14. Commentary on the financial results

During the 2006 financial year, the Group recorded total gross revenues of approximately \$10.8 million, representing a 3.5% increase in gross revenues over the prior year. The overall loss fell by more than \$2.9 million, due principally to significantly lower legal expenses having been incurred following the successful settlement of the patent dispute with Applera Corporation in December 2005. Importantly, the consolidated loss after tax comprised net non-cash items totalling approximately \$4.6 million, including amortisation of intangible assets (\$3.6 million), depreciation and amortisation of fixed assets (\$1.2 million), share-based payments expenses (\$0.4 million) and non-cash revenues generated from the Applera settlement (\$0.6 million). As a result, the consolidated net cash flows used in operations was \$6.0 million.

As a result of the adoption of Australian equivalents to International Financial Reporting Standards (AIFRS), the Company recorded, for the first-time, share-based payments expenses of approximately \$0.4 million and ceased its prior practice of amortising its goodwill. Full details regarding the impact of the Company's adoption of AIFRS are disclosed in Notes 41 and 42 to the attached financial statements.

Following the settlement of the patent dispute with Applera Corporation, the Company has sought to expand its licensing program by the appointment of four independent legal contractors, located in Washington D.C., the San Francisco Bay area, London and Vienna. It is expected that the appointment of these firms will, in time, greatly assist the Company to secure further licenses to its proprietary non-coding technology.

The revenues from the Company's genetic testing business during the 2006 financial year again saw a healthy increase of almost 7% over the equivalent prior year figure. This follows an increase of 16% for the preceding period. During the year, the range of tests being offered by the Company was expanded and, importantly, the National Association of Testing Authorities, Australia (NATA) granted further accreditation of the Company's Melbourne laboratory to provide a wide range of complex genetic tests.

Finally, during the 2006 financial year, the Company continued to fund five research and development projects, which have the potential to generate further valuable intellectual property for the Company. Several of these projects made significant technical advances during the year, with trials now being considered in several instances. The outputs from these projects can then be commercially exploited either by outright sale or via some form of testing and/or licensing activity. The Company continues to view this commitment to research as being fundamental to its long-term success.

15. The Financial Report which is attached to this Appendix 4E has been audited by the Company's auditor, Ernst & Young.

16. The Directors of the Company confirm that the Auditor's Report for the year ended 30 June 2006 did not contain any form of qualification.

17. Not applicable.
