ENCISION INC.

NOTES TO CONDENSED INTERIM FINANCIAL STATEMENTS

DECEMBER 31, 2003

(Unaudited)

(1) ORGANIZATION AND NATURE OF BUSINESS

Encision Inc. (the Company) is a medical device company that designs, develops, manufactures and markets patented surgical instruments that provide greater safety to patients undergoing minimally-invasive surgery. The Company believes its patented AEM® surgical instrument technology is changing the marketplace for electrosurgical devices and instruments by providing a solution to a patient safety risk in laparoscopic surgery. The Company's sales to date have been made principally in the United States.

The Company achieved profitable operations in fiscal 2003 but prior to that had incurred losses since its inception and has an accumulated deficit of \$15,191,454 at March 31, 2003. Operations have been financed primarily through issuance of common stock.

During fiscal year 2003, the Company achieved annual net income and positive cash flow for the first time in its history. The Company's strategic marketing and sales plan is designed to expand the use of the Company's products in surgically active hospitals in the United States. Management expects these efforts to result in continued revenue increases for fiscal 2004 which, combined with planned controlled operating expenses and consistent gross profit margins, are expected to maintain profitable operations and conserve the Company's cash resources.

On July 30, 2003 the Company issued a total of 333,334 shares of its common stock to the Wasatch Micro Cap Fund and the Wasatch Micro Cap Value Fund, for gross proceeds of \$1,000,002. Funds managed by Wasatch Advisors, Inc. held shares of the Company's common stock, constituting less than 5% of the issued and outstanding shares of its common stock, prior to that transaction.

(2) SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Use of Estimates in the Preparation of Financial Statements

Edgar Filing: ENCISION INC - Form 10QSB

The preparation of financial statements in conformity with accounting principles generally accepted in the United States requires management to make estimates and assumptions. Such estimates and assumptions affect the reported amounts of assets and liabilities as well as disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expense during the reporting period. Actual results could differ from those estimates.

Cash and Cash Equivalents

For purposes of reporting cash flows, the Company considers all cash and highly liquid investments with an original maturity of three months or less to be cash equivalents.

Fair Value of Financial Instruments

The Company's financial instruments consist of cash and cash equivalents and short-term trade receivables and payables. The carrying values of cash and cash equivalents and short-term receivables and payables approximate their fair value due to their short maturities.

Concentration of Credit Risk

The Company has no significant off-balance sheet concentrations of credit risk such as foreign exchange contracts, options contracts or other foreign hedging arrangements. The Company maintains the majority of its cash balances with two financial institutions in the form of demand deposits and money market funds.

Accounts receivables are typically unsecured and are derived from transactions with and from entities in the healthcare industry primarily located in the United States. Accordingly, the Company may be exposed to credit risk generally associated with the healthcare industry. The Company maintains allowances for doubtful accounts for estimated losses resulting from the inability of its customers to make required payments.

Edgar Filing: ENCISION INC - Form 10QSB

The net accounts receivable balance at December 31, 2003 of \$953,460 included \$107,344, or approximately 11%, from one distributor. The net accounts receivable balance at March 31, 2003 of \$959,808 included \$227,178, or approximately 24%, from one distributor.

Warranty Accrual

The Company provides for the estimated cost of product warranties at the time revenue is recognized. While the Company engages in extensive product quality programs and processes, including actively monitoring and evaluating the quality of its component suppliers, the Company's warranty obligation is based upon historical experience and is also affected by product failure rates and material usage incurred in correcting a product failure. Should actual product failure rates or material usage costs differ from the Company's estimates, revisions to the estimated warranty liability would be required.

Inventories

Inventories are stated at the lower of cost (first-in, first-out basis) or market. The Company reduces inventory for estimated obsolete or unmarketable inventory equal to the difference between the cost of inventory and the estimated market value based upon assumptions about future demand and market conditions. If actual market conditions are less favorable than those projected by management, additional inventory write-downs may be required. Inventory consisted of the following:

	December 31, 2003	March 31, 2003
Raw materials	\$ 911,408	\$ 627,243
Finished goods	322,702	372,080
	1,234,110	999,323
Less - Reserve for obsolescence	(90,000)	(68,000)
	\$ 1,144,110	\$ 931,323

Property and Equipment

Property and equipment are stated at cost, with depreciation computed primarily on a double-declining basis over the estimated useful life of the asset, generally three to five years. Company-owned AEM Monitors at customer sites are depreciated on a double-declining basis for a period of 5 years. Leasehold improvements are depreciated over the shorter of the remaining lease term or the estimated useful life of the asset. Maintenance and repairs are expensed as incurred and major additions, replacements and improvements are capitalized.

Long-Lived Assets

Edgar Filing: ENCISION INC - Form 10QSB

Long-lived assets are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. A long-lived asset is considered impaired when estimated future cash flows related to the asset, undiscounted and without interest, are insufficient to recover the carrying amount of the asset. If deemed impaired, the long-lived asset is reduced to its estimated fair value. Long-lived assets to be disposed of are reported at the lower of their carrying amount or estimated fair value less cost to sell.

Patents

The costs of applying for patents are capitalized and amortized on a straight-line basis over the lesser of the patent's economic or legal life (17 years in the United States). Capitalized costs are expensed if patents are not granted. The Company reviews the carrying value of its patents periodically to determine whether the patents have continuing value and such reviews could result in the conclusion that the recorded amounts have been impaired.

Accrued Liabilities

The Company has accrued \$115,000 related to warranty claims and \$69,278 related to sales commissions and has included these amounts in accrued liabilities in the accompanying balance sheets as of December 31, 2003.

Income Taxes

The Company accounts for income taxes under the provisions of Statement of Financial Accounting Standards (SFAS) No. 109, Accounting for Income Taxes (SFAS No. 109). SFAS No. 109 requires recognition of deferred income tax assets and liabilities

for the expected future income tax consequences, based on enacted tax laws, of temporary differences between the financial reporting and tax bases of assets and liabilities. SFAS No. 109 also requires recognition of deferred tax assets for the expected future tax effects of all deductible temporary differences, loss carryforwards and tax credit carryforwards. Deferred tax assets are then reduced, if deemed necessary, by a valuation allowance for the amount of any tax benefits which, more likely than not based on current circumstances, are not expected to be realized. For the Nine months ended December 31, 2003, the Company utilized net operating loss carryforwards to entirely offset its tax liability. As a result, no tax provision is reflected in the accompanying statements of operations. Should the Company achieve sufficient, sustained income in the future, the Company may conclude that some or all of the valuation allowance should be reversed.

Revenue Recognition

Revenue from product sales is recorded when the Company ships the product and title has passed to the customer, provided that the Company has evidence of a customer arrangement and can conclude that collection is probable. The Company's shipping policy is FOB Shipping Point. The Company recognizes revenue from sales to stocking distributors when there is no right of return, other than for normal warranty claims. The Company has no ongoing obligations related to product sales, except for normal warranty.

Research and Development Expenses

The Company expenses research and development costs for products and processes as incurred.

Stock-Based Compensation

The Company has adopted the disclosure-only provisions of SFAS No. 123, Accounting for Stock-Based Compensation (SFAS No. 123), and applies Accounting Principles Board Opinion No. 25, Accounting for Stock Issued to Employees (APB No. 25), and related interpretations in accounting for stock options granted to employees. If the Company had accounted for its stock-based compensation plans in accordance with SFAS 123, the Company's net income or loss and pro forma net income or loss per basic and diluted common share for the three and Nine months ended December 31, 2003 would have been reported as follows:

Three months ended December 31, 2003

Net Income (Loss)		
As Reported	\$	3,142
Stock-based compensation based upon estimated fair values		(42,558)
Pro forma	\$	(39,416)
Pro Forma Net Income (Loss) Per Basic and Diluted Common Share		
As Reported	\$	0.00
Pro Forma	\$	(0.01)

Edgar Filing: ENCISION INC - Form 10QSB

Nine months ended December 31, 2003

Net Income (Loss)		
As Reported	\$	69,882
Stock-based compensation based upon estimated fair values		(123,022)
Pro forma	\$	(53,140)
Pro Forma Net Income (Loss) Per Basic and Diluted Common Share		
As Reported	\$	0.01
Pro Forma	\$	(0.01)

Segment Reporting

The Company has concluded that it has one operating segment.

Basic and Diluted Income and Loss per Common Share

Net income or loss per share is calculated in accordance with SFAS No. 128, Earnings Per Share (SFAS No. 128). Under the provisions of SFAS No. 128, basic net income or loss per common share is computed by dividing net income or loss for the period by the weighted average number of common shares outstanding for the period. Diluted net income or loss per common share is computed by dividing the net income or loss for the period by the weighted average number of common and potential common shares outstanding during the period if the effect of the potential common shares is dilutive.

Edgar Filing: ENCISION INC - Form 10QSB

The following is a table that reconciles the numerators and denominators of the basic and diluted earnings per share:

	For the Three Months Ended December 31, 2003		
	Income (Numerator)	Shares (Denominator)	Per-Share Amount
Net income			
Basic EPS Income available to common stockholders	\$ 3,142	5,785,121	\$ 0.00
Effect of Dilutive Securities Stock Options		469,378	
Diluted EPS Income available to common stockholders + dilutive securities	\$ 3,142	6,254,499	\$ 0.00

	For the Nine Months Ended December 31, 2003		
	Income (Numerator)	Shares (Denominator)	Per-Share Amount
Net income			
Basic EPS Income available to common stockholders	\$ 69,882	5,626,602	\$ 0.01
Effect of Dilutive Securities Stock Options		455,251	
Diluted EPS Income available to common stockholders + dilutive securities	\$ 69,882	6,081,853	\$ 0.01

Recently Issued Accounting Standards

In August 2001, the FASB issued Statement of Financial Accounting Standards No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets (SFAS No. 144). SFAS No. 144 establishes a single accounting model for long-lived assets to be disposed of by sale and requires that those long-lived assets be measured at the lower of carrying amount or fair value less cost to sell, whether reported in continuing operations or in discontinued operations. SFAS No. 144 is effective for fiscal years beginning after December 15, 2001. The Company adopted SFAS No. 144 on April 1, 2002, and the adoption did not have a material impact on the Company's financial position or results of operations.

In December 2002, the FASB issued SFAS No. 148, Accounting for Stock-Based Compensation - Transition and Disclosure (SFAS No. 148), which (i) amends SFAS No. 123, Accounting for Stock-Based Compensation, to provide alternative methods of transition for an entity that voluntarily changes to the fair value based method of accounting for stock-based compensation (ii) amends the disclosure provisions of SFAS No. 123 to require prominent disclosure about the effects on reported net income of an entity's accounting policy decisions with respect to stock-based employee compensation and (iii) amends APB Opinion No. 28, Interim Financial Reporting, to require disclosure about those effects in interim financial information. Items (ii) and (iii) of the new requirements in SFAS No. 148 are effective for financial statements for fiscal years ending after December 15, 2002. We have included the requirements of item (ii) in Note 2 in the Notes to Financial Statements and have included the requirements of item (iii) beginning in our first quarter of 2004.

In November 2002, the FASB issued FASB Interpretation No. 45, "Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others" (FIN 45), which requires that, for guarantees within the scope of FIN 45 issued or amended after December 31, 2002, a liability for the fair value of the obligation undertaken in issuing the guarantee be recognized. FIN 45 does not apply to certain guarantee contracts, such as for a lessee's residual value guarantee embedded in a capital lease. FIN 45 also requires additional disclosures in financial statements for periods ending after December 15, 2002,

which we have adopted. However, as of December 31, 2003, we believe that, other than product warranty, we have no material items subject to the new disclosure requirements.

(3) COMMITMENTS AND CONTINGENCIES

The Company currently leases its facilities under noncancelable lease agreements through October 31, 2004. The minimum future lease payments are \$27,893 for fiscal year ended March 31, 2004 and \$66,955 for fiscal year ended March 31, 2005.

The Company is subject to regulation by the United States Food and Drug Administration (FDA). The FDA provides regulations governing the manufacture and sale of the Company's products and regularly inspects the Company and other manufacturers to determine their compliance with these regulations. As of December 31, 2003 the Company believes it was in substantial compliance with all known regulations. The Company was last inspected in November 1998 and has not been notified of any deficiencies from that inspection. FDA inspections are conducted periodically at the discretion of the FDA.

The results of operations for the quarter ended December 31, 2003 should not be taken as an indication of the results of operations for all or any part of the balance of the year.

The accounts receivable balance at December 31, 2003 of \$953,460 included \$42,730 (4%) from international customers.

(4) MANAGEMENT'S REPRESENTATIONS

The condensed interim financial statements included herein have been prepared by the Company, without audit, pursuant to the rules and regulations of the Securities and Exchange Commission. Certain information and footnote disclosures normally included in financial statements prepared in accordance with generally accepted accounting principles have been condensed or omitted pursuant to such rules and regulations, although the Company believes that the disclosures made are adequate to make the information presented not misleading. The condensed interim financial statements and notes thereto should be read in conjunction with the financial statements and the notes thereto, included in the Company's Annual Report to the Securities and Exchange Commission for the fiscal year ended March 31, 2003, filed on Form 10-KSB on June 12, 2003.

The accompanying condensed interim financial statements have been prepared, in all material respects, in conformity with the standards of accounting measurements set forth in Accounting Principles Board Opinion No. 28 and reflect, in the opinion of management, all adjustments necessary to summarize fairly the financial position and results of operations for such periods in accordance with accounting principles generally accepted in the United States of America. All adjustments are of a normal recurring nature. The results of operations for the most recent interim period are not necessarily indicative of the results to be expected for the full year.

ITEM 2 MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Certain statements contained in this section on Management's Discussion and Analysis are not historical facts, including statements about the Company's strategies and expectations about new and existing products, market demand, acceptance of new and existing products, technologies and opportunities, market and industry segment growth, and return on investments in products and markets. These statements are forward looking statements within the meaning of the Private Securities Litigation Reform Act of 1995 and involve substantial risks and uncertainties that may cause actual results to differ materially from those indicated by the forward looking statements. All forward looking statements in this section on Outlook are based on information available to the Company on the date of this document, and the Company assumes no obligation to update such forward looking statements. Readers of this Form 10-QSB are strongly encouraged to review the section entitled *Factors Which May Affect Future Performance and Financial Condition*.

General

Encision Inc. (Encision or the Company), a medical device company based in Boulder, Colorado, has developed and launched innovative technology that is emerging as a standard of care in minimally-invasive surgery. The Company believes its patented AEM® Surgical Instruments are changing the marketplace for electrosurgical devices and laparoscopic instruments by providing a solution to a well documented patient safety risk in laparoscopic surgery.

Encision was founded to address market opportunities created by the increase in minimally-invasive surgery (MIS) and the surgeons' preference for using electrosurgery devices in these procedures. The product opportunity was created by surgeons' continued widespread demand for using monopolar electrosurgery instruments which, when used in laparoscopic surgery, are susceptible to causing inadvertent collateral tissue damage outside the surgeon's field of view. The risk of unintended electrosurgical burn injury to the patient in laparoscopic surgery has been well documented. This risk poses a threat to patient safety and creates liability exposure for surgeons and hospitals that do not adequately address the issue.

Encision's patented AEM technology provides surgeons with the desired tissue effects, while preventing stray electrosurgical energy that can cause unintended and unseen tissue injury. AEM Laparoscopic Instruments are equivalent to conventional instruments in size, shape, ergonomics and functionality but they incorporate active electrode monitoring technology to dynamically and continuously monitor the flow of electrosurgical current, thereby helping to prevent patient injury. With Encision's shielded and monitored instruments, surgeons are able to perform electrosurgical procedures more safely and efficaciously than is possible using conventional instruments. In addition, the AEM instruments are cost competitive with conventional non-shielded, non-monitored instruments. The result is advanced patient safety at comparable cost and with no change in surgeon technique.

AEM technology has been recommended and endorsed by sources from all groups involved in minimally-invasive surgery. Surgeons, nurses, biomedical engineers, the medicolegal community, malpractice insurance carriers and electrosurgical device manufacturers advocate the use of AEM technology. The breadth of endorsements continues to expand with the recognition of active electrode monitoring technology as an *AORN Recommended Practice* by the Association of periOperative Registered Nurses and with insurance and medicolegal endorsements.

Edgar Filing: ENCISION INC - Form 10QSB

The Company has focused its marketing strategies on expanding the market awareness of the AEM technology and its broad independent endorsements, and has continued efforts to expand the AEM product line. With the broad array of AEM instruments now available from the Company, the surgeon has a wide choice of instrument options and does not have to change surgical technique. This coincides with the continued expansion of independent endorsements for AEM technology. Recommendations from the malpractice insurance and medicolegal communities complement the broad clinical endorsements AEM technology has garnered over the past few years.

Adding further credibility to the benefits of Encision's AEM technology are the Company's recent supplier agreements with Novation and Premier, two of the largest Group Purchasing Organizations (GPO) in the United States. Together, Novation and Premier represent over 3,000 hospitals and over 50% of all surgery in the U.S. Management believes that these GPO supplier agreements give further indication that AEM technology is gaining broader acceptance in the market. Management believes that having the nation's leading medical purchasing groups recognize the value of the Company's technology reflects the potential impact that AEM instruments products can have in the market and in advancing patient safety in surgery nationwide. These agreements do not involve purchase commitments but the Company expects these relationships to expand the market visibility of AEM technology and smooth the procurement and conversion process for new hospital customers.

When a hospital converts to AEM technology it provides recurring revenue to the Company from sales of replacement instruments. There is a strong retention rate of customers who have converted to AEM technology. Management believes this indicates strong customer satisfaction and is further supported by the fact that there is no directly competing technology to supplant AEM products once the hospital has converted. The replacement market of reusable and disposable AEM products in converted hospitals represents

over 65% of Encision's revenue over the past twelve months and this revenue stream is expected to grow as the base of newly converted hospitals continues to grow.

Until fiscal 2003, the Company incurred annual losses since its inception, and has an accumulated deficit of \$15,191,454 at December 31, 2003. Operations have been financed primarily through issuance of equity. The Company's liquidity has stabilized after a history of operating losses. On July 30, 2003 the Company issued 333,334 shares of its common stock to the Wasatch Micro Cap Fund and the Wasatch Micro Cap Value Fund, for gross proceeds of \$1,000,002. Funds managed by Wasatch Advisors, Inc. held shares of the Company's common stock, constituting less than 5% of the issued and outstanding shares of its common stock, prior to that transaction.

During the nine months ended December 31, 2003, the Company used \$159,940 in cash for operations and used \$218,695 for investments in patents and equipment (primarily capital equipment owned by the Company at customer locations). As of December 31, 2003, the Company had \$1,212,333 in cash and cash equivalents available to fund future operations, an increase of \$626,781 from March 31, 2003. The Company's working capital is \$2,610,750 at December 31, 2003.

Historical Perspective

The Company was organized in 1991 and spent several years developing the AEM monitoring system and protective sheaths to adapt to conventional electrosurgical instruments. During this period, the Company conducted product trials and applied for patents with the United States Patent Office and with the International patent agencies. Patents were issued in 1994, 1996, 1997, 1998 and 2002.

As the Company evolved, it was clear to the Company that its active electrode monitoring technology needed to be integrated into the standard laparoscopic instrument design. As the development program proceeded, it also became apparent that the merging of electrical and mechanical engineering skills in the instrument development process for the Company's patented, integrated electrosurgical instruments was a complex and difficult task. As a result, instruments with integrated AEM technology were not completed for several years. Prior to offering a full range of laparoscopic electrosurgical instrumentation, it was difficult for hospitals to commit to the AEM solution, as the Company did not have adequate comparable surgical instrument options to match what the surgeon demanded. As of fiscal 2001, a sufficiently broad product line was available to provide hospital operating rooms with AEM Instruments in most of the designs common for laparoscopic surgery.

The launch of an expanded line of AEM Laparoscopic Instruments was accomplished over the past two years. With the broad array of AEM instruments now available, the surgeon has a wide choice of instrument options and does not have to change surgical technique. Since conversion to AEM technology is transparent to the surgeon, hospitals can now universally convert to AEM technology, thus providing their laparoscopic surgery patients a higher level of safety. This coincides with the continued expansion of independent endorsements for AEM technology. Recommendations from the malpractice insurance and medicolegal communities complement the broad clinical endorsements AEM technology has garnered over the past few years.

Outlook

Installed Base of AEM Monitoring Equipment: The Company believes that the installed base of AEM monitors has the potential for increasing as the inherent risks associated with monopolar laparoscopic electrosurgery become more widely acknowledged and as the network of independent sales representatives becomes more adept at selling the AEM products to our customers. The Company expects that the replacement sales of electrosurgical instruments and accessories will increase as additional hospitals are converted to AEM technology. The Company believes that the efforts to improve the quality of sales representatives carrying the AEM product line, along with increased marketing efforts and the introduction of new products, may provide the basis for increased revenue and continuing profitable operations. However these measures, or any others that the Company may adopt, may not result in either increased revenue or continuing profitable operations.

Possibility of Continued Operating Losses: Until fiscal 2003, the Company had incurred losses from operations since inception and has an accumulated deficit of \$15,191,454 as of December 31, 2003. The Company has made significant strides toward improving its operating results. Approximately \$627,000 of cash has been provided by the Company's activities in fiscal 2004. However, due to the ongoing need to develop, optimize and train the independent sales rep network and the need to increase sustained revenues to a level adequate to cover fixed and variable operating costs, the Company may operate at a net loss from time to time. On July 30, 2003 the Company issued a total of 333,334 shares of its common stock to the Wasatch Micro Cap Fund and the Wasatch Micro Cap Value Fund, for gross proceeds of \$1,000,002. Funds managed by Wasatch Advisors, Inc. held shares of the Company's common stock, constituting less than 5% of the issued and outstanding shares of its common stock, prior to that transaction.

Revenue Growth: The Company expects to generate increased revenue in the U.S. from sales to new hospital customers as the network of independent sales representatives becomes more proficient and expands the number of hospital conversions to AEM Surgical Instruments. The Company believes that the visibility and credibility of the independent clinical endorsements for AEM technology will contribute to new hospital conversions and increased revenues in fiscal 2004. The Company also expects that supplier agreements with Novation and Premier, which together represent over 3,000 U.S. hospitals, will expose more hospitals to the benefits of AEM technology and may stimulate new hospital conversions and increased revenues. The Company also expects to

increase market share gains through promotional programs of placing Company-owned AEM monitors at no charge into hospitals that commit to standardize on AEM instruments. However the Company's efforts to increase market share and grow revenues will depend in part on the Company's ability to expand the efficiency and effective coverage range of its independent sales representative network.

Gross Profit and Gross Margins: Gross profit and gross margin can be expected to fluctuate from quarter to quarter, as a result of product sales mix and sales volume. Gross margins on products manufactured or assembled by the Company are expected to improve at higher levels of production and sales.

Sales and Marketing Expenses: We continue our efforts to expand domestic and international distribution capability and we believe that sales and marketing expenses will decrease as a percentage of net revenue with increasing sales volume.

Research and Development Expenses: Research and development expenses are expected to increase modestly to support development of additions to our AEM product line, further expanding the instrument options for the surgeon. New additions to the AEM product line are planned for introduction in fiscal year 2004.

Results of Operations

For the three months ended December 31, 2003 compared to the three months ended December 31, 2002.

Net revenue. Revenue for the quarter ended December 31, 2003, was \$1,790,849, compared to \$1,812,053 for the quarter ended December 31, 2002, a decrease of 1%. The decrease is attributable to a decrease in the number of new hospital conversion orders vs. one year ago. The Company converted five new hospitals to AEM technology in the three months ended December 31, 2003. The pipeline of new hospital prospects remains strong; however, progress through the sales continuum has slowed and we have seen a lower rate of new hospital conversions during the past nine months. We believe this is due to a combination of factors, including general economic conditions. However, we experienced a consistent level of replacement business from the installed base of users. When a hospital converts to AEM technology the Company earns revenue from replacement instrument purchases, which only the Company can provide. The Company is working to expand the effective coverage range of its independent sales rep network. These efforts are intended to help the Company increase new hospital conversions to AEM Instruments. The Company has trained 43 new reps in the past 4 months. While it will take a number of months before they generate new hospital conversions, the combination of the new rep additions and an expanded sales management team is intended to provide the field focus necessary to achieve market gains.

Gross Profit. The gross profit for the quarter ended December 31, 2003 of \$1,058,996 increased by 0% from the quarter ended December 31, 2002 gross profit of \$1,057,936. Gross profit as a percentage of revenue (gross margin) increased

from 58% for the quarter ended December 31, 2002 to 59% in the quarter ended December 31, 2003. The increase in gross margin was primarily the result of minor sales price increases compared with one year ago. For the three months ended December 31, 2003, the Company provided \$23,889 in AEM monitors to customers at no-charge to newly converted hospitals as part of a sales incentive program.

Sales and marketing expenses. Sales and marketing expenses of \$639,563 for the quarter ended December 31, 2003 increased by 7% compared to \$599,080 for the quarter ended December 31, 2002. The increase was a result of increased sales commissions on higher revenue. Sales expenses are under budget, though slightly increased versus one year ago. We have taken recent actions intended to lead to improved results commensurate with the special potential of our AEM technology. These actions include adding personnel to our sales management team to more effectively manage the network of independent sales representatives and expand the effective coverage range. A larger sales management team is focused on training, directing, motivating and managing the independent rep network to expand our effective coverage range and increase the rate of new account conversions.

General and administrative expenses. General and administrative expenses of \$227,555 for the quarter ended December 31, 2003 increased by 20% compared to \$189,254 for the quarter ended December 31, 2002. The increase is the result of increases in compensation, property & casualty insurance, legal fees and fees for outside Directors compared with one year ago.

Research and development expenses. Research and development expenses of \$190,050 for the quarter ended December 31, 2003 increased by 56% compared to \$121,775 for the quarter ended December 31, 2002. The increase is a result of added headcount and expenses associated with initiatives to address design, manufacturing and cost improvements with several product lines.

For the nine months ended December 31, 2003 compared to the nine months ended December 31, 2002.

Net revenue. Revenue for the nine months ended December 31, 2003, were \$5,372,808, compared to \$4,908,318 for the nine months ended December 31, 2002, an increase of 9%. The increase is attributable to the Company's successful conversion of new hospitals utilizing AEM technology while maintaining strong ongoing business and customer retention from hospitals that had previously converted to Encision's technology. The pipeline of new hospital prospects remains strong, however, progress through the sales continuum has slowed and we have seen a lower rate of new hospital conversions during the past nine months. We believe this is due to a combination of factors, including general economic conditions. However, we experienced a consistent level of replacement business from the installed base of users. When a hospital converts to AEM technology the Company earns revenue from replacement instrument purchases, which only the Company can provide. The Company is working to expand the effective coverage

range of its independent sales rep network. These efforts are intended to help the Company increase new hospital conversions to AEM Instruments. The Company has trained 43 new reps in the past 4 months. While it will take a number of months before they generate new hospital conversions, the combination of the new rep additions and an expanded sales management team is intended to provide the field focus necessary to achieve market gains.

Gross profit. Gross profit for the nine months ended December 31, 2003 of \$3,136,237 increased by 6% from the nine months ended December 31, 2002 gross profit of \$2,955,345. Gross profit as a percentage of revenue (gross margin) decreased from 60% for the nine months ended December 31, 2002 to 58% in the nine months ended December 31, 2003. The decrease in gross margin was primarily the result of increased depreciation expense for no-charge AEM monitors placed in customer facilities, added headcount in Operations department, a shift in revenue mix (increased sales for a lower margin product family) and unfavorable foreign exchange rates compared with one year ago. For the nine months ended December 31, 2003, the Company provided \$113,076 in AEM monitors to customers at no-charge to newly converted hospitals as part of a sales incentive program.

Sales and marketing expenses. Sales and marketing expenses of \$1,806,759 for the nine months ended December 31, 2003 increased by 1% compared to \$1,782,195 for the nine months ended December 31, 2002. The sales commission programs are based on revenue goals which include incentives for the sales team to grow revenue via new hospital conversions to the Company's AEM products. Sales expenses are under budget, though slightly increased versus one year ago. Marketing expenses are decreased from one year ago due to the timing impact of various marketing programs and initiatives. We have taken recent actions intended to lead to improved results commensurate with the special potential of our AEM technology. These actions include adding personnel to our sales management team to more effectively manage the network of independent sales representatives and expand the effective coverage range. A larger sales management team is focused on training, directing, motivating and managing the independent rep network to expand our effective coverage range and increase the rate of new account conversions.

General and administrative expenses. General and administrative expenses of \$685,177 for the nine months ended December 31, 2003 increased by 3% compared to \$662,845 for the nine months ended December 31, 2002. The increase is the result of increased compensation, property & casualty insurance, legal fees and fees for outside Directors compared with a year ago.

Research and development expenses. Research and development expenses of \$570,474 for the nine months ended December 31, 2003 increased by 58% compared to \$361,642 for the nine months ended December 31, 2002. The increase is a result of added headcount and expenses associated with initiatives to address design, manufacturing and cost improvements with several product lines.

Liquidity and Capital Resources

Edgar Filing: ENCISION INC - Form 10QSB

To date, operating funds have been provided primarily by sales of common stock and warrants to purchase the Company's common stock, which totaled \$18,273,100 through December 31, 2003, and, to a lesser degree, funds provided by sales of the Company's products. On July 30, 2003 the Company issued a total of 333,334 shares of its common stock to the Wasatch Micro Cap Fund and the Wasatch Micro Cap Value Fund, for gross proceeds of \$1,000,002. Funds managed by Wasatch Advisors, Inc. held shares of the Company's common stock, constituting less than 5% of the issued and outstanding shares of its common stock, prior to that transaction.

The Company's operations used \$159,940 of cash in the nine months ended December 31, 2003 on sales of \$5,372,808 and generated \$450,900 of cash in the nine months ended December 31, 2002 on sales of \$4,908,318. Prior to fiscal 2003, the use of cash in our operations resulted primarily from the funding of the Company's annual net losses. These amounts of cash generated from and used in operations are not indicative of the expected cash to be generated from or used in operations in FY 04. As of December 31, 2003, the Company had \$1,212,333 in cash and cash equivalents available to fund future operations. Working capital was \$2,610,750 at December 31, 2003 compared to \$1,596,831 at March 31, 2003. Current liabilities were \$885,044 at December 31, 2003, compared to \$926,781 at March 31, 2003.

Capital expenditures in the nine months ended December 31, 2003 (\$218,695) result primarily from the capitalization of AEM monitors placed in hospitals under various promotional programs. Placing Company-owned AEM monitors into hospitals at no charge to facilitate their use of AEM instruments is an initiative to accelerate new hospital conversions to AEM instruments. Under these promotional programs the Company maintains ownership of the AEM monitor and the cost is capitalized and depreciated as cost of sales over the projected five year life of the asset.

The Company's fiscal year 2004 (FY 04) operating plan is focused on increasing hospital conversions to AEM products, growing revenue, increasing gross profits and conserving cash. The Company can not predict with certainty the expected revenue, gross profit, net income or loss and usage of cash and cash equivalents for FY 04. However, management believes that its cash resources will be sufficient to fund its operations for at least the next twelve months under its current operating plan. If management is unable to manage the Company's business operations in line with budget expectations, it could have a material adverse effect on the Company's business viability, financial position, results of operations and cash flows. Further, if the Company is not successful in sustaining profitability and remaining at least cash flow break-even, additional capital may be required to maintain ongoing operations.

The Company believes the unique performance of the AEM technology and its breadth of independent endorsements provides an opportunity for continued market share growth. The Company believes that the market awareness of the AEM technology and its endorsements is continually improving and that this will benefit the sales efforts in FY 04. The Company believes that the Company entered FY 04 having achieved improvements in the clinical credibility of its technology. The Company's objective in FY 04 is to maintain expense controls while optimizing sales execution in the field, expand market awareness of the AEM technology and maximize the number of additional hospital conversions to AEM instruments.

Income Taxes

As of March 31, 2003, net operating loss carryforwards totaling approximately \$15,300,000 are available to reduce taxable income in the future. The net operating loss carryforwards expire, if not previously utilized, at various dates beginning in the year 2006. The Company has not paid income taxes since its inception. The Tax Reform Act of 1986 and other income tax regulations contain provisions which may limit the net operating loss carryforwards available to be used in any given year, if certain events occur, including changes in ownership interests. The Company has established a valuation allowance for the entire amount of its deferred tax asset since inception due to its history of losses. Should the Company achieve sufficient, sustained income in the future, the Company may conclude that some or all of the valuation allowance should be reversed.

Contractual Obligations

Aside from the operating lease commitments, the Company does not have any material contractual commitments requiring settlement in the future.

At December 31, 2003, the Company's commitments under these obligations were as follows:

Operating Leases

Critical Accounting Policies and Estimates

Our discussion and analysis of our financial condition and results of operations are based upon our financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenue and expenses, and related disclosure of contingent assets and liabilities. On an on-going basis, we evaluate our estimates, including those related to bad debts, inventories, sales returns, warranty, contingencies and litigation. We base our estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions. We believe the following critical accounting policies affect our more significant judgments and estimates used in the preparation of our financial statements.

The Company maintains allowances for doubtful accounts for estimated losses resulting from the inability of its customers to make required payments. If the financial condition of our customers were to deteriorate, resulting in an impairment of their ability to make payments, additional allowances may be required, which would increase our expenses during the periods in which any such allowances were made. The amount recorded as a provision for bad debt in each period is based upon our assessment of the likelihood that we will be paid on our outstanding receivables, based on customer-specific as well as general considerations. To the extent that our estimates prove to be too high, and we ultimately collect a receivable previously determined to be impaired, we may record a reversal of the provision in the period of such determination.

We provide for the estimated cost of product warranties at the time revenue is recognized. While we engage in extensive product quality programs and processes, including actively monitoring and evaluating the quality of its component suppliers, we have experienced some costs related to warranty. The warranty accrual is based upon historical experience and is adjusted based on current experience. Should actual warranty experience differ from our estimates, revisions to the estimated warranty liability would be required.

We reduce inventory for estimated obsolete or unmarketable inventory equal to the difference between the cost of inventory and the estimated market value based upon assumptions about future demand and market conditions. If actual market conditions are less favorable than those projected by management, additional inventory write-downs may be required. Any write-downs of inventory would reduce our reported net income during the period in which such write-downs were applied. To the extent that our estimates prove to be too high, and

we ultimately utilize or sell inventory previously determined to be impaired, we may record a reversal of the provision in the period of such determination.

We recognize deferred income tax assets and liabilities for the expected future income tax consequences, based on enacted tax laws, of temporary differences between the financial reporting and tax bases of assets and liabilities. Deferred tax assets are then reduced, if deemed necessary, by a valuation allowance for the amount of any tax benefits which, more likely than not based on current circumstances, are not expected to be realized. Should we achieve sufficient, sustained income in the future, we may conclude that all or some of the valuation allowance should be reversed

We depreciate our property and equipment primarily on a double-declining basis over the estimated useful life of the asset, generally three to five years. The Company-owned, consignment AEM Monitors are depreciated on a double-declining basis for a period of 5 years. Leasehold improvements are depreciated over the shorter of the remaining lease term or the estimated useful life of the asset. Maintenance and repairs are expensed as incurred and major additions, replacements and improvements are capitalized.

We amortize our patent costs over their estimated useful lives, which is typically the remaining statutory life. From time to time, we may be required to adjust these lives based on advances in technology, competitor actions, and the like. We review the recorded amounts of patents at each period end to determine if their carrying amount is still recoverable based on our expectations regarding sales of related products. Such an assessment, in the future, may result in a conclusion that the assets are impaired, with a corresponding charge against earnings.

Factors Which May Affect Future Performance and Financial Condition:

You should carefully consider the risk factors described below. If any of the following risk factors actually occur, the Company's business, prospects, financial condition or results of operations would likely suffer. In such case, the trading price of the Company's common stock could fall resulting in the loss of all or part of your investment. You should look at all these risk factors in total. Some risk factors may stand on their own. Some risk factors may affect (or be affected by) other risk factors. You should not assume the Company has identified these connections. You should not assume that the Company will always update these and future risk factors in a timely manner. The Company is not undertaking any obligation to update these risk factors to reflect events or circumstances after the date of this report or to reflect the occurrence of unanticipated events.

Among the factors that could cause future results and financial condition to be materially different from expectations are:

1. *Our products may not be accepted by the market.* The success of our products and our financial condition depends on the acceptance of AEM products by the medical community in commercially viable quantities during fiscal year 2004 and beyond. We cannot predict how quickly or how broadly AEM products will be accepted by the medical community. We need to continually educate the marketplace about the potential hazards involved in the use of conventional electrosurgical products during minimally-invasive surgical procedures and the expected benefits associated with the use of AEM products. If we are unsuccessful in educating the marketplace about our technology and the hazards of conventional instruments, we will not create sufficient demand by hospitals and surgeons for AEM

products and our financial condition, results of operations and cash flows could be adversely affected.

2. *We need to continually develop and train our network of independent sales representatives and expand our distribution efforts in order to be successful.* Our attempts to develop and train a network of independent sales representatives in the U.S. and to expand our international distribution efforts may take longer than expected and may result in considerable amounts of retraining effort as the independent sales organizations change their product lines and personnel. We may not be able to obtain full coverage of the U.S. by independent sales representatives as quickly as anticipated. The independent sales representative network has inherent flaws and inefficiencies, which can include conflicts of interest and competing products. Optimizing the quality of the network and the performance of independent sales representatives in the U.S. is an ongoing challenge. We may also encounter difficulties in developing our international presence due to regulatory issues and our ability to successfully develop international distribution options. Our inability to expand our network of independent sales representatives and optimize their performance could adversely affect our financial results.

3. *We may need additional funding to support our operations.* We were formed in 1991 and have incurred losses of over \$15 million since that date. We have primarily financed research, development, and operational activities with sales of our common stock. At December 31, 2003, we had \$1,212,333 in cash available to fund future operations. We believe that we can maintain profitable operations in FY 2004 but there is no guarantee of our ability to do so. We may also find ourselves at a competitive disadvantage due to our constrained liquidity.

4. *We may not be able to compete successfully against current manufacturers of conventional (unshielded, unmonitored) electrosurgical instruments or against competitors who manufacture products that are based on surgical technologies that are alternatives to monopolar electrosurgery.* The electrosurgical products market is intensely competitive. We expect that manufacturers of unshielded, unmonitored electrosurgical instruments will resist any loss of market share that might result from the presence of our shielded and monitored instruments in the marketplace. We also believe that manufacturers of products that are based upon surgical technologies that are alternatives to monopolar electrosurgery are our competitors. These technologies include bipolar

electrosurgery, the harmonic scalpel and lasers. The alternative technologies may gain market share and new competitive technologies may be developed and introduced. Most of our competitors and potential competitors have significantly greater financial, technical, product development, marketing and other resources. Most of our competitors also currently have substantial installed customer bases in the medical products market and have significantly greater market recognition. As a result of these factors, our competitors may be able to respond more quickly to new or emerging technologies and changes in customer requirements or to devote greater resources to the development, promotion and sale of their products. It is possible that new competitors or new alliances among competitors may emerge and rapidly acquire significant market share. The competitive pressures we face may materially adversely affect our financial position, results of operations and cash flows, and this may hinder our ability to respond to competitive threats.

5. *If we do not continually enhance our products and keep pace with rapid technological changes, we may not be able to attract and retain customers.* Our future success and financial performance will depend in part on our ability to meet the increasingly sophisticated needs of customers through the timely development and successful introduction of product upgrades, enhancements and new products. These upgrades, enhancements and new products are subject to significant technical risks. The medical device market is subject to rapid technological change, resulting in frequent new product introductions and enhancements of existing products, as well as the risk of product obsolescence. While we are currently developing new products and enhancing our existing product lines, we may not be successful in completing the development of the new products or enhancements. In addition, we must respond effectively to technological changes by continuing to enhance our existing products to incorporate emerging or evolving standards. We may not be successful in developing and marketing product enhancements or new products that respond to technological changes or evolving industry standards. We may experience difficulties that could delay or prevent the successful development, introduction and marketing of those products, and our new products and product enhancements may not adequately meet the requirements of the marketplace and achieve commercially viable levels of market acceptance. If any potential new products, upgrades, or enhancements are delayed, or if any potential new products, upgrades, or enhancements experience quality problems or do not achieve such market acceptance, or if new products make our existing products obsolete, our financial position, results of operations and cash flows would be materially adversely affected.

6. *If government regulations change or if we fail to comply with existing and/or new regulations, we might miss market opportunities and experience increased costs and limited growth.* The research, manufacturing, marketing and distribution of our products in the United States and other countries are subject to extensive regulation by numerous governmental authorities including, but not limited to, the Food and Drug Administration. Under the Federal Food, Drug and Cosmetic Act, medical devices must receive clearance from the Food and Drug Administration through the Section 510(k) pre-market notification process or through the more lengthy pre-market approval process before they can be sold in the United States. The process of obtaining required regulatory approvals is lengthy and has required the expenditure of substantial resources. There can be no assurance that we will be able to continue to obtain the necessary approvals. As part of our strategy, we also intend to pursue commercialization of our products in international markets. Our products are subject to regulations that vary from country to country. The process of obtaining foreign regulatory approvals in certain countries can be lengthy and require the expenditure of substantial resources. We may not be able to obtain necessary regulatory approvals or clearances on a timely basis or at all, and delays in receipt of or failure to receive such approvals or clearances, or failure to comply with existing or future regulatory requirements would have a material adverse effect on our financial position, results of operations and cash flows.

7. *If we fail to comply with the extensive regulatory requirements governing the manufacturing of our products, we could be subject to fines, suspensions or withdrawals of regulatory approvals, product recalls, suspension of manufacturing, operating restrictions and/or criminal prosecution.* The manufacturing of our products is subject to extensive regulatory requirements administered by the Food and Drug Administration and other regulatory bodies. Inspection of our manufacturing facilities and processes can be conducted at any time, without prior notice, by the agencies. In addition, future changes in regulations or interpretations made by the Food and Drug Administration or other regulatory bodies, with possible retroactive effect, could adversely affect us. Changes in existing regulations or adoption of new regulations or policies could prevent us from obtaining, or affect the timing of, future regulatory approvals or clearances. We may not be able to obtain necessary regulatory approvals or clearances on a timely basis in the future, or at all. Delays in receipt of, failure to receive such approvals or clearances and/or failure to comply with existing or future regulatory requirements would have a material adverse effect on our financial position, results of operations and cash flows.

8. *One of our directors controls an aggregate of approximately 33% of our common stock and our executive management group owns a substantial percentage of our common stock.* As of December 31, 2003, Vern D. Kornelsen, a director of the Company, and an entity controlled by Mr. Kornelsen own an aggregate of 1,888,443 shares of our common stock. As a result, Mr. Kornelsen may be able to exert substantial influence over matters requiring action by our shareholders. Our executive officers and directors as a group beneficially own 3,092,484 shares of our common stock and as a group may be able to substantially influence the election of our Board of Directors. Such voting concentration could exert substantial influence over other matters requiring action by our shareholders.

9. *Our current patents, trade secrets and know-how may not provide a competitive advantage, the pending applications may not result in patents being issued, and our competitors may design around any patents issued to us.* Our success will continue to depend in part on our ability to maintain patent protection for our products and processes, to preserve our trade secrets and to operate without

infringing the proprietary rights of third parties. We have four issued U.S. patents on several technologies embodied in our AEM Monitoring System, AEM Instruments and related accessories and we have applied for additional U.S. patents. In addition, we have four issued foreign patents. The validity and breadth of claims coverage in medical technology patents involve complex legal and factual questions and may be highly uncertain. Also, patents may not protect our proprietary information and know-how or provide adequate remedies for us in the event of unauthorized use or disclosure of such information, and others may be able to develop, independently, such information. There has been substantial litigation regarding patent and other intellectual property rights in the medical device industry. Litigation may be necessary to enforce patents issued to us, to protect trade secrets or know-how owned by us, to defend us against claimed infringement of the rights of others or to determine the ownership, scope or validity of our proprietary rights or those of others. Any such claims may require us to incur substantial litigation expenses and to divert substantial time and effort of management personnel and could substantially decrease the amount of capital available for our operations. An adverse determination in litigation involving the proprietary rights of others could subject us to significant liabilities to third parties, could require us to seek licenses from third parties, and could prevent us from manufacturing, selling or using our products. The occurrence of any such actual or threatened litigation or the effect on our business of such litigation may materially adversely affect our financial position, results of operations and cash flows. Additionally, our assessment that a patent is no longer of value could result in a significant charge against our earnings.

10. *We depend on single source suppliers for certain of the key components and sub-contractors to provide much of our products used in the manufacturing of our products. The loss of a supplier or limitation in supply from existing suppliers could have a material adverse effect on our ability to manufacture our products until a new source of supply is located.* Although we believe that there are alternative suppliers, any interruption in the supply of key components could have a material adverse effect on us. A sudden increase in customer demand may create a backorder situation as lead times for some of our critical materials are in excess of 12 weeks. We rely on subcontractors to provide products, either in the form of finished goods or sub-assemblies that we then assemble and test. While these sub-contractors reduce our total cost of manufacturing, they may not be as responsive to increased demand as we would be if we had our manufacturing capacity entirely in-house, which may limit our growth strategy and revenues.

11. *The potential fluctuation in future quarterly results may cause our stock price to fluctuate.* We expect that our operating results could fluctuate significantly from quarter to quarter in the future and will depend upon a number of factors, many of which are outside our control. These factors include the extent to which our AEM system and related accessories gain market acceptance; our investments in marketing, sales, research and development and administrative personnel necessary to support our anticipated growth; our ability to expand our market share; actions of competitors and general economic conditions. The market value of our stock has dramatically fluctuated in the past and is likely to fluctuate in the future. Any deviation could have an immediate and significant negative impact on the market price of our stock.

12. *Our common stock is thinly traded, the prices at which it trades are volatile and the buying or selling actions of a few shareholders may adversely affect our stock price.* At March 31, 2003 we had a public float of 2,457,358 shares or 43% of the outstanding common stock. The average number of shares traded in any given day over the past year has been relatively small compared to the public float. Thus, the actions of a few shareholders either buying or selling shares of our common stock may significantly affect the price of the shares. Historically, the over-the-counter markets for securities such as our common stock have experienced extreme price and volume fluctuations that do not necessarily relate to operating performance.

13. *Our insurance coverage for product liability claims is up to \$5,000,000.* We face an inherent business risk of exposure to product liability claims in the event that the use of our products is alleged to have resulted in adverse effects while in use. We maintain a general liability insurance policy up to the amount of \$5,000,000 that includes coverage for product liability claims. Liability claims may be excluded from the policy, may exceed the coverage limits of the policy, or the insurance may not continue to be available on commercially reasonable terms or at all. Consequently, a product liability claim or other claim with respect to uninsured liabilities or in excess of insured liabilities could have a material adverse effect on our financial position, results of operations and cash flows.

14. *We depend on revenue from some major customers.* We depend on revenue that is generated from hospitals ongoing usage of the AEM surgical instruments. In FY 2003, we generated revenue from over 300 hospitals that have converted to AEM products, but no hospital customer contributed more than 3% to the total revenues. In the U.S., we utilize one stocking distributor, which sells AEM products to multiple hospital customers. During FY 2004, we have generated revenue of \$381,000 (7%) from this distributor. While it is infrequent that a hospital customer stops using AEM instruments after they convert, a loss of ongoing revenue from a hospital customer could have a material adverse effect on our revenues and cash flows.

15. *We depend on certain key personnel.* We are highly dependent on a limited number of key management personnel, particularly our President and Chief Executive Officer, James A. Bowman. Our loss of key personnel to death, disability or termination, or our inability to hire and retain qualified personnel, could have a material adverse effect on our financial position, results of operations and cash flows.

ITEM 3 CONTROLS AND PROCEDURES

(a) The Company has carried out an evaluation under the supervision and with the participation of the Company's management, including the Company's Chief Executive Officer and Principal Accounting Officer, of the effectiveness of the Company's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities and Exchange Act of 1934 (the "Exchange Act")). Based upon that evaluation, the Chief Executive Officer and the Principal Accounting Officer concluded as of December 31, 2003 that the Company's disclosure controls and procedures were effective in ensuring that information required to be disclosed by the Company under the Exchange Act was recorded, processed, summarized and reported within the time periods specified under the Exchange Act rules and forms.

(b) There were no significant changes in the Company's internal controls or in other factors that could significantly affect the Company's disclosure controls and procedures subsequent to the date of the evaluation discussed above, nor any significant deficiencies or material weaknesses in such disclosure controls, internal controls and procedures requiring corrective actions. As a result no corrective actions were taken.

PART II. OTHER INFORMATION

ITEM 1 LEGAL PROCEEDINGS

The Company is not currently engaged in any legal proceedings except as described below. The Company may become involved in litigation in the future in the normal course of business.

The Company has notified one of its distributors that it is in breach of its Distributor Agreement with the Company in several respects, and that if the distributor does not cure the breaches the Agreement may be terminated. The distributor has informed the Company that it believes the Company's interpretations of the Agreement are incorrect. If the parties are not able to resolve the dispute or negotiate a settlement to the dispute, the Distributor Agreement provides for binding arbitration in Boulder, Colorado. If the dispute is not resolved in a timely manner or is resolved in a manner adverse to the Company, it will likely affect sales activity in the distributor's territory. While the Company believes the existing on-going revenues from the installed base of customers may not be affected, potential new sales to new hospitals in that distributor's territory could be hindered. The distributor's purchases have represented approximately 7% of the Company's revenue in FY2004 and 10% of the Company's revenue in FY 2003. The business entity is principally owned by an individual who is a shareholder of the Company.

ITEM 2 Not Applicable

ITEM 3 RECENT SALES OF UNREGISTERED SECURITIES

On July 30, 2003 the Company issued a total of 333,334 shares of its common stock to the Wasatch Micro Cap Fund and the Wasatch Micro Cap Value Fund, for gross proceeds of \$1,000,002. Funds managed by Wasatch Advisors, Inc. held shares of the Company's common stock, constituting less than 5% of the issued and outstanding shares of its common stock, prior to that transaction. These securities were sold in transactions exempt from registration under Section 4(2) of the Securities Act of 1933 and Regulation D thereunder.
