoted market prices. Commercial paper carrying amounts approximated fair value. For deposit obligations, carrying value approximated fair value.

Please refer to the table below for the fair values of our financial instruments.

Table of Contents

(Millions of dollars)	Fair Values of Financial Instruments		December 31,		Reference
	June 30, 2010		2009		
	Carrying Amount	Fair Value	Carrying Amount	Fair Value

Financial Products	20,244	21,312	21,594	22,367	
Guarantees	17	17	17	17	Note 10

1 Total excluded items have a net carrying value at June 30, 2010 and December 31, 2009 of \$7,166 million and \$7,780 million, respectively.

18. Employee separation charges

In 2009, we reported employee separation charges of \$481 million in Other operating (income) expenses in the Consolidated Statement of Results of Operations related to various voluntary and involuntary separation programs. These programs were in response to a sharp decline in sales volume due to the global recession.

For the three and six months ended June 30, 2010, we recognized employee separation charges of \$20 million in Other operating (income) expenses in the Consolidated Statement of Results of Operations primarily related to involuntary separations due to the streamlining of our corporate structure as announced in the second quarter. In addition, see Note 3 for information regarding stock-based compensation cost associated with the modification of equity awards for employees affected by the separations.

Our accounting for separations is dependent upon how the particular program is designed. For voluntary programs, eligible separation costs are recognized at the time of employee acceptance. For involuntary programs, eligible costs are recognized when management has approved the program, the affected employees have been properly identified and the costs are estimable.

The following table summarizes the 2009 and 2010 separation activity by geographic region:

Edgar Filing: CATERPILLAR INC - Form 10-Q

(Millions of dollars)	Machinery and Engines					Total
	North America	Latin America	EAME	Asia Pacific	Financial Products ¹	
Liability balance at December 31, 2008	\$4	\$2	\$5	\$	\$	\$11
Increase in liability (separation charges) ²	\$323	\$15	\$102	\$31	\$10	\$481
Reduction in liability (payments and other adjustments)	(313)	(17)	(78)	(25)	(10)	(443)
Liability balance at December 31, 2009	\$14	\$	\$29	\$6	\$	\$49
Increase in liability (separation charges)	\$15	\$	\$2	\$3	\$	\$20
Reduction in liability (payments and other adjustments)	(13)		(16)	(6)		(35)
Liability balance at June 30, 2010	\$16	\$	\$15	\$3	\$	\$34

1 Includes \$8 million for North America and \$2 million for EAME.

2 Includes \$442 million for the six months ended June 30, 2009.

Table of Contents

The remaining liability balances as of June 30, 2010 represent costs for employees that have either not yet separated from the Company or their full severance has not yet been paid. The majority of these remaining costs are expected to be paid during 2010.

In addition to the 2009 separation charges noted above, we reported \$225 million (\$201 million for the six months ended June 30, 2009) of costs associated with certain pension and other postretirement benefit plans, which were also recognized in Other operating (income) expenses in the Consolidated Statement of Results of Operations. See Note 9 for additional information.

The majority of the separation charges, made up primarily of cash severance payments, pension and other postretirement benefit costs, and stock-based compensation costs noted above were not assigned to operating segments. They are included in the reconciliation of total accountable profit from reportable segments to total profit (loss) before taxes. See Note 14 for additional details surrounding this reconciliation.

19. Business combinations

FCM Rail Ltd.

In May 2010, we acquired 100 percent of the equity in privately held FCM Rail Ltd. (FCM) for approximately \$97 million, including the assumption of \$59 million in debt. We paid \$32 million at closing with an additional \$6 million to be paid by May 2012. FCM is one of the largest lessors of maintenance-of-way (MOW) equipment in the United States, and is located in Fenton, Michigan. This acquisition strengthens Progress Rail's position in the MOW industry by expanding its service offerings.

The transaction was financed with available cash. Tangible assets acquired of \$93 million, primarily consisting of property, plant and equipment, were recorded at their fair values. Finite-lived intangible assets acquired of \$10 million related to customer relationships are being amortized on a straight-line basis over 15 years. Liabilities assumed of \$81 million, including \$59 million of assumed debt, were recorded at their fair values. Goodwill of \$16 million, non-deductible for income tax purposes, represents the excess of cost over the fair value of net tangible and finite-lived intangible assets acquired. These values represent a preliminary allocation of the purchase price subject to finalization of post-closing procedures. The results of the acquired business for the period from the acquisition date are included in the accompanying consolidated financial statements and reported in the All Other category in Note 14. Assuming this transaction had been made at the beginning of any period presented, the consolidated pro forma results would not be materially different from reported results.

GE Transportation's Inspection Products Business

In March 2010, we acquired the Inspection Products business from GE Transportation's Intelligent Control Systems division for approximately \$45 million. The acquired business has operations located primarily in the United States, Germany and Italy that design, manufacture and sell hot wheel and hot box detectors, data acquisition systems, draggers and other related inspection products for the global freight and passenger rail industries. The acquisition supports our strategic initiative to expand the scope and product range of our rail signaling business and will provide a foundation for further global expansion of this business.

The transaction was financed with available cash. Tangible assets acquired of \$12 million and liabilities assumed of \$9 million were recorded at their fair values. Finite-lived intangible assets acquired of \$28 million related to customer relationships and intellectual property are being amortized on a straight-line basis over a weighted-average amortization period of approximately 13 years. Goodwill of \$14 million, approximately \$8 million of which is deductible for income tax purposes, represents the excess cost over the fair value of the net tangible and finite-lived intangible assets acquired. These values represent a preliminary allocation of the purchase price subject to finalization of post-closing procedures. The results of the acquired business for the period from the acquisition date are included in the accompanying consolidated financial statements and are reported in the All Other category in Note 14. Assuming this transaction had been made at the beginning of any period presented, the consolidated pro forma results would not be materially different from reported results.

Table of Contents

JCS Company, Ltd.

In March 2010, we acquired 100 percent of the equity in privately held JCS Company Ltd. (JCS) for approximately \$34 million, consisting of \$32 million paid at closing and an additional \$2 million post-closing adjustment paid in June 2010. Based in Pyongtaek, South Korea, JCS is a leading manufacturer of centrifugally cast metal face seals used in many of the idlers and rollers contained in our undercarriage components. JCS is also a large supplier of seals to external customers in Asia and presents the opportunity to expand our customer base. The purchase of this business provides Caterpillar access to proprietary technology and expertise which we will be able to replicate across our own seal production processes.

The transaction was financed with available cash. Tangible assets acquired of \$22 million and liabilities assumed of \$8 million were recorded at their fair values. Finite-lived intangible assets acquired of \$12 million related to intellectual property and customer relationships are being amortized on a straight-line basis over a weighted-average amortization period of approximately 9 years. Goodwill of \$8 million, non-deductible for income tax purposes, represents the excess of cost over the fair value of net tangible and finite-lived intangible assets acquired. The results of the acquired business for the period from the acquisition date are included in the accompanying consolidated financial statements and reported in the Core Components segment in Note 14. Assuming this transaction had been made at the beginning of any period presented, the consolidated pro forma results would not be materially different from reported results.

Table of Contents

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Overview

We reported a second-quarter 2010 profit of \$1.09 per share, an increase of \$0.49 per share from a profit of \$0.60 per share in the second quarter of 2009. Profit of \$707 million was 91 percent higher than second-quarter 2009 profit of \$371 million. Sales and revenues of \$10.409 billion were up 31 percent from \$7.975 billion in the second quarter of 2009.

Profit per share for the six months ended June 30, 2010 was \$1.46 per share, an increase of \$1.04 per share from a profit of \$0.42 per share for the six months ended June 30, 2009. Profit of \$940 million was 263 percent higher than profit of \$259 million for the six months ended June 30, 2009. Sales and revenues for the six months ended June 30, 2010 were \$18.647 billion, up \$1.447 billion, or 8 percent, from the six months ended June 30, 2009.

We have been focused on increasing production in response to higher demand from our customers, particularly in developing economies, managing costs and improving cash flow. The results can be seen in our second quarter sales and revenues increased, operating profit as a percent of sales more than doubled, and ***Machinery and Engines*** operating cash flow and our ***debt-to-capital ratio*** strengthened.

Sales and revenues were up \$2.434 billion from the second quarter of 2009. ***Sales volume*** improved \$2.259 billion, ***price realization*** was favorable \$187 million, and the impact of ***currency*** added \$23 million. ***Financial Products*** revenues were down \$35 million. Profit was up \$336 million from the second quarter of 2009. The increase was primarily the result of higher sales volume, improved operating efficiencies and favorable price realization, partially offset by higher taxes, provisions for incentive compensation and the absence of \$110 million of ***LIFO inventory decrement benefits*** from the second quarter of 2009.

Highlights for the second quarter of 2010 include:

- Second-quarter sales and revenues of \$10.409 billion were 31 percent higher than the second quarter of 2009, led by strong growth in developing economies.
- ***Machinery*** sales increased 55 percent due to the absence of dealer inventory reductions that occurred in the second quarter of 2009, higher end-user demand and better price realization.
- ***Engines*** sales increased 3 percent, and Financial Products revenues declined 5 percent from the second quarter of 2009.
- ***Manufacturing costs*** improved \$316 million. Excluding LIFO inventory decrement benefits of \$110 million in the second quarter of 2009, manufacturing costs improved \$426 million.
- Machinery and Engines operating cash flow was \$2.357 billion through the first half of 2010, compared with \$583 million through the first half of 2009.

Edgar Filing: CATERPILLAR INC - Form 10-Q

- Machinery and Engines debt-to-capital ratio was 41.9 percent at the end of the second quarter of 2010, compared to 53.1 percent at the end of the second quarter of 2009 and 47.2 percent at year-end 2009.

Outlook

We have improved our outlook for 2010 by raising the sales and revenues range and increasing profit expectations. Sales and revenues are now expected to be in a range of \$39 to \$42 billion, with a midpoint of \$40.5 billion. The increased 2010 profit outlook is a range of \$3.15 to \$3.85 per share, with a midpoint of \$3.50 per share. The previous sales and revenues outlook was a range of \$38 to \$42 billion, and the previous profit outlook range was \$2.50 to \$3.25 per share.

The increased outlook for 2010 reflects an increase in sales and revenues and a more significant increase in profit a result of our continuing focus on cost management and profit improvement. While significant economic concerns remain around the world, orders have continued to outpace our shipments, and we expect to increase production in the second half of the year.

We continue to be positive about the longer-term prospects for many of the industries we serve like mining, energy, infrastructure, electric power and rail. This year we have made several announcements related to increasing capacity and expanding our line-up of products and services.

Table of Contents

The initiatives announced include:

- A new excavator facility to increase production capacity in the United States.
- An agreement to acquire Electro-Motive Diesel (EMD), which has the largest installed base of diesel-electric locomotives in the world.
- A multi-year investment of nearly \$700 million supporting mining customers, including a full line of mining shovels and capacity expansion for mining trucks made in the United States and India.
- A 400-percent increase in excavator production capacity over the next several years in Xuzhou, China.
- A new facility for small wheel loader and backhoe loader manufacturing in Brazil.

We expect these investments will position the company for continued global leadership and growth.

Notes:

- Glossary of terms is included on pages 58-59; first occurrence of terms shown in bold italics.
- Information on non-GAAP financial measures, including the treatment of redundancy costs, is included on page 69.

Table of Contents

Consolidated Results of Operations

THREE MONTHS ENDED JUNE 30, 2010 COMPARED WITH THREE MONTHS ENDED JUNE 30, 2009

SALES AND REVENUES

The chart above graphically illustrates reasons for the change in Consolidated Sales and Revenues between second quarter 2009 (at left) and second quarter 2010 (at right). Items favorably impacting sales and revenues appear as upward stair steps with the corresponding dollar amounts above each bar, while items negatively impacting sales and revenues appear as downward stair steps with dollar amounts reflected in parentheses above each bar. Caterpillar management utilizes these charts internally to visually communicate with the company's Board of Directors and employees.

Sales and revenues for the second quarter of 2010 were \$10.409 billion, up \$2.434 billion, or 31 percent, from the second quarter of 2009. Machinery sales volume was up \$2.232 billion due to the absence of dealer inventory reductions that occurred in the second quarter of 2009 and higher end-user demand. Engines volume increased \$27 million. Price realization improved \$187 million, and currency had a positive impact on sales of \$23 million. Financial Products revenues decreased \$35 million.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Our *integrated service businesses* tend to be more stable through the business cycle than new machines and engines. Second-quarter sales and revenues for these businesses were higher compared to the second quarter of 2009. However, with the increase in sales of new machines this quarter, integrated service businesses represented a lower percent of total company sales and revenues than the prior period. These businesses represented about 40 percent of total company sales and revenues in the second quarter of 2010, down from about 46 percent in the second quarter of 2009.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Table of Contents

Sales and Revenues by Geographic Region

(Millions of dollars)	Total	% Change	North America	% Change	Latin America	% Change	EAME	% Change	Asia/ Pacific	% Change
<u>Second Quarter 2010</u>										
Machinery	\$6,733	55%	\$2,478	43%	\$1,158	116%	\$1,374	36%	\$1,723	62%
Engines ¹	2,990	3%	1,059	4%	361	42%	924	(15)%	646	17%

	\$7,975		\$3,181		\$867		\$2,224		\$1,703	

1 Does not include internal engines transfers of \$602 million and \$319 million in second quarter 2010 and 2009, respectively. Internal engines transfers are valued at prices comparable to those for unrelated parties.

2 Does not include internal revenues earned from Machinery and Engines of \$67 million and \$93 million in second quarter 2010 and 2009, respectively.

Machinery Sales - Sales were \$6.733 billion, an increase of \$2.395 billion, or 55 percent, from the second quarter of 2009.

- Sales volume increased \$2.232 billion.
- Price realization increased \$131 million.
- Currency increased sales by \$32 million.
- Geographic mix between regions (included in price realization) was \$4 million unfavorable.
- Dealer-reported inventories were about flat during the quarter compared with a reduction of almost \$1.2 billion in the second quarter of 2009. Absence of the 2009 inventory change was a contributor to higher sales volume. Dealer inventory levels were well below the second quarter of 2009, and months of supply were the lowest in at least 10 years.
- For the first time since the second quarter of 2008, dealers reported increased deliveries to end users. Factors underlying this change included low interest rates, continued economic recoveries in most countries, increased construction in some countries and higher metals and energy prices.
- Reported deliveries in the developed economies showed an increasing trend during the quarter, even though most economic recoveries were modest. We believe this improvement reflects a willingness by end users to resume fleet replacements after significantly lowering purchases over the last two years.
- Overall sales volume grew in all regions and in most countries within those regions.

North America Sales increased \$748 million, or 43 percent.

- Sales volume increased \$683 million.
- Price realization increased \$64 million.

Edgar Filing: CATERPILLAR INC - Form 10-Q

- Currency increased sales by \$1 million.
- Dealers reduced reported inventories during the second quarter of 2010, but at a lower rate than in the second quarter of 2009. This change contributed to higher sales volume. Dealer inventories were about half the second quarter 2009 levels, and months of supply were the lowest in at least 10 years.

Table of Contents

- An increase in deliveries to end users, as reported by dealers, was the most significant contributor to the growth in sales volume. Economic recoveries in both the United States and Canada led to increased output in some key industries, which we believe encouraged buying.
- Increases in dealer deliveries were greater than the modest increases in economic activity might suggest. We believe that low interest rates and increased confidence encouraged users to moderate the shrinking and aging of fleets that started in early 2006.
- Housing starts in the United States were 12 percent higher than last year and new single-family units available for sale were the lowest since 1970. Canadian housing starts were up 54 percent. Increased housing construction and some signs that home prices are stabilizing contributed to increased sales of smaller machines.
- U.S. nonresidential building contracting, which tends to lag economic recoveries, fell 27 percent from the second quarter of 2009. Lower commercial property prices and low industrial capacity utilization were contributing factors. Nonresidential construction in Canada declined 3 percent.
- Spending for highway construction increased slightly in the second quarter compared to the second quarter of 2009. Funding provided by the U.S. government's recovery program helped offset pressure on state and local government budgets.
- U.S. nonmetals mining and quarry production increased 6 percent, and Canadian producers increased quarry output 2 percent. Modest production gains benefited sales of quarry products.
- Metals prices were 50 percent higher than last year, causing U.S. metals mines to increase production 8 percent. These factors helped increase sales of mining equipment.
- Central Appalachian coal prices averaged almost \$63 per ton during the quarter and were 27 percent higher than the second quarter of 2009. U.S. coal production increased 3 percent during the quarter, and Canadian production has risen significantly so far this year. An improved coal sector further increased mining sales.
- Lumber prices rose 56 percent, encouraging a 20-percent increase in U.S. production and a 29-percent gain in Canadian production. Sales of forestry products increased to support this demand.

Latin America Sales increased \$621 million, or 116 percent.

- Sales volume increased \$547 million.
- Price realization increased \$38 million.
- Currency increased sales by \$36 million.
- Dealers reported increases in their inventories during the quarter compared with a drawdown in the second quarter of 2009. This change, taken to prepare for a better economic environment, accounted for most of the growth in sales volume.
- Dealer inventories were about the same as a year earlier. Inventories in months of supply were the lowest in at least 10 years.
- Dealers also reported higher deliveries to end users, a result of continuing economic recoveries and higher commodity prices. Industrial production increased in most countries, mining output rose and oil production was up 2 percent.
- Brazil had the largest increase in sales volume in Latin America. Interest rates averaged lower than last year, a major factor in the 16-percent increase in industrial production. Mining output increased 17 percent, driven by a 44-percent gain in iron ore.
- Sales volume increased significantly in Chile, despite the recent earthquake's unfavorable impact on some sectors of the economy. Interest rates were lower than last year, and significantly higher copper prices contributed to higher copper export revenues.

EAME Sales increased \$364 million, or 36 percent.

- Sales volume increased \$402 million.

Table of Contents

- Price realization decreased \$13 million.
- Currency decreased sales by \$25 million.
- Dealer-reported inventories were about flat during the quarter compared with a reduction in the second quarter of 2009. This change accounted for most of the sales volume growth.
- Both inventories and months of supply were well below last year. Months of supply was also slightly below the historical average.
- European economies reflected some strengthening, as indicated by faster growth in industrial production and favorable surveys of business expectations. Housing starts also improved in several countries.
- Dealers in Europe reported an increase in deliveries in the second quarter of 2010 compared to the second quarter of 2009.
- The economic environment was favorable in Africa/Middle East. Recoveries were underway in the large economies of Turkey and South Africa, favorable metals prices benefited mining production and regional oil revenues increased in response to higher oil prices and production.
- Economic activity in the Commonwealth of Independent States (CIS) is improving. Positive factors included increased government spending, higher mining output and 3-percent growth in crude oil production.

Asia/Pacific Sales increased \$662 million, or 62 percent.

- Sales volume increased \$596 million.
- Price realization increased \$46 million.
- Currency increased sales by \$20 million.
- Dealer-reported inventories were about flat during the quarter compared to a reduction in the second quarter of 2009. This change positively benefited sales volume. Inventories were below last year in both dollars and months of supply; months of supply was also below the historical average.
- Most of the increase in sales volume resulted from dealers reporting higher deliveries to end users. Asian economies were recovering, which benefited construction, and higher metals prices encouraged investment in the mining industry.
- China had a large increase in sales volume, and deliveries remained near record highs. Although the government acted to control the recovery, lending increased 21 percent, and industrial production was up 16 percent. Both construction spending and coal production increased more than 20 percent.
- Lower interest rates in Indonesia contributed to economic growth. Construction spending increased, leading to a gain in sales volume.
- Australian coal prices rose 50 percent, prompting mines to expand production. In response to economic growth, housing permits increased 31 percent. These factors contributed to the growth in sales volume.
- In Japan, industrial production was 23 percent higher than last year, and orders for new housing rose 5 percent.

Engines Sales Sales were \$2.990 billion, an increase of \$74 million, or 3 percent, from the second quarter of 2009.

Edgar Filing: CATERPILLAR INC - Form 10-Q

- Sales volume increased \$27 million.
- Price realization increased \$56 million.
- Currency decreased sales by \$9 million.

Table of Contents

- Geographic mix between regions (included in price realization) was \$7 million favorable.
- Dealer inventories and months of supply were down from the second quarter of 2009.

North America Sales increased \$39 million, or 4 percent.

- Sales volume increased \$54 million.
- Price realization decreased \$15 million.
- Sales volume in North America was relatively flat. Engine sales for industrial applications were the most significant positive contributor, coming off depressed levels in the second quarter of 2009.

Latin America Sales increased \$106 million, or 42 percent.

- Sales volume increased \$95 million.
- Price realization increased \$7 million.
- Currency increased sales by \$4 million.
- Sales for petroleum applications increased 16 percent due to higher turbine sales from one large order.
- Sales of electric power applications increased 109 percent due to higher turbine sales from one large order and modest improvements in industry demand.

Edgar Filing: CATERPILLAR INC - Form 10-Q

EAME Sales decreased \$166 million, or 15 percent.

- Sales volume decreased \$189 million.
- Price realization increased \$32 million.
- Currency decreased sales by \$9 million.
- Sales for electric power applications increased 11 percent primarily due to increased turbine sales.
- Sales for petroleum applications decreased 44 percent primarily due to lower turbine sales and a slowdown in demand for engines used in production applications and land-based drilling.
- Sales for marine applications decreased 36 percent due to weak industry demand and a declining order backlog.
- Sales for industrial applications increased 8 percent due to higher demand in construction and agricultural applications.

Asia/Pacific Sales increased \$95 million, or 17 percent.

- Sales volume increased \$74 million.
- Price realization increased \$25 million.
- Currency decreased sales by \$4 million.
- Sales for petroleum applications increased 16 percent primarily due to higher turbine sales.

Edgar Filing: CATERPILLAR INC - Form 10-Q

- Sales for electric power applications increased 64 percent primarily due to higher turbine sales and increased demand throughout the region.

Table of Contents

- Sales for marine applications decreased 15 percent due to weak industry demand, partially offset by higher sales for workboat and general cargo vessels.

Financial Products Revenues - Revenues were \$686 million, a decrease of \$35 million, or 5 percent, from the second quarter of 2009.

- Revenues decreased \$59 million due to a decrease in average *earning assets*, partially offset by an increase of \$14 million due to the favorable impact of higher interest rates on new and existing finance receivables.
- Other revenues at Cat Financial increased \$8 million. The increase was due to a \$12 million favorable impact from returned and repossessed equipment and the absence of a \$9 million write-down on retained interests related to the securitized asset portfolio in the second quarter of 2009, partially offset by the unfavorable impact from various other revenue items.

OPERATING PROFIT

The chart above graphically illustrates reasons for the change in Consolidated Operating Profit between second quarter 2009 (at left) and second quarter 2010 (at right). Items favorably impacting operating profit appear as upward stair steps with the corresponding dollar amounts above each bar, while items negatively impacting operating profit appear as downward stair steps with dollar amounts reflected in parentheses above each bar. Caterpillar management utilizes these charts internally to visually communicate with the company's Board of Directors and employees. The bar entitled Other/M&E Redundancy includes the operating profit impact of *consolidating adjustments* and *Machinery and Engines other operating (income) expenses*, which include Machinery and Engines *redundancy costs*.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Operating profit in the second quarter of 2010 was \$977 million compared to \$347 million in the second quarter of 2009. The improvement was primarily the result of higher sales volume, which includes the impact of an unfavorable mix of products, lower manufacturing costs and better price realization. The improvements were partially offset by higher selling, general and administrative (SG&A) and research and development (R&D) expenses and an unfavorable impact of currency.

Manufacturing costs improved \$316 million primarily due to variable labor and burden efficiencies and lower warranty and material costs, partially offset by the absence of \$110 million of LIFO inventory decrement benefits.

SG&A and R&D expenses increased by \$217 million primarily due to provisions related to incentive pay and increased expense to support product development programs related to EPA Tier 4 emissions requirements.

Currency had a \$77 million negative impact on operating profit as the negative impact on costs more than offset the benefit to sales.

Redundancy costs were \$85 million in the second quarter of 2009.

Table of Contents

Operating Profit (Loss) by Principal Line of Business

(Millions of dollars)	Second Quarter 2010	Second Quarter 2009	\$ Change	% Change
Machinery ¹	\$477	\$(252)	\$729	
Engines ¹	462	555	(93)	(17)%
Financial Products	92	127	(35)	(28)%
Consolidating Adjustments	(54)	(83)	29	
Consolidated Operating Profit	\$977	\$347	\$630	182%

¹ Caterpillar operations are highly integrated; therefore, the company uses a number of allocations to determine lines of business operating profit for Machinery and Engines.

Operating Profit/Loss by Principal Line of Business

- **Machinery** operating profit was \$477 million compared to an operating loss of \$252 million in the second quarter of 2009. Positive factors included higher sales volume, which includes the impact of an unfavorable mix of products, lower manufacturing costs (despite the absence of LIFO decrement benefits) and improved price realization. These improvements were partially offset by higher SG&A and R&D expenses.
- **Engines** operating profit of \$462 million was down \$93 million from the second quarter of 2009. Higher SG&A and R&D expenses and lower sales volume, which includes the impact of an unfavorable mix of products, were partially offset by lower manufacturing costs and improved price realization.
- **Financial Products** operating profit of \$92 million was down \$35 million, or 28 percent, from the second quarter of 2009. The decrease was primarily attributable to a \$26 million unfavorable impact from lower average earning assets and a \$12 million increase in SG&A expenses (excluding the provision for credit losses).

Other Profit/Loss Items

- **Interest expense excluding Financial Products** decreased \$28 million from the second quarter of 2009.
- **Other income/expense** was income of \$50 million compared with income of \$163 million in the second quarter of 2009. The decrease was primarily caused by an unfavorable impact from currency exchange gains and losses.

- **The provision for income taxes** in the second quarter of 2010 reflects an estimated annual effective tax rate of 29 percent, excluding the items discussed below, compared to an actual tax rate of 10 percent for the second quarter of 2009. The 2010 estimated annual tax rate is expected to be less than the U.S. tax rate of 35 percent primarily due to profits in tax jurisdictions with rates lower than the U.S. rate. The 2010 estimated annual tax rate is based on current tax law and therefore does not include the U.S. research and development tax credit and other benefits that have not been extended past 2009.

The provision for income taxes in the second quarter of 2010 also includes a \$34 million benefit related to the recognition of refund claims for prior tax years, a \$26 million benefit for the release of a valuation allowance against the deferred tax assets of certain non-U.S. entities due to tax planning actions implemented in the second quarter of 2010, and a \$5 million benefit related to the first three months of 2010 for a decrease in the estimated annual tax rate from 30 to 29 percent.

- **Profit (loss) attributable to noncontrolling interests** negatively impacted profit by \$37 million from the second quarter of 2009, primarily due to improved financial performance of *Caterpillar Japan Ltd.* (Cat Japan). We own two-thirds of Cat Japan, meaning one-third of its profits or losses are attributable to our partner, Mitsubishi Heavy Industries.

Table of Contents**SIX MONTHS ENDED JUNE 30, 2010 COMPARED WITH SIX MONTHS ENDED JUNE 30, 2009****SALES AND REVENUES****Consolidated Sales and Revenues Comparison
June 2010 YTD vs. June 2009 YTD**

The chart above graphically illustrates reasons for the change in Consolidated Sales and Revenues between six months ended June 30, 2009 (at left) and the six months ended June 30, 2010 (at right). Items favorably impacting sales and revenues appear as upward stair steps with the corresponding dollar amounts above each bar, while items negatively impacting sales and revenues appear as downward stair steps with dollar amounts reflected in parentheses above each bar. Caterpillar management utilizes these charts internally to visually communicate with the company's Board of Directors and employees.

Sales and revenues for the six months ended June 30, 2010 were \$18.647 billion, up \$1.447 billion, or 8 percent, from the six months ended June 30, 2009. Machinery sales volume was up \$1.937 billion due to absence of dealer inventory reductions that occurred in the first half of 2009 and higher end-user demand. Engines volume decreased \$951 million. Price realization improved \$359 million, and currency had a positive impact on sales of \$165 million. Financial Products revenues decreased \$63 million.

Sales and Revenues by Geographic Region

	\$17,200	\$6,895	\$1,877	\$4,837	\$3,591

- 1 Does not include internal engines transfers of \$1,103 million and \$755 million in the six months ended June 30, 2010 and 2009, respectively. Internal engines transfers are valued at prices comparable to those for unrelated parties.
- 2 Does not include internal revenues earned from Machinery and Engines of \$126 million and \$174 million in the six months ended 2010 and 2009, respectively.

Table of Contents

Machinery Sales - Sales of \$11.995 billion increased \$2.315 billion, or 24 percent, from the six months ended June 30, 2009.

- Sales volume increased \$1.937 billion.
- Price realization increased \$246 million.
- Currency increased sales by \$132 million.
- Geographic mix between regions (included in price realization) was \$31 million unfavorable.
- Volume comparisons differed markedly between quarters. Volume declined in the first quarter due to dealers reporting lower deliveries to end users. In the second quarter, volume increased sufficiently to allow a large first-half gain.
- Dealer-reported inventories were about flat during the first half of 2010 compared with a reduction of about \$1.5 billion in the first half of 2009. Absence of the 2009 inventory change was the primary reason for higher sales volume.

North America Sales increased \$422 million, or 11 percent.

- Sales volume increased \$322 million.
- Price realization increased \$98 million.
- Currency increased sales by \$2 million.
- The gain in sales volume resulted from an increase in dealer deliveries to end users. This improvement occurred in response to low interest rates and some improvement in economic activity.

- U.S. housing starts averaged 14 percent higher than last year, and new home sales rose slightly. Sales of new single-family units outpaced starts, driving the inventory of unsold homes to a 40-year low. The Canadian housing recovery has been much stronger, with starts up 52 percent in the first half. These factors contributed to an increase in sales of smaller machines.
- U.S. nonresidential building contracting fell 20 percent due to weak commercial property prices and low industrial capacity utilization. Highway construction contracting increased 16 percent, benefiting from the Federal government's recovery program.
- Metals prices increased 62 percent, leading to a 3-percent increase in U.S. metals production. Gains were concentrated in the second quarter.
- Central Appalachian coal prices averaged 14 percent higher; however, a weak first quarter resulted in a 2-percent decline in U.S. coal production in the first half of 2010 compared to the first half of 2009. In contrast, Canadian production expanded 40 percent.

Latin America Sales increased \$672 million, or 55 percent.

- Sales volume increased \$521 million.
- Price realization increased \$75 million.
- Currency increased sales by \$76 million.
- Dealers reported increases in their inventories during the first half, a change from the large reduction made last year. This difference in inventory practices, taken to prepare for a better economic environment, accounted for the growth in sales volume.
- Factors underlying the improvement in volume included low interest rates, higher commodity prices and strong economic recoveries. Both construction spending and mining output improved.

Table of Contents

- Brazil was the biggest contributor to higher sales volume. Construction increased 15 percent in the first quarter, the latest data available, and mine production increased 18 percent.

EAME Sales increased \$90 million, or 4 percent.

- Sales volume increased \$111 million.
- Price realization decreased \$36 million.
- Currency increased sales by \$15 million.
- Sales volume increased due to a strong second quarter. Growth occurred because dealers reduced reported inventories much less than a year earlier. Better economic conditions encouraged dealers to alter their inventory practices.
- Sales volume increased in Europe and AME. In Europe low interest rates and some economic recovery contributed to the gain. An economic recovery in Turkey and higher oil prices led to growth in AME.

Asia/Pacific Sales increased \$1.131 billion, or 51 percent.

- Sales volume increased \$952 million.
- Price realization increased \$140 million.
- Currency increased sales by \$39 million.
- Dealers reported modest increases in their inventories in the first half of 2010 in contrast to reductions last year. This change was a significant contributor to the increased sales volume.

Edgar Filing: CATERPILLAR INC - Form 10-Q

- Dealers reported much higher deliveries to end users, further increasing sales volume. Asian economies were in strong economic recoveries, which benefited construction, and higher metals and coal prices encouraged investment in the mining industry. Sales volume increased in most countries.
- China had the largest increase in sales volume due to a strong economic recovery. The government's stimulus program, with its focus on infrastructure development, benefited construction.
- In Australia, higher coal prices caused mines to increase output, and housing benefited from better economic conditions. These factors contributed to the growth in sales volume.

Engines Sales Sales of \$5.279 billion decreased \$805 million, or 13 percent, from the six months ended June 30, 2009.

- Sales volume decreased \$951 million.
- Price realization increased \$113 million.
- Currency increased sales by \$33 million.
- Geographic mix between regions (included in price realization) was \$8 million favorable.
- Dealer-reported inventories and months of supply were down, as dealer deliveries declined.

North America Sales decreased \$259 million, or 12 percent.

- Sales volume decreased \$259 million.
- Price realization decreased \$1 million.

- Currency increased sales by \$1 million.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Table of Contents

- Sales for petroleum applications decreased 28 percent primarily due to a decline in sales of engines used for gas compression and drilling, partially offset by higher turbine sales.

- Sales for electric power applications decreased 24 percent due to weak industry demand and lower turbine sales.

- Sales for industrial applications increased 10 percent based on higher construction and infrastructure activity.

Latin America Sales increased \$36 million, or 7 percent.

- Sales volume increased \$19 million.

- Price realization increased \$9 million.

- Currency increased sales by \$8 million.

- Sales of electric power applications increased 59 percent due to higher turbine sales and increases in dealer inventories.

- Sales for petroleum applications decreased 17 percent due to lower turbine sales and a slowdown in demand for production power applications.

EAME Sales decreased \$583 million, or 25 percent.

- Sales volume decreased \$658 million.

- Price realization increased \$53 million.

Edgar Filing: CATERPILLAR INC - Form 10-Q

- Currency increased sales by \$22 million.
- Sales for electric power applications decreased 17 percent due to weak industry demand and dealer efforts to reduce inventory.
- Sales for petroleum applications decreased 43 percent primarily due to lower turbine sales as well as a slowdown in demand for engines used in production applications and land-based drilling.
- Sales for marine applications decreased 34 percent due to weak industry demand and a declining order backlog.
- Sales for industrial applications decreased 3 percent due to lower demand in construction and agricultural applications.

Asia/Pacific Sales increased \$1 million.

- Sales volume decreased \$45 million.
- Price realization increased \$44 million.
- Currency increased sales by \$2 million.
- Sales for electric power applications increased by 11 percent due to higher turbine sales.
- Sales for industrial applications increased 56 percent primarily due to increased demand from Original Equipment Manufacturers (OEMs).
- Sales for marine applications decreased 16 percent due to weak industry demand, partially offset by higher sales for workboat and general cargo vessels.
- Sales for petroleum applications decreased 4 percent primarily due to lower turbine sales and continued slowdown in Chinese land-based drill activity.

Table of Contents

Financial Products Revenues - Revenues of \$1.373 billion decreased \$63 million, or 4 percent, from the six months ended June 30, 2009.

- Revenues decreased \$112 million due to a decrease in average earning assets, partially offset by an increase of \$30 million due to the favorable impact of higher interest rates on new and existing finance receivables.
- Other revenues at Cat Financial increased \$14 million. The increase was due to the absence of \$31 million in write-downs on retained interests related to the securitized asset portfolio in 2009, partially offset by the unfavorable impact from various other revenue items.

OPERATING PROFIT

The chart above graphically illustrates reasons for the change in Consolidated Operating Profit between six months ended June 30, 2009 (at left) and six months ended June 30, 2010 (at right). Items favorably impacting operating profit appear as upward stair steps with the corresponding dollar amounts above each bar, while items negatively impacting operating profit appear as downward stair steps with dollar amounts reflected in parentheses above each bar. Caterpillar management utilizes these charts internally to visually communicate with the company's Board of Directors and employees. The bar entitled Other/M&E Redundancy includes the operating profit impact of consolidating adjustments and Machinery and Engines other operating (income) expenses, which include

Edgar Filing: CATERPILLAR INC - Form 10-Q

Machinery and Engines redundancy costs.

Operating profit for the six months ended June 30, 2010 was \$1.485 billion compared to \$172 million for the six months ended June 30, 2009. The improvement was primarily the result of lower manufacturing costs, absence of 2009 redundancy costs and better price realization. The improvements were partially offset by higher SG&A and R&D expenses, lower sales volume, which includes the impact of an unfavorable mix of products, and the negative impact of currency.

Manufacturing costs improved \$882 million primarily due to lower labor and overhead, warranty and material costs, partially offset by the absence of LIFO inventory decrement benefits of \$110 million.

SG&A and R&D expenses increased by \$246 million primarily due to provisions related to incentive pay and increased expense to support product development programs related to EPA Tier 4 emissions requirements.

Currency had a \$115 million negative impact on operating profit as the negative impact on costs more than offset the benefit to sales.

Redundancy costs were \$643 million for the six months ended June 30, 2009.

Table of Contents

Operating Profit (Loss) by Principal Line of Business

(Millions of dollars)	Six Months Ended June 30, 2010	Six Months Ended June 30, 2009	\$ Change	% Change
Machinery ¹	\$671	\$(761)	\$1,432	
Engines ¹	726	853	(127)	(15)%
Financial Products	189	226	(37)	(16)%
Consolidating Adjustments	(101)	(146)	45	
Consolidated Operating Profit	\$1,485	\$172	\$1,313	763%

¹ Caterpillar operations are highly integrated; therefore, the company uses a number of allocations to determine lines of business operating profit for Machinery and Engines.

Operating Profit/Loss by Principal Line of Business

- **Machinery** operating profit was \$671 million compared to an operating loss of \$761 million for the six months ended June 30, 2009. Positive factors included lower manufacturing costs (despite the absence of LIFO decrement benefits), absence of 2009 redundancy costs, higher sales volume, which includes the impact of an unfavorable mix of products, and improved price realization. These improvements were partially offset by higher SG&A and R&D expenses and the negative impact of currency.
- **Engines** operating profit of \$726 million was down \$127 million from the six months ended June 30, 2009. Lower sales volume and higher SG&A and R&D expenses were partially offset by the absence of 2009 redundancy costs, lower manufacturing costs and improved price realization.
- **Financial Products** operating profit of \$189 million was down \$37 million from the six months ended June 30, 2009. The decrease was primarily attributable to a \$51 million unfavorable impact from lower average earning assets, a \$21 million increase in SG&A expenses (excluding the provision for credit losses) and a \$14 million increase in the provision for credit losses at Cat Financial, offset by the absence of \$31 million in write-downs on retained interests related to the securitized asset portfolio in 2009 and an \$18 million favorable impact from increased net yield on average earning assets.

Other Profit/Loss Items

- **Interest expense excluding Financial Products** decreased \$27 million from the six months ended June 30, 2009.

Edgar Filing: CATERPILLAR INC - Form 10-Q

- **Other income/expense** was income of \$113 million compared with income of \$227 million in the six months ended June 30, 2009. The decrease was primarily driven by an unfavorable impact from currency exchange gains and losses.

- **The provision for income taxes** for the first six months of 2010 reflects an estimated annual effective tax rate of 29 percent, excluding the items discussed below, compared to an actual tax rate of negative 20.5 percent for the first six months of 2009. The 2010 estimated annual tax rate is expected to be less than the U.S. tax rate of 35 percent primarily due to profits in tax jurisdictions with rates lower than the U.S. rate. The 2010 estimated annual tax rate is based on current tax law and therefore does not include the U.S. research and development tax credit and other benefits that have not been extended past 2009.

The provision for income taxes for 2010 also includes a deferred tax charge of \$90 million due to the enactment of U.S. healthcare legislation effectively making government subsidies received for Medicare equivalent prescription drug coverage taxable. Guidance on accounting for income taxes requires that the deferred tax effects of changes in laws be reflected in the financial statements in the period in which the legislation is enacted regardless of the effective date. Deferred tax assets had previously been recorded based on the liability for other postretirement benefits without regard to the tax-free subsidy. As a result of the law change, deferred tax assets were reduced to reflect the expected future income tax on the subsidy. Beginning in 2013, a cash tax cost will be incurred when the subsidies received increase taxable income.

This deferred tax charge was offset by a \$34 million benefit related to the recognition of refund claims for prior tax years and a \$26 million benefit for the release of a valuation allowance against the deferred tax assets of certain non-U.S. entities due to tax planning actions implemented in the second quarter of 2010.

Table of Contents

- **Profit (loss) attributable to noncontrolling interests** negatively impacted profit by \$59 million from the six months ended June 30, 2009, primarily due to improved financial performance of Caterpillar Japan Ltd. (Cat Japan). We own two-thirds of Cat Japan, meaning one-third of its profits or losses are attributable to our partner, Mitsubishi Heavy Industries.

GLOSSARY OF TERMS

1. **Caterpillar Japan Ltd. (Cat Japan)** A Caterpillar subsidiary formerly known as Shin Caterpillar Mitsubishi Ltd. (SCM). SCM was a 50/50 joint venture between Caterpillar and Mitsubishi Heavy Industries Ltd. (MHI) until SCM redeemed one half of MHI's shares on August 1, 2008. Caterpillar now owns 67 percent of the renamed entity. We began consolidating Cat Japan in the fourth quarter of 2008.
2. **Caterpillar Production System** The Caterpillar Production System is the common Order-to-Delivery process being implemented enterprise-wide to achieve our safety, quality, velocity, earnings and growth goals for 2010 and beyond.
3. **Consolidating Adjustments** Eliminations of transactions between Machinery and Engines and Financial Products.
4. **Currency** With respect to sales and revenues, currency represents the translation impact on sales resulting from changes in foreign currency exchange rates versus the U.S. dollar. With respect to operating profit, currency represents the net translation impact on sales and operating costs resulting from changes in foreign currency exchange rates versus the U.S. dollar. Currency includes the impact on sales and operating profit for the Machinery and Engines lines of business only; currency impacts on Financial Products revenues and operating profit are included in the Financial Products portions of the respective analyses. With respect to other income/expense, currency represents the effects of forward and option contracts entered into by the company to reduce the risk of fluctuations in exchange rates and the net effect of changes in foreign currency exchange rates on our foreign currency assets and liabilities for consolidated results.
5. **Debt-to-Capital Ratio** A key measure of financial strength used by both management and our credit rating agencies. The metric is a ratio of Machinery and Engines debt (short-term borrowings plus long-term debt) and redeemable noncontrolling interest to the sum of Machinery and Engines debt, redeemable noncontrolling interest and stockholders' equity.
6. **EAME** Geographic region including Europe, Africa, the Middle East and the Commonwealth of Independent States (CIS).
7. **Earning Assets** Assets consisting primarily of total finance receivables net of unearned income, plus equipment on operating leases, less accumulated depreciation at Cat Financial.
8. **Engines** A principal line of business including the design, manufacture, marketing and sales of engines for Caterpillar machinery; electric power generation systems; locomotives; marine, petroleum, construction, industrial, agricultural and other applications and related parts. Also includes remanufacturing of Caterpillar engines and a variety of Caterpillar machinery and engine components and remanufacturing services for other companies. Reciprocating engines meet power needs ranging from 10 to 21,800 horsepower (8 to more than 16 000 kilowatts). Turbines range from 1,600 to 30,000 horsepower (1 200 to 22 000 kilowatts).
9. **Financial Products** A principal line of business consisting primarily of Caterpillar Financial Services Corporation (Cat Financial), Caterpillar Insurance Holdings, Inc. (Cat Insurance) and their respective subsidiaries. Cat Financial provides a wide range of financing alternatives to customers and dealers for Caterpillar machinery and engines, Solar gas turbines as well as other equipment and marine vessels. Cat Financial also extends loans to customers and dealers. Cat Insurance provides various forms of insurance to customers and dealers to help support the purchase and lease of our equipment.
10. **Integrated Service Businesses** A service business or a business containing an important service component. These businesses include, but are not limited to, aftermarket parts, Cat Financial, Cat Insurance, Cat Logistics, Cat Reman, Progress Rail, OEM Solutions and Solar Turbine Customer Services.
11. **Latin America** Geographic region including Central and South American countries and Mexico.

Edgar Filing: CATERPILLAR INC - Form 10-Q

12. **LIFO Inventory Decrement Benefits** A significant portion of Caterpillar's inventory is valued using the last-in, first-out (LIFO) method. With this method, the cost of inventory is comprised of layers at cost levels for years when inventory increases occurred. A LIFO decrement occurs when inventory decreases, depleting layers added in earlier, generally lower cost, years. A

Table of Contents

LIFO decrement benefit represents the impact on profit of charging cost of goods sold with prior-year cost levels rather than current period costs.

13. **Machinery** A principal line of business which includes the design, manufacture, marketing and sales of construction, mining and forestry machinery track and wheel tractors, track and wheel loaders, pipelayers, motor graders, wheel tractor-scrapers, track and wheel excavators, backhoe loaders, log skidders, log loaders, off-highway trucks, articulated trucks, paving products, skid steer loaders, underground mining equipment, tunnel boring equipment and related parts. Also includes logistics services for other companies and the design, manufacture, remanufacture, maintenance and services of rail-related products.
14. **Machinery and Engines (M&E)** Due to the highly integrated nature of operations, it represents the aggregate total of the Machinery and Engines lines of business and includes primarily our manufacturing, marketing and parts distribution operations.
15. **Machinery and Engines Other Operating (Income) Expenses** Comprised primarily of gains/losses on disposal of long-lived assets, long-lived asset impairment charges and employee redundancy costs.
16. **Manufacturing Costs** Manufacturing costs exclude the impacts of currency and represent the volume-adjusted change for variable costs and the absolute dollar change for period manufacturing costs. Variable manufacturing costs are defined as having a direct relationship with the volume of production. This includes material costs, direct labor and other costs that vary directly with production volume such as freight, power to operate machines and supplies that are consumed in the manufacturing process. Period manufacturing costs support production but are defined as generally not having a direct relationship to short-term changes in volume. Examples include machinery and equipment repair, depreciation on manufacturing assets, facility support, procurement, factory scheduling, manufacturing planning and operations management.
17. **Price Realization** The impact of net price changes excluding currency and new product introductions. Consolidated price realization includes the impact of changes in the relative weighting of sales between geographic regions.
18. **Redundancy Costs** Costs related to employment reduction including employee severance charges, pension and other postretirement benefit plan curtailments and settlements and health care and supplemental unemployment benefits.
19. **Sales Volume** With respect to sales and revenues, sales volume represents the impact of changes in the quantities sold for machinery and engines as well as the incremental revenue impact of new product introductions. With respect to operating profit, sales volume represents the impact of changes in the quantities sold for machinery and engines combined with product mix the net operating profit impact of changes in the relative weighting of machinery and engines sales with respect to total sales.
20. **6 Sigma** On a technical level, 6 Sigma represents a measure of variation that achieves 3.4 defects per million opportunities. At Caterpillar, 6 Sigma represents a much broader cultural philosophy to drive continuous improvement throughout the value chain. It is a fact-based, data-driven methodology that we are using to improve processes, enhance quality, cut costs, grow our business and deliver greater value to our customers through black belt-led project teams. At Caterpillar, 6 Sigma goes beyond mere process improvement it has become the way we work as teams to process business information, solve problems and manage our business successfully.

LIQUIDITY AND CAPITAL RESOURCES

Sources of funds

We generate significant capital resources from operating activities, which are the primary source of funding for our Machinery and Engines operations. Funding for these businesses is also provided by commercial paper and long-term debt issuances. Financial Products operations are funded primarily from commercial paper, term debt issuances and collections from their existing portfolio. Throughout the first half of 2010, we continued to experience favorable liquidity conditions in both our Machinery and Engines and Financial Products operations. On a consolidated basis, we ended the first half of 2010 with \$3.6 billion of cash, a decrease of \$1.3 billion from year-end 2009. Our cash balances are held in numerous locations throughout the world. Most of the amounts held outside the U.S. could be repatriated to the U.S. but generally would be

subject to incremental U.S. income taxes.

Consolidated operating cash flow for the first half of 2010 was \$1.74 billion, down from \$2.80 billion for the same period a year ago. Improving economic conditions in the first half of 2010 compared with recessionary conditions a year ago have resulted in significant changes in the components of operating cash flow from 2009 to 2010. Operating cash flow in the first half of 2010 benefited from profit of consolidated and affiliated companies of \$969 million and an increase in accounts payable, reflecting higher levels of material purchases for production ramp-up to meet increasing demand. Offsetting these items were higher receivables

Table of Contents

resulting from improved sales volume, and an increase in inventory, also related to production ramp-up. The first half of 2009 benefited from significant declines in receivables and inventory, partially offset by lower accounts payable and changes in other working capital items. See further discussion of operating cash flow under Machinery and Engines and Financial Products.

Total debt as of June 30, 2010, was \$29.15 billion, a decrease of \$2.48 billion from year-end 2009. Debt related to Machinery and Engines decreased \$908 million in the first half of 2010. Debt related to Financial Products decreased \$1.57 billion reflecting declining portfolio balances at Cat Financial.

We have three global credit facilities with a syndicate of banks totaling \$6.99 billion (Credit Facility) available in the aggregate to both Caterpillar and Cat Financial to support their commercial paper programs in the event those programs become unavailable and for general liquidity purposes. Based on management's allocation decision, which can be revised from time to time, the portion of the Credit Facility available to Cat Financial as of June 30, 2010 was \$5.49 billion.

- The five-year facility of \$1.62 billion expires in September 2012.
- The five-year facility of \$2.98 billion expires in September 2011.
- The 364-day facility of \$2.39 billion expires in September 2010.

At June 30, 2010, Caterpillar's consolidated net worth was \$13.57 billion, which was above the \$9.00 billion required under the Credit Facility. The consolidated net worth is defined as the consolidated stockholder's equity including preferred stock but excluding the pension and other postretirement benefits balance within Accumulated other comprehensive income (loss).

At June 30, 2010, Cat Financial's covenant interest coverage ratio was 1.27 to 1. This is above the 1.15 to 1 minimum ratio of (1) profit excluding income taxes, interest expense and net gain/(loss) from interest rate derivatives to (2) interest expense calculated at the end of each calendar quarter for the rolling four quarter period then most recently ended.

In addition, at June 30, 2010, Cat Financial's covenant leverage ratio was 7.21 to 1. This is below the maximum ratio of debt to net worth of 10 to 1, calculated (1) on a monthly basis as the average of the leverage ratios determined on the last day of each of the six preceding calendar months and (2) at each December 31 required by the Credit Facility.

In the event Caterpillar or Cat Financial does not meet one or more of their respective financial covenants under the Credit Facility in the future (and are unable to obtain a consent or waiver), the bank group may terminate the commitments allocated to the party that does not meet its covenants. Additionally, in such event, certain of Cat Financial's other lenders under other loan agreements where similar financial covenants or cross default provisions are applicable, may, at their election, choose to pursue remedies under those loan agreements, including accelerating the repayment of outstanding borrowings. At June 30, 2010, there were no borrowings under the Credit Facility.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Our total credit commitments as of June 30, 2010 were:

(Millions of dollars)	Consolidated	Machinery and Engines	Financial Products
Credit lines available:			
Global credit facilities	\$6,988	\$1,500	\$5,488
Other external	3,897	370	3,527
Total credit lines available	10,885	1,870	9,015
Less: Global credit facilities supporting commercial paper	(2,164)		(2,164)
Less: Utilized credit	(2,141)	(143)	(1,998)
Available credit	\$6,580	\$1,727	\$4,853

Other consolidated credit lines with banks as of June 30, 2010 totaled \$3.90 billion. These credit lines, which may be eligible for renewal at various future dates or have no specified expiration date, are used primarily by our subsidiaries for local funding requirements. Caterpillar or Cat Financial may guarantee subsidiary borrowings under these lines.

In the event that Caterpillar or Cat Financial, or any of their debt securities, experiences a credit rating downgrade it would likely result in an increase in our borrowing costs and make access to certain credit markets more difficult. While we expect global economic conditions to continue to improve in 2010, in the event they deteriorate from current levels or access to debt markets becomes unavailable, our Machinery and Engines operations would rely on cash flow from operations, use of existing cash balances, borrowings from Cat Financial and access to our Credit Facility. Our Financial Products operations would rely on cash flow from its existing portfolio, utilization of existing cash balances, access to our Credit Facility and other credit line facilities held by Cat Financial and potential borrowings from Caterpillar. In addition, Caterpillar maintains a support agreement with Cat Financial, which

Table of Contents

requires Caterpillar to remain the sole owner of Cat Financial and may, under certain circumstances, require Caterpillar to make payments to Cat Financial should Cat Financial fail to maintain certain financial ratios.

Machinery and Engines

Net cash provided by operating activities was \$2.36 billion in the first half of 2010 compared to \$583 million in the first half of 2009. The change was primarily due to increased profit and a \$600 million dividend from Cat Financial in the first quarter of 2010. Profit of consolidated and affiliated companies in the first half of 2010 was \$964 million compared to \$221 million for the same period a year ago. Improving economic conditions in the first half of 2010 compared with recessionary conditions a year ago have resulted in significant changes in the components of working capital from 2009 to 2010. During the first half of 2010, we experienced increased demand and a production ramp-up, resulting in an increase in accounts payable and customer advances, which was more than offset by increases in inventory and receivables. In the first half of 2009, we were executing our strategic trough plans as demand and production were decreasing. This resulted in significant decreases in inventory and receivables, which were partially offset by decreases in accounts payable and accrued expenses. Net cash used for investing activities in the first half of 2010 was \$1.15 billion compared to \$35 million for the same period in 2009. The change was due to loans to Cat Financial in 2010, compared with net payments from Cat Financial in 2009. Net cash used for financing activities in the first half of 2010 was \$1.51 billion, primarily a result of payments on long-term debt and dividend payments. During the same period in 2009, net cash used for financing activities was \$378 million, as proceeds from loans with Cat Financial of \$1.02 billion were offset by payments on short-term borrowings and dividends.

Our priorities for the use of cash are maintaining a strong financial position that helps protect our credit rating, providing capital to support growth, appropriately funding employee benefit plans, paying dividends and repurchasing common stock with excess cash.

Strong financial position A key measure of Machinery and Engines financial strength used by both management and our credit rating agencies is Machinery and Engines debt-to-capital ratio. Debt-to-capital is defined as short-term borrowings, long-term debt due within one year, redeemable noncontrolling interest and long-term debt due after one year (debt) divided by the sum of debt (including redeemable noncontrolling interest) and stockholders' equity. Debt also includes borrowings from Financial Products. The debt-to-capital ratio for Machinery and Engines was 41.9 percent at June 30, 2010 compared to 53.1 percent at June 30, 2009, within our target range of 35 to 45 percent. This strengthening financial position was a significant factor in the recent decision to increase our dividend by 5 percent. In addition to the debt-to-capital ratios, certain rating agencies have increased their focus on the extent to which Caterpillar and Cat Financial have cash and cash equivalents and unused credit lines available to meet short-term debt requirements. Caterpillar and Cat Financial have been taking this focus into account when planning for liquidity needs. This focus has resulted in higher cash balances for Caterpillar and Cat Financial.

Capital to support growth Capital expenditures during the first half of 2010 were \$492 million, an increase of \$50 million compared to the first half of 2009. We expect capital expenditures to be about \$1.8 billion in 2010, up from \$1.3 billion in 2009.

Appropriately funded employee benefit plans We contributed \$548 million to our pension plans in the first half of 2010 and we anticipate additional contributions of approximately \$450 million during the remainder of the year. In addition, beginning in June 2009, the company began funding the 401(k) match with company stock. This equated to a contribution of \$62 million (1 million shares) for the first half of 2010.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Paying dividends Dividends paid totaled \$527 million in the first half of 2010, representing 42 cents per share paid in the first and second quarters. Each quarter, our Board of Directors reviews the company's dividend and determines whether to increase, maintain or decrease the dividend for the applicable quarter. The Board evaluates the financial condition of the company and considers the economic outlook, corporate cash flow, the company's liquidity needs, and the health and stability of global credit markets to determine whether to maintain or change the quarterly dividend. On June 9, 2010, we increased the quarterly cash dividend 5 percent to 44 cents per share payable August 20, 2010 to stockholders of record at the close of business on July 20, 2010.

Common stock repurchases Pursuant to the February 2007 Board-authorized stock repurchase program, which expires on December 31, 2011, \$3.8 billion of the \$7.5 billion authorized was spent through 2008. As a result of the global economic recession, our stock repurchase program has been temporarily suspended since the first quarter of 2009. Basic shares outstanding as of June 30, 2010 were 630 million.

Table of Contents

Financial Products

Operating cash flow was \$370 million through the first half of 2010, compared with \$518 million for the same period a year ago. The decrease in operating cash flow was primarily related to the absence of cash proceeds from liquidated interest rate swaps. Net cash provided by investing activities was \$354 million through the first half of 2010, compared to \$1.98 billion for the same period in 2009. This change is primarily the result of lower collections of finance receivables, lower proceeds from the sale of finance receivables and higher additions to finance receivables at Cat Financial, partially offset by lower intercompany borrowings. Net cash used for financing activities was \$1.57 billion through the first half of 2010, compared to \$1.40 billion for the same period in 2009, primarily due to a \$600 million dividend payment to Caterpillar Inc. and lower debt issuances, partially offset by higher intercompany borrowings.

During the second quarter, overall portfolio quality began to show signs of improvement, as economic conditions around the world continued to improve. At the end of the second quarter of 2010, past dues were 5.33 percent, down from 6.06 percent at the end of the first quarter and 5.54 percent at the end of 2009. At the end of the second quarter of 2009, past dues were 5.53 percent. The reduction in past dues from year end is primarily due to the general improvement in global economic conditions. We expect gradual improvement in past dues during the remainder of 2010.

Bad debt write-offs, net of recoveries, were \$52 million for the second quarter of 2010, down \$3 million from the second quarter of 2009. Second-quarter 2010 annualized losses were 0.91 percent of the average retail portfolio compared to 0.89 percent for the second quarter of 2009 and 1.03 percent for the full-year 2009.

At the end of the second quarter of 2010, Cat Financial's allowance for credit losses was 1.70 percent of net finance receivables, increasing from 1.64 percent on December 31, 2009, and 1.55 percent at the end of the second quarter of 2009. As a result of new accounting guidance implemented during the first quarter of 2010, Cat Financial began consolidating securitized assets which had previously been off balance sheet. On January 1, 2010, the consolidation of these assets had the impact of increasing the allowance for credit losses by \$18 million and the total allowance as a percent of net finance receivables by 6 basis points. At the end of the second quarter of 2010, the allowance for credit losses totaled \$383 million, compared with \$377 million on December 31, 2009 and \$378 million at the end of the second quarter of 2009. The increase of \$5 million in allowance for credit losses year-over-year reflected a \$34 million increase associated with the higher allowance rate, partially offset by a \$29 million decrease due to a reduction in the overall net finance receivable portfolio.

Cat Financial continued to experience favorable liquidity conditions in all key global funding markets during the second quarter of 2010. Commercial Paper (CP) market liquidity and pricing continued to be favorable, with CP outstanding totaling \$2.2 billion at quarter-end supported by a \$5.5 billion revolving credit facility. During the second quarter of 2010, Cat Financial issued EUR 365 million, AUD 200 million and \$300 million in medium-term notes. Our second quarter 2010 CP, term debt issuance and year-to-date portfolio cash receipts have provided sufficient liquidity for operations.

CRITICAL ACCOUNTING POLICIES

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect reported amounts. The more significant estimates include: residual values for leased assets, fair values for goodwill

impairment tests, impairment of available-for-sale securities, warranty liability, stock-based compensation, reserves for product liability and insurance losses, postretirement benefits, post-sale discounts, credit losses and income taxes. We have incorporated many years of data into the determination of each of these estimates and we have not historically experienced significant adjustments. These assumptions are reviewed at least annually with the Audit Committee of the Board of Directors. Following are the methods and assumptions used in determining our estimates and an indication of the risks inherent in each.

Residual values for leased assets The residual values for Cat Financial's leased assets, which are based upon the estimated wholesale market value of leased equipment at the time of the expiration of the lease, are based on a careful analysis of historical wholesale market sales prices, projected forward on a level trend line without consideration for inflation or possible future pricing action. At the inception of the lease, residual values are derived from consideration of the following critical factors: market size and demand, any known significant market/product trends, total expected hours of usage, machine configuration, application, location, model changes, quantities and past re-marketing experience, third-party residual guarantees and contractual customer purchase options. During the term of the leases, residual amounts are monitored. If estimated market values reflect a non-temporary impairment due to economic factors, obsolescence or other adverse circumstances, the residuals are adjusted to the lower estimated values by a charge to earnings. For equipment on operating leases, the charge is recognized through depreciation expense. For finance leases, it is recognized through a reduction of finance revenue.

Table of Contents

Fair values for goodwill impairment tests We test goodwill for impairment annually, at the reporting unit level, and whenever events or circumstances make it likely that an impairment may have occurred, such as a significant adverse change in the business climate or a decision to sell all or a portion of a reporting unit. We perform our annual goodwill impairment test as of October 1 and monitor for interim triggering events on an ongoing basis.

Goodwill is reviewed for impairment utilizing a two-step process. The first step requires us to compare the fair value of each reporting unit to the respective carrying value, which includes goodwill. If the fair value of the reporting unit exceeds its carrying value, the goodwill is not considered impaired. If the carrying value is greater than the fair value, there is an indication that an impairment may exist and the second step is required. In step two, the implied fair value of the goodwill is calculated as the excess of the fair value of a reporting unit over the fair values assigned to its assets and liabilities. If the implied fair value of goodwill is less than the carrying value of the reporting unit's goodwill, the difference is recognized as an impairment loss.

The impairment test process requires valuation of the respective reporting unit, which we primarily determine using an income approach based on a discounted five year forecasted cash flow with a year-five residual value. The residual value is computed using the constant growth method, which values the forecasted cash flows in perpetuity. The income approach is supported by a reconciliation of our calculated fair value for Caterpillar to the company's market capitalization. The assumptions about future cash flows and growth rates are based on each reporting unit's long-term forecast and are subject to review and approval by senior management. The discount rate is based on our weighted average cost of capital, which we believe approximates the rate from a market participant's perspective. The estimated fair value could be impacted by changes in market conditions, interest rates, growth rates, tax rates, costs, pricing and capital expenditures.

A prolonged economic downturn resulting in lower long-term growth rates and reduced long-term profitability may reduce the fair value of our reporting units. Industry specific events or circumstances that have a negative impact to the valuation assumptions may also reduce the fair value of our reporting units. Should such events occur and it becomes more likely than not that a reporting unit's fair value has fallen below its carrying value, we will perform an interim goodwill impairment test(s), in addition to the annual impairment test. Future impairment tests may result in a goodwill impairment, depending on the outcome of both step one and step two of the impairment review process. A goodwill impairment would be reported as a non-cash charge to earnings.

Impairment of available-for-sale securities Available-for-sale securities, primarily at Cat Insurance, are reviewed at least quarterly to identify fair values below cost which may indicate that a security is impaired and should be written down to fair value.

For debt securities, once a security's fair value is below cost we utilize data gathered by investment managers, external sources and internal research to monitor the performance of the security to determine whether an other-than-temporary impairment has occurred. These reviews, which include an analysis of whether it is more likely than not that we will be required to sell the security before its anticipated recovery, consist of both quantitative and qualitative analysis and require a degree of management judgment. Securities in a loss position are monitored and assessed at least quarterly based on severity of loss and may be deemed other-than-temporarily impaired at any time. Once a security's fair value has been twenty percent or more below its original cost for six consecutive months, the security will be other-than-temporarily impaired unless there are sufficient facts and circumstances supporting otherwise.

For equity securities in a loss position, determining whether the security is other-than-temporarily impaired requires an analysis of the securities historical sector returns and volatility. This information is utilized to estimate the security's future fair value to assess whether the security has the ability to recover to its original cost over a reasonable period of time as follows:

- Historical annualized sector returns over a two-year period are analyzed to estimate the security's fair value over the next two years.
- The volatility factor for the security is applied to the sector historical returns to further estimate the fair value of the security over the next two years.

In the event the estimated future fair value is less than the original cost, qualitative factors are then considered in determining whether a security is other-than-temporarily impaired, which includes reviews of the following: significant changes in the regulatory, economic or technological environment of the investee, significant changes in the general market condition of either the geographic area or the industry in which the investee operates, and length of time and the extent to which the fair value has been less than cost. These qualitative factors are subjective and require a degree of management judgment.

Warranty liability At the time a sale is recognized, we record estimated future warranty costs. The warranty liability is determined by applying historical claim rate experience to the current field population and dealer inventory. Generally, historical claim rates are based on actual warranty experience for each product by machine model/engine size. Specific rates are developed for

Table of Contents

each product build month and are updated monthly based on actual warranty claim experience. Warranty costs may differ from those estimated if actual claim rates are higher or lower than our historical rates.

Stock-based compensation We use a lattice-based option-pricing model to calculate the fair value of our stock options and SARs. The calculation of the fair value of the awards using the lattice-based option-pricing model is affected by our stock price on the date of grant as well as assumptions regarding the following:

- Volatility is a measure of the amount by which the stock price is expected to fluctuate each year during the expected term of the award and is based on historical and current implied volatilities from traded options on Caterpillar stock. The implied volatilities from traded options are impacted by changes in market conditions. An increase in the volatility would result in an increase in our expense.
- The expected term represents the period of time that awards granted are expected to be outstanding and is an output of the lattice-based option-pricing model. In determining the expected term of the award, future exercise and forfeiture patterns are estimated from Caterpillar employee historical exercise behavior. These patterns are also affected by the vesting conditions of the award. Changes in the future exercise behavior of employees or in the vesting period of the award could result in a change in the expected term. An increase in the expected term would result in an increase to our expense.
- The weighted-average dividend yield is based on Caterpillar's historical dividend yields. As holders of stock-based awards do not receive dividend payments, this could result in employees retaining the award for a longer period of time if dividend yields decrease or exercising the award sooner if dividend yields increase. A decrease in the dividend yield would result in an increase in our expense.
- The risk-free interest rate is based on the U.S. Treasury yield curve in effect at time of grant. As the risk-free interest rate increases, the expected term increases, resulting in an increase in our expense.

The fair value of our RSUs is determined by reducing the stock price on the date of grant by the present value of the estimated dividends to be paid during the vesting period. The estimated dividends are based on Caterpillar's weighted-average dividend yields. A decrease in the dividend yield would result in an increase in our expense.

Stock-based compensation expense recognized during the period is based on the value of the number of awards that are expected to vest. In determining the stock-based compensation expense to be recognized, a forfeiture rate is applied to the fair value of the award. This rate represents the number of awards that are expected to be forfeited prior to vesting and is based on Caterpillar employee historical behavior. Changes in the future behavior of employees could impact this rate. A decrease in this rate would result in an increase in our expense.

Product liability and insurance loss reserve We determine these reserves based upon reported claims in process of settlement and actuarial estimates for losses incurred but not reported. Loss reserves, including incurred but not reported reserves, are based on estimates and ultimate settlements may vary significantly from such estimates due to increased claims frequency or severity over historical levels.

Postretirement benefits Primary actuarial assumptions were determined as follows:

- The U.S. expected long-term rate of return on plan assets is based on our estimate of long-term passive returns for equities and fixed income securities weighted by the allocation of our plan assets. Based on historical performance, we increase the passive returns due to our active management of the plan assets. A similar process is used to determine the rate for our non-U.S. pension plans. This rate is impacted by changes in general market conditions, but because it represents a long-term rate, it is not significantly impacted by short-term market swings. Changes in our allocation of plan assets would also impact this rate. For example, a shift to more fixed income securities would lower the rate. A decrease in the rate would increase our expense.
- The assumed discount rate is used to discount future benefit obligations back to today's dollars. The U.S. discount rate is based on a benefit cash flow-matching approach and represents the rate at which our benefit obligations could effectively be settled as of our measurement date, December 31. The benefit cash flow-matching approach involves analyzing Caterpillar's projected cash flows against a high quality bond yield curve, calculated using a wide population of corporate Aa bonds available on the measurement date. The very highest and lowest yielding bonds (top and bottom 10 percent) are excluded from the analysis. A similar approach is used to determine the assumed discount rate for our most significant non-U.S. plans. This rate is sensitive to changes in interest rates. A decrease in the discount rate would increase our obligation and future expense.

Table of Contents

- The expected rate of compensation increase is used to develop benefit obligations using projected pay at retirement. It represents average long-term salary increases. This rate is influenced by our long-term compensation policies. An increase in the rate would increase our obligation and expense.
- The assumed health care trend rate represents the rate at which health care costs are assumed to increase and is based on historical and expected experience. Changes in our projections of future health care costs due to general economic conditions and those specific to health care (e.g., technology driven cost changes) will impact this trend rate. An increase in the trend rate would increase our obligation and expense.

Post-sale discount reserve We provide discounts to dealers through merchandising programs. We have numerous programs that are designed to promote the sale of our products. The most common dealer programs provide a discount when the dealer sells a product to a targeted end user. The amount of accrued post-sale discounts was \$692 million and \$662 million as of June 30, 2010 and December 31, 2009 respectively. The reserve represents discounts that we expect to pay on previously sold units and is reviewed at least quarterly. The reserve is adjusted if discounts paid differ from those estimated. Historically, those adjustments have not been material.

Credit loss reserve Management's ongoing evaluation of the adequacy of the allowance for credit losses considers both impaired and unimpaired finance receivables and takes into consideration past loss experience, known and inherent risks in the portfolio, adverse situations that may affect the borrower's ability to repay, estimated value of underlying collateral and current economic conditions. In estimating probable losses we review accounts that are past due, non-performing, in bankruptcy or otherwise identified as at risk for potential credit loss including accounts which have been modified. Accounts are identified as at risk for potential credit loss using information available about the customer, such as financial statements, news reports and published credit ratings as well as general information regarding industry trends and the general economic environment.

The allowance for credit losses attributable to specific accounts is based on the most probable source of repayment, which is normally the liquidation of collateral. In determining collateral value we estimate current fair value of collateral and factor in credit enhancements such as additional collateral and third-party guarantees. The allowance for credit losses attributable to the remaining accounts is a general allowance based upon the risk in the portfolio, primarily using probabilities of default and an estimate of associated losses. In addition, qualitative factors not able to be fully captured in previous analysis including industry trends, macroeconomic factors and model imprecision are considered in the evaluation of the adequacy of the allowance for credit losses. These qualitative factors are subjective and require a degree of management judgment.

While management believes it has exercised prudent judgment and applied reasonable assumptions, there can be no assurance that in the future, changes in economic conditions or other factors would not cause changes in the financial health of our customers. If the financial health of our customer deteriorates, the timing and level of payments received could be impacted and therefore, could result in a change to our estimated losses.

Income tax reserve We are subject to the income tax laws of the many jurisdictions in which we operate. These tax laws are complex, and the manner in which they apply to our facts is sometimes open to interpretation. In establishing the provision for income taxes, we must make judgments about the application of these inherently complex tax laws.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Despite our belief that our tax return positions are consistent with applicable tax laws, we believe that taxing authorities could challenge certain positions. Settlement of any challenge can result in no change, a complete disallowance, or some partial adjustment reached through negotiations or litigation. We record tax benefits for uncertain tax positions based upon management's evaluation of the information available at the reporting date. To be recognized in the financial statements, a tax benefit must be at least more likely than not of being sustained based on technical merits. The benefit for positions meeting the recognition threshold is measured as the largest benefit more likely than not of being realized upon ultimate settlement with a taxing authority that has full knowledge of all relevant information. Significant judgment is required in making these determinations and adjustments to unrecognized tax benefits may be necessary to reflect actual taxes payable upon settlement. Adjustments related to positions impacting the effective tax rate affect the provision for income taxes. Adjustments related to positions impacting the timing of deductions impact deferred tax assets and liabilities.

Our income tax positions and analysis are based on currently enacted tax law. Future changes in tax law could significantly impact the provision for income taxes, the amount of taxes payable, and the deferred tax asset and liability balances. Deferred tax assets generally represent tax benefits for tax deductions or credits available in future tax returns. Certain estimates and assumptions are required to determine whether it is more likely than not that all or some portion of the benefit of a deferred tax asset will not be realized. In making this assessment, management analyzes and estimates the impact of future taxable income, reversing temporary differences and available prudent and feasible tax planning strategies. Should a change in facts or circumstances lead to a change in

Table of Contents

judgment about the ultimate realizability of a deferred tax asset, we record or adjust the related valuation allowance in the period that the change in facts and circumstances occurs, along with a corresponding increase or decrease in the provision for income taxes.

A provision for U.S. income taxes has not been recorded on undistributed profits of our non-U.S. subsidiaries that we have determined to be indefinitely reinvested outside the U.S. If management intentions or U.S. tax law changes in the future, there may be a significant negative impact on the provision for income taxes in the period the change occurs.

EMPLOYMENT

Caterpillar's worldwide employment was 97,487 at the end of the second quarter of 2010. Year to date in 2010 we have added about 3,650 employees, primarily due to increases in production. About 1,250 of the additional employees were in the United States, and about 2,400 were outside the United States.

OTHER MATTERS

Environmental and Legal Matters

The company is regulated by federal, state and international environmental laws governing our use, transport and disposal of substances and control of emissions. In addition to governing our manufacturing and other operations, these laws often impact the development of our products, including, but not limited to, required compliance with air emissions standards applicable to internal combustion engines. Compliance with these existing laws has not had a material impact on our capital expenditures, earnings or global competitive position.

We are engaged in remedial activities at a number of locations, often with other companies, pursuant to federal and state laws. When it is probable we will pay remedial costs at a site and those costs can be reasonably estimated, the costs are charged against our earnings. In formulating that estimate, we do not consider amounts expected to be recovered from insurance companies or others. The amount recorded for environmental remediation is not material and is included in Accrued expenses in the Consolidated Statement of Financial Position.

We cannot reasonably estimate costs at sites in the very early stages of remediation. Currently, we have a few sites in the very early stages of remediation, and there is no more than a remote chance that a material amount for remedial activities at any individual site, or at all sites in the aggregate, will be required.

We have disclosed certain individual legal proceedings in this filing. Additionally, we are involved in other unresolved legal actions that arise in the normal course of business. The most prevalent of these unresolved actions involve disputes related to product design, manufacture and performance liability (including claimed asbestos and welding fumes exposure), contracts, employment issues, environmental matters or

Edgar Filing: CATERPILLAR INC - Form 10-Q

intellectual property rights. Although it is not possible to predict with certainty the outcome of these unresolved legal actions, we believe that these actions will not individually or in the aggregate have a material adverse effect on our consolidated results of operations, financial position or liquidity.

On May 14, 2007, the U.S. Environmental Protection Agency (EPA) issued a Notice of Violation to Caterpillar Inc., alleging various violations of Clean Air Act Sections 203, 206 and 207. EPA claims that Caterpillar violated such sections by shipping engines and catalytic converter after-treatment devices separately, introducing into commerce a number of uncertified and/or misbuilt engines, and failing to timely report emissions-related defects. Caterpillar is currently engaged in negotiations with EPA and the U.S. Department of Justice to resolve these issues. On July 9, 2010, the Department of Justice issued a penalty demand to Caterpillar seeking a civil penalty of \$3.2 million and implementation of injunctive relief involving expanded use of certain technologies. Caterpillar continues to cooperate with EPA and the Department of Justice and, while penalties will likely exceed \$100,000, management does not believe that this issue will have a material adverse impact on our consolidated results of operations, financial position or liquidity.

On February 8, 2009, an incident at Caterpillar's Joliet, Illinois facility resulted in the release of approximately 3,000 gallons of wastewater into the Des Plaines River. In coordination with state and federal authorities, appropriate remediation measures have been taken. On February 23, 2009, the Illinois Attorney General filed a Complaint in Will County Circuit Court containing seven counts of violations of state environmental laws and regulations. Each count seeks injunctive relief, as well as statutory penalties of \$50,000 per violation and \$10,000 per day of violation. In addition, on March 5, 2009, the EPA served Caterpillar with a Notice of Intent to file a Civil Administrative Action (notice), indicating the EPA's intent to seek civil penalties for violations of the Clean Water Act and Oil Pollution Act. On January 25, 2010, the EPA issued a revised notice seeking civil penalties in the amount of \$167,800, and Caterpillar responded to the revised notice and is engaged in follow up discussions with the EPA. On March 8, 2010, the Illinois Attorney General submitted a demand to Caterpillar seeking a \$100,000 civil penalty. At this time, we do not believe these proceedings will have a material adverse impact on our consolidated results of operations, financial position or liquidity.

Table of Contents

Retirement Benefits

We recognized pension expense of \$154 million and \$310 million for the three and six months ended June 30, 2010, as compared to \$112 million and \$369 million for the three and six months ended June 30, 2009. The increase in expense for the three months ended June 30, 2010 was the result of increased amortization of net actuarial losses due to significant asset losses in 2008 and lower discount rates at the end of 2009. The decrease in expense for the six months ended June 30, 2010 was the result of \$139 million of curtailment, settlement and special termination benefit costs due to voluntary and involuntary separation programs (discussed below) recognized in 2009, partially offset by increased amortization of net actuarial losses due to significant asset losses in 2008 and lower discount rates at the end of 2009. Accounting guidance on retirement benefits requires companies to discount future benefit obligations back to today's dollars using a discount rate that is based on high-quality fixed-income investments. A decrease in the discount rate increases the pension benefit obligation, while an increase in the discount rate decreases the pension benefit obligation. This increase or decrease in the pension benefit obligation is recognized in Accumulated other comprehensive income (loss) and subsequently amortized into earnings as an actuarial gain or loss. The guidance also requires companies to use an expected long-term rate of asset return for computing current year pension expense. Differences between the actual and expected returns are also recognized in Accumulated other comprehensive income (loss) and subsequently amortized into earnings as actuarial gains and losses. As of June 30, 2010, total actuarial losses, recognized in Accumulated other comprehensive income (loss), related to pensions were \$6.11 billion. The majority of the actuarial losses are due to significant asset losses during 2008 in addition to losses resulting from other demographic and economic assumptions over the past several years.

Other postretirement benefit expense was \$50 million and \$99 million for the three and six months ended June 30, 2010, as compared to \$52 million and \$180 million for the three and six months ended June 30, 2009. The decrease in expense for the six months ended June 30, 2010 is due to curtailment losses of \$62 million recognized in 2009 as a result of employee separation programs (discussed below) and the impact of amendments to our U.S. support and management other postretirement benefit plan (discussed below) on 2010 expense. Actuarial losses, recognized in Accumulated other comprehensive income (loss), for other postretirement benefit plans were \$643 million at June 30, 2010. These losses mainly reflect several years of declining discount rates and significant asset losses during 2008, partially offset by gains from lower than expected health care costs.

Actuarial losses for both pensions and other postretirement benefits will be impacted in future periods by actual asset returns, actual health care inflation, discount rate changes, actual demographic experience and other factors that impact these expenses. These losses, reported in Accumulated other comprehensive income (loss), will be amortized as a component of net periodic benefit cost on a straight-line basis over the average remaining service period of active employees expected to receive benefits under the benefit plans. At the end of 2009, the average remaining service period of active employees was 11 years for our U.S. pension plans, 11 years for our non-U.S. pension plans and 7 years for other postretirement benefit plans. We expect our amortization of net actuarial losses to increase approximately \$150 million in 2010 as compared to 2009, primarily due to significant asset losses in 2008 and a decrease in the discount rate during 2009.

First quarter 2009 voluntary and involuntary separation programs impacted employees participating in U.S. and non-U.S. pension and other postretirement benefit plans. Due to the significance of these events, certain plans were re-measured as of January 31 and March 31, 2009. Re-measurements for U.S. separation programs resulted in curtailment losses of \$124 million to pension and \$61 million to other postretirement benefit plans. Special termination benefits of \$6 million were also recognized for a U.S. pension early retirement program. Re-measurements for non-U.S. separation programs resulted in settlement losses of \$9 million to pension and curtailment losses of \$1 million to other postretirement benefit plans.

In March 2009, we amended our U.S. support and management other postretirement benefit plan. Beginning in 2010, certain retirees age 65 and older will enroll in individual health plans that work with Medicare and will no longer participate in a Caterpillar-sponsored group health plan. Instead, the retirees will be in individual health plans that work with Medicare, such as Medicare Advantage and Medicare Supplement

Edgar Filing: CATERPILLAR INC - Form 10-Q

plans. In addition, Caterpillar will fund a tax-advantaged Health Reimbursement Arrangement (HRA) to assist the retirees with medical expenses. The plan amendment required a plan re-measurement as of March 31, 2009, which resulted in a decrease in our Liability for postretirement benefits of \$432 million and an increase in Accumulated other comprehensive income (loss) of \$272 million net of tax. The plan was further amended in December 2009 to define the HRA benefit that active employees will receive once they are retired and reach age 65. The plan was re-measured at year-end 2009 and the December amendment resulted in a decrease in our Liability for postretirement benefits of \$101 million and an increase in Accumulated other comprehensive income (loss) of \$64 million net of tax. These decreases will be amortized into earnings on a straight-line basis over approximately 7 years, the average remaining service period of active employees in the plan. The amendments reduced other postretirement benefits expense by approximately \$28 million and \$55 million for the three and six months ended June 30, 2010 and reduced expense by approximately \$20 million for the three and six months ended June 30, 2009.

Edgar Filing: CATERPILLAR INC - Form 10-Q

Table of Contents

In March 2010, the Patient Protection and Affordable Care Act (the PPACA) and the Health Care and Education Reconciliation Act of 2010 (H.R. 4872) which amends certain provisions of the PPACA were signed into law. The Medicare Part D retiree drug subsidies effectively become taxable beginning in 2013.

We expect our total defined benefit expense to increase approximately \$150 million in 2010 as compared to 2009, excluding the impacts from the 2009 curtailment, settlement and special termination benefits discussed above. This increase in expense is primarily due to increased amortization of net actuarial losses due to significant asset losses in 2008 and a decrease in the discount rate during 2009, partially offset by an approximate \$110 million reduction in U.S. other postretirement benefits cost as a result of plan amendments.

We made \$548 million of contributions to our U.S. and non-U.S. pension plans during the six months ended June 30, 2010 and we currently anticipate additional contributions of approximately \$450 million during the remainder of the year, most of which are voluntary contributions. We believe we have adequate liquidity resources to fund both U.S. and non-U.S. plans. We made \$953 million of contributions to our U.S. and non-U.S. pension plans during the six months ended June 30, 2009, including a voluntary contribution to our U.S. plans of 18.2 million shares (\$650 million) in Caterpillar stock, held as treasury stock.

Employee Separation Charges

In 2009, we reported employee separation charges of \$481 million in Other operating (income) expenses in the Consolidated Statement of Results of Operations related to various voluntary and involuntary separation programs. These programs were in response to a sharp decline in sales volume due to the global recession.

For the three and six months ended June 30, 2010, we recognized employee separation charges of \$20 million in Other operating (income) expenses in the Consolidated Statement of Results of Operations primarily related to involuntary separations due to the streamlining of our corporate structure as announced in the second quarter. Also included in the second quarter of 2010 pretax stock-based compensation cost was \$17 million relating to the modification of awards resulting from separations due to the streamlining of our corporate structure as announced in the second quarter.

Our accounting for separations is dependent upon how the particular program is designed. For voluntary programs, eligible separation costs are recognized at the time of employee acceptance. For involuntary programs, eligible costs are recognized when management has approved the program, the affected employees have been properly identified and the costs are estimable.

The following table summarizes the 2009 and 2010 separation activity by geographic region:

	North	Machinery and Engines		Asia	Financial	
(Millions of dollars)	America	Latin America	EAME	Pacific	Products1	Total
Liability balance at December 31, 2008	\$4	\$2	\$5	\$	\$	\$11

Edgar Filing: CATERPILLAR INC - Form 10-Q

Increase in liability (separation charges) ²	\$323	\$15	\$102	\$31	\$10	\$481
Reduction in liability (payments and other adjustments)	(313)	(17)	(78)	(25)	(10)	(443)
Liability balance at December 31, 2009	\$14	\$	\$29	\$6	\$	\$49
Increase in liability (separation charges)	\$15	\$	\$2	\$3	\$	\$20
Reduction in liability (payments and other adjustments)	(13)		(16)	(6)		(35)
Liability balance at June 30, 2010	\$16	\$	\$15	\$3	\$	\$34

1 Includes \$8 million for North America and \$2 million for EAME.

2 Includes \$442 million for the six months ended June 30, 2009.

The remaining liability balances as of June 30, 2010 represent costs for employees that have either not yet separated from the Company or their full severance has not yet been paid. The majority of these remaining costs are expected to be paid during 2010.

In addition to the 2009 separation charges noted above, we reported \$225 million (\$201 million for the six months ended June 30, 2009) of costs associated with certain pension and other postretirement benefit plans, which were also recognized in Other operating (income) expenses in the Consolidated Statement of Results of Operations.

Table of Contents

The majority of the separation charges, made up primarily of cash severance payments, pension and other postretirement benefit costs, and stock-based compensation cost noted above were not assigned to operating segments. They are included in the reconciliation of total accountable profit from reportable segments to total profit (loss) before taxes.

Order Backlog

The dollar amount of backlog believed to be firm was approximately \$14.9 billion at June 30, 2010 and \$9.6 billion at December 31, 2009. Of the total backlog, approximately \$2.8 billion at June 30, 2010 and \$2.5 billion at December 31, 2009 was not expected to be filled in the following twelve months. Our backlog is generally highest in the first and second quarters because of seasonal buying trends in our industry.

NON-GAAP FINANCIAL MEASURES

The following definitions are provided for non-GAAP financial measures in connection with Item 10(e) of Regulation S-K issued by the Securities and Exchange Commission. These non-GAAP financial measures have no standardized meaning prescribed by U.S. GAAP and therefore are unlikely to be comparable to the calculation of similar measures for other companies. Management does not intend these items to be considered in isolation or substitutes for the related GAAP measures.

Profit Per Share Excluding Redundancy Costs

During the second quarter of 2009, we incurred redundancy costs of \$85 million before tax related to employment reductions in response to the global recession. Full-year 2009 redundancy costs were \$706 million before tax. We believe it is important to separately quantify the profit-per-share impact of redundancy costs in order for our 2009 results to be meaningful to our readers. Reconciliation of profit per share excluding redundancy costs to the most directly comparable GAAP measure, profit per share, is as follows:

	Second Quarter	First Half	Full Year
	2009	2009	2009
Profit per share	\$0.60	\$0.42	\$1.43
Per share redundancy costs	\$0.12	\$0.70	\$0.75
Profit per share excluding redundancy costs	\$0.72	\$1.12	\$2.18

SUPPLEMENTAL CONSOLIDATING DATA

We are providing supplemental consolidating data for the purpose of additional analysis. The data has been grouped as follows:

Consolidated Caterpillar Inc. and its subsidiaries.

Machinery and Engines The Machinery and Engines data contained in the schedules on pages 70 to 77 are non-GAAP financial measures as defined by the Securities and Exchange Commission in Item 10(e) of Regulation S-K. These non-GAAP financial measures have no standardized meaning prescribed by U.S. GAAP, and therefore, are unlikely to be comparable with the calculation of similar measures for other companies. Management does not intend these items to be considered in isolation or as a substitute for the related GAAP measures. Caterpillar defines Machinery and Engines as it is presented in the supplemental data as Caterpillar Inc. and its subsidiaries with Financial Products accounted for on the equity basis. Machinery and Engines information relates to our design, manufacturing, marketing and parts distribution operations. Financial Products information relates to the financing to customers and dealers for the purchase and lease of Caterpillar and other equipment. The nature of these businesses is different especially with regard to the financial position and cash flow items. Caterpillar management utilizes this presentation internally to highlight these differences. We also believe this presentation will assist readers in understanding our business.

Financial Products Our finance and insurance subsidiaries, primarily Cat Financial and Cat Insurance.

Consolidating Adjustments Eliminations of transactions between Machinery and Engines and Financial Products.

Pages 70 to 77 reconcile Machinery and Engines with Financial Products on the Equity Basis to Caterpillar Inc. consolidated financial information.

Table of Contents

2010 OUTLOOK

Economic Outlook

The worldwide economic recovery continued with strong growth in developing economies. We expect recovery to continue with worldwide economic growth of about 3.5 percent for 2010.

- Economic news in Europe and the United States has been less favorable recently, and concerns about a double-dip recession increased. However, this type of recession typically results from significant policy tightening very early in a recovery. We do not believe such a policy shift has occurred.
- Increased concern about the economic recovery should encourage central bankers to become even more cautious about tightening economic policies. As a result, we no longer expect central bankers to increase interest rates this year in the United States or the Euro-zone.
- Credit spreads have widened but remain well below averages sustained during the credit crisis. Spreads are generally consistent with continued economic recovery.
- We expect that developing economies will continue to drive the recovery and are forecasting economic growth in those regions of almost 7 percent in 2010. We also expect that developed economies will continue to lag and are forecasting economic growth of less than 2.5 percent in 2010.

Commodities

- Metals demand is increasingly concentrated in the developing economies, and their strong growth should keep prices favorable for increased production and investment. Our forecast is that copper prices will average more than \$3.00 per pound this year.
- Increases in oil prices have resulted in about 3 percent higher world oil production and a significant increase in active drill rigs. We project the West Texas Intermediate crude oil price will average about \$80 per barrel.

- The vigorous economic recovery in Asia, particularly China, has increased coal demand and supported a 40-percent increase in Australian coal prices compared to the first half of 2009. We forecast Australian thermal coal prices will average more than \$95 per metric ton, and Central Appalachian coal prices will average more than \$60 per ton. Coal prices at those levels should be high enough to encourage further increases in production.

Developing Economies

- Over the past several years, many developing countries have managed their economies well, achieving rapid economic growth without creating significant inflation problems. Most resumed economic growth in the second quarter of 2009, and we expect these countries to maintain continued growth through the end of the year.
- Asia/Pacific economies should continue to grow at the fastest pace, with growth of about 8.5 percent expected this year. Our forecast assumes China will grow 10.5 percent, India 8.5 percent and the remaining economies will average more than 6-percent growth.
- In response to concerns about slowing economic growth, China recently announced a program of more than \$100 billion of infrastructure development. We also expect China's central bank will hold interest rates steady this year.
- Consumer price inflation has increased in India, and India's central bank has raised interest rates three times so far this year. We expect two more rate increases in 2010, but expect only a moderate slowing in economic growth and construction spending.
- We forecast the Africa/Middle East economies will grow 4.5 percent in 2010. Positives include favorable metals and energy prices, low interest rates and strengthening recoveries in both South Africa and Turkey.
- The CIS economy should grow 4.5 percent this year. Interest rates have dropped sharply over the past year, helping the recovery to strengthen. The region should also benefit from higher commodity prices.

Table of Contents

- Recovery in Latin American economies continued to strengthen through the first half of 2010, and we expect the regional economy will grow 4.5 percent this year. Both construction and mining should continue to expand.

Developed Economies

- Very low inflation, weak credit demand, high unemployment and low capacity utilization indicate a low risk of growing inflation or asset price bubbles. As a result, we expect that central banks in the United States, the Euro-zone, the United Kingdom and Japan will hold interest rates steady for the remainder of the year.
- Our forecast of U.S. economic growth is 3 percent, and our estimate of housing starts is 675,000 units. Starts of that amount would be the second lowest since 1945. Nonresidential construction, which typically lags the economy, is expected to decline for the third consecutive year. Mining, largely benefiting from global commodity demand, should increase.
- We expect the Euro-zone will continue to lag behind other economies, with growth of more than 1 percent this year. While the government debt crisis has led to widening credit spreads, the European Central Bank appears to be providing enough liquidity to avoid a downturn. Construction, which peaked in late 2006, likely will be down for the year.
- The Bank of Japan continued to increase liquidity in the banking system, and the economy has grown 4.2 percent since the recession ended in the first quarter of 2009. That growth rate was the highest in nearly 20 years. We expect the central bank will increase liquidity further, fostering economic growth of more than 3 percent in 2010.

2010 Sales and Revenues Outlook

The outlook for sales and revenues is a range of \$39 to \$42 billion, up from the previous forecast of \$38 to \$42 billion. The increase in the sales outlook is a result of continuing improvement in end-user demand partially offset by the unfavorable impact of currency. Key elements of the 2010 sales and revenues outlook compared with 2009 include:

- At the midpoint of the revised 2010 sales and revenues range, we expect little change in dealer inventories. In 2009, dealers reduced inventories of new Caterpillar machines and engines by nearly \$4 billion. The absence of this reduction will result in higher sales for Caterpillar in 2010.
- Economic improvement in the developing economies of Asia/Pacific and Latin America is improving construction spending and increasing end-user demand for Machinery.

- Growth in the world economy is driving improved demand for commodities. Higher demand coupled with favorable commodity prices should be positive for mining-related sales in 2010. Mining-related order activity has remained robust, and we expect to increase production and sales as the year progresses.
- We expect that price realization will be positive by more than 1 percent in 2010.
- While Machinery sales are expected to increase in 2010, at the midpoint of the outlook range, Engines sales are expected to be about flat. Turbine sales in 2010 are expected to be near the record levels of 2009.

2010 Profit Outlook

Profit is expected to be in a range of \$3.15 to \$3.85 per share. The previous outlook expected profit in a range of \$2.50 to \$3.25 per share.

Key positive elements of the profit outlook for 2010 compared to 2009 include:

- Higher sales volume.
- In 2009, employee redundancy costs were \$706 million, or \$0.75 per share. We do not anticipate significant redundancy costs in 2010.
- We expect that price realization will be positive by more than 1 percent in 2010.

Table of Contents

- Improved operating efficiency resulting from higher production volume and continuing improvement from the *Caterpillar Production System* with *6 Sigma*.

- Material costs are expected to be favorable in 2010.

- Financial Products profit before tax is expected to be up slightly from 2009.

The key positive elements of the 2010 profit outlook are expected to be partially offset by:

- Product mix is expected to be unfavorable.
- Higher income taxes. We are forecasting income taxes to be an expense of about 29 percent of profit before tax plus the \$90 million charge in the first quarter related to signing of the U.S. health care legislation and discrete benefits of about \$60 million in the second quarter.
- Higher costs of about \$600 million related to incentive compensation due to improving financial performance.
- R&D expense is expected to increase primarily to support product development programs related to EPA Tier 4 emissions requirements.
- We are not forecasting LIFO inventory decrement benefits for 2010. LIFO decrement benefits in 2009 were \$300 million.
- We do not expect the favorable impact of currency that was in 2009's other income/expense to recur in 2010.
- Pension expense is expected to be higher in 2010.
- Depreciation expense is expected to increase. Machinery and Engines capital expenditures are expected to be about \$1.8 billion in 2010, up from \$1.3 billion in 2009.

- Diluted shares outstanding are expected to be higher than the 2009 full-year average. This is a result of stock contributed to our employee benefit plans, as well as increased dilution related to the increase in the share price.

During the second quarter of 2010, we signed a definitive agreement to acquire Electro-Motive Diesel (EMD). As this acquisition has not yet closed, our 2010 outlook does not include any sales and revenues or profit impact related to EMD.

Forward-looking Statements

Certain statements in this Form 10-Q relate to future events and expectations and, as such, constitute forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. These statements are subject to known and unknown factors that may cause actual results of Caterpillar Inc. to be different from those expressed or implied in the forward-looking statements. Words such as believe, estimate, will be, will, would, expect, anticipate, plan, project, intend, could, should or other similar words or expressions forward-looking statements. All statements other than statements of historical fact are forward-looking statements, including, without limitation, statements regarding our outlook, projections, forecasts or trend descriptions. These statements do not guarantee future performance, and Caterpillar does not undertake to update its forward-looking statements.

It is important to note that actual results of the company may differ materially from those described or implied in such forward-looking statements based on a number of factors, including, but not limited to: (i) economic volatility in the global economy generally and in capital and credit markets; (ii) Caterpillar's ability to generate cash from operations, secure external funding for operations and manage liquidity needs; (iii) adverse changes in the economic conditions of the industries or markets Caterpillar serves; (iv) government regulations or policies, including those affecting interest rates, liquidity, access to capital and government spending on infrastructure development; (v) commodity price increases and/or limited availability of raw materials and component products, including steel; (vi) compliance costs associated with environmental laws and regulations; (vii) Caterpillar's and Cat Financial's ability to maintain their respective credit ratings, material increases in either company's cost of borrowing or an inability of either company to access capital markets; (viii)

Table of Contents

financial condition and credit worthiness of Cat Financial's customers; (ix) material adverse changes in our customers' access to liquidity and capital; (x) market acceptance of Caterpillar's products and services; (xi) effects of changes in the competitive environment, which may include decreased market share, lack of acceptance of price increases, and/or negative changes to our geographic and product mix of sales; (xii) Caterpillar's ability to successfully implement Caterpillar Production System or other productivity initiatives; (xiii) international trade and investment policies, such as import quotas, capital controls or tariffs; (xiv) failure of Caterpillar or Cat Financial to comply with financial covenants in their respective credit facilities; (xv) adverse changes in sourcing practices for our dealers or original equipment manufacturers; (xvi) additional tax expense or exposure; (xvii) political and economic risks associated with our global operations, including changes in laws, regulations or government policies, currency restrictions, restrictions on repatriation of earnings, burdensome tariffs or quotas, national and international conflict, including terrorist acts and political and economic instability or civil unrest in the countries in which Caterpillar operates; (xviii) currency fluctuations, particularly increases and decreases in the U.S. dollar against other currencies; (xix) increased payment obligations under our pension plans; (xx) inability to successfully integrate and realize expected benefits from acquisitions; (xxi) significant legal proceedings, claims, lawsuits or investigations; (xxii) imposition of significant costs or restrictions due to the enactment and implementation of health care reform legislation and proposed financial regulation legislation; (xxiii) changes in accounting standards or adoption of new accounting standards; (xxiv) adverse effects of natural disasters; and (xxv) other factors described in more detail under Item 1A. Risk Factors in Part I of our Form 10-K filed with the SEC on February 19, 2010 for the year ended December 31, 2009 and in Part II of our Form 10-Q filed with the SEC on May 3, 2010 for the quarter ended March 31, 2010. These filings are available on our website at www.cat.com/sec_filings.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

The information required by this Item is incorporated by reference from Note 4 – Derivative Financial Instruments and Risk Management included in Part I, Item 1 and Management's Discussion and Analysis included in Part I, Item 2 of this Form 10-Q.

Item 4. Controls and Procedures

Evaluation of disclosure controls and procedures

An evaluation was performed under the supervision and with the participation of the company's management, including the Chief Executive Officer (CEO) and Chief Financial Officer (CFO), of the effectiveness of the design and operation of the company's disclosure controls and procedures as of the end of the period covered by this quarterly report. Based on that evaluation, the company's management, including the CEO and CFO, concluded that the company's disclosure controls and procedures are effective as of the end of the period covered by this quarterly report.

Changes in internal control over financial reporting

During the second quarter 2010, there has been no change in the company's internal control over financial reporting that has materially affected, or is reasonably likely to materially affect, the company's internal control over financial reporting.

PART II. OTHER INFORMATION

Item 1. Legal Proceedings

The information required by this Item is incorporated by reference from Note 12 included in Part I, Item 1 of this Form 10-Q.

Table of Contents**Item 2. Unregistered Sales of Equity Securities and Use of Proceeds****Issuer Purchases of Equity Securities**

No shares were repurchased during the second quarter 2010.

Other Purchases of Equity Securities

Period	Total Number of Shares Purchased¹	Average Price Paid per Share	Total Number of Shares Purchased Under the Program	Approximate Dollar Value of Shares that may yet be Purchased under the Program
April 1-30, 2010	1,490	\$59.13	NA	NA
May 1-31, 2010	1,629	\$65.28	NA	NA
June 1-30, 2010	1,366	\$60.43	NA	NA
Total	4,485	\$61.76		

1 Represents shares delivered back to issuer for the payment of taxes resulting from the vesting of restricted stock units and the exercise of stock options by employees and Directors.

Non-U.S. Employee Stock Purchase Plans

We have 30 employee stock purchase plans administered outside the United States for our non-U.S. employees. As of June 30, 2010, those plans had approximately 10,700 active participants in the aggregate. During the second quarter of 2010, approximately 225,000 shares of Caterpillar common stock or foreign denominated equivalents were distributed under the plans. Participants in some foreign plans have the option of receiving non-U.S. share certificates (foreign-denominated equivalents) in lieu of U.S. shares of Caterpillar common stock upon withdrawal from the plan. These equivalent certificates are tradable only on the local stock market and are included in our determination of shares outstanding.

Distributions of Caterpillar stock under the plans are exempt from registration under the Securities Act of 1933 (Act) pursuant to 17 CFR 230.903.
