NEWS RELEASE

FOR IMMEDIATE RELEASE

**TRANSGLOBE ENERGY CORPORATION ANNOUNCES UPDATE
ON REPUBLIC OF YEMEN OPERATIONS**

Wednesday, April 30, 2003 Calgary, Alberta - TransGlobe Energy Corporation (TransGlobe or the Company) (TSX symbol "TGL"; OTC-BB symbol "TGLEF") is pleased to announce a **successful development well at Tasour #9 on Block 32** in the Republic of Yemen.

Block 32, Yemen (13.81% working interest)

The Tasour #9 well was directionally drilled to test the eastern flank of the Tasour field extension defined by the Tasour #7 and Tasour #8 wells. The Tasour #9 well encountered the main Qishn S-1A producing zone and a second Qishn zone in a structurally high position, above the known oil/water contact. The well was placed on production into the central production facility and is currently producing at a rate of 7,500 barrels of fluid per day with an approximate water cut of 82% (approximately 1,500 barrels of oil per day). Additional evaluation work is planned to determine the source of the water production which may be from lower zones in the well. It is expected that the well will continue to produce at the current level which is similar to wells further down the structure. With the addition of Tasour #9, the Tasour field is currently producing approximately 19,500 Bopd (2,690 Bopd to TransGlobe).

The Tasour #7, #8 and #9 wells have changed the structural mapping of the Tasour field. The revised structural picture of the field has set up a number of potential exploration prospects to the west and the east of the Tasour field along the southern, bounding fault. Additional seismic reprocessing and remapping work is underway to select new exploration drilling locations for the future. It is anticipated the first of these locations will commence drilling in June 2003 as a potential western extension of the Tasour field.

Block S-1, Yemen (25.0% working interest)

The An Nagyah #4 well commenced drilling on April 16 to appraise the Upper Lam oil pool discovered in An Nagyah #2. An Nagyah #4 is located approximately 2.5 kilometers northwest of An Nagyah #2. The An Nagyah #2 well tested approximately 1,100 barrels per day of light oil from the Upper Lam (press released December 10, 2002). Results from An Nagyah #4 are expected in mid May.

This release includes certain statements that may be deemed to be forward-looking statements within the meaning of the US Private Securities Litigation Reform Act of 1995. All statements in this release, other than statements of historical facts, that address future production, reserve potential, exploration drilling, exploitation activities and events or developments that the Company expects, are forward-looking statements. Although TransGlobe believes the expectations expressed in such forward-looking statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in the forward-looking statements. Factors that could cause actual results to differ materially from those in forward-looking statements include oil and gas prices, exploitation and exploration successes, continued availability of capital and financing, and general economic, market or business conditions.
