

CleanTech Innovations, Inc.
Form 424B3
November 19, 2010

Filed Pursuant to Rule 424(b)(3)
Registration No. 333-168385

PROSPECTUS

CLEANTECH INNOVATIONS, INC.

4,166,632 Shares of Common Stock

The selling shareholders identified in this prospectus may offer and sell up to 4,166,632 shares of our common stock consisting of (i) 3,333,322 shares of our common stock issued to investors in the Units (as defined below), (ii) up to 833,310 shares of our common stock issuable upon exercise of warrants of which (a) warrants to purchase 499,978 shares of our common stock were issued to investors in the Units and (b) warrants to purchase 333,332 shares of our common stock were issued to placement agents and qualified finders in connection with the sale of the Units.

We are not selling any shares of our common stock in this offering and will not receive any proceeds from this offering. We may receive proceeds on the exercise of outstanding warrants for shares of common stock covered by this prospectus if the warrants are exercised for cash.

The selling shareholders may offer the shares covered by this prospectus at fixed prices, at prevailing market prices at the time of sale, at varying prices or negotiated prices, in negotiated transactions, or in trading markets for our common stock. We will bear all costs associated with this registration.

Our common stock trades on the OTC Bulletin Board under the symbol "EVCP." The closing price of our common stock on the OTC Bulletin Board on November 15, 2010, was \$8.99 per share.

You should consider carefully the risk factors beginning on page 5 of this prospectus.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The date of this prospectus is November 19, 2010.

You may only rely on the information contained in this prospectus or that we have referred you to. We have not authorized anyone to provide you with different information. This prospectus does not constitute an offer to sell or a solicitation of an offer to buy any securities other than the common stock offered by this prospectus. This prospectus does not constitute an offer to sell or a solicitation of an offer to buy any common stock in any circumstances in which such offer or solicitation is unlawful. Neither the delivery of this prospectus nor any sale made in connection with this prospectus shall, under any circumstances, create any implication that there has been no change in our affairs since the date of this prospectus or that the information contained by reference to this prospectus is correct as of any time after its date.

ABOUT THIS PROSPECTUS

This prospectus is part of a registration statement we filed with the Securities and Exchange Commission ("SEC"). You should rely only on the information provided in this prospectus and incorporated by reference in this prospectus. We have not authorized anyone to provide you with information different from that contained in or incorporated by reference into this prospectus. The selling shareholders are offering to sell, and seeking offers to buy, shares of common stock only in jurisdictions where offers and sales are permitted. The information in this prospectus is accurate only as of the date of this prospectus, regardless of the time of delivery of this prospectus or of any sale of common stock. The rules of the SEC may require us to update this prospectus in the future.

PROSPECTUS SUMMARY

This summary highlights selected information contained elsewhere in this prospectus and does not contain all of the information you should consider in making your investment decision. Before investing in the securities offered hereby, you should read the entire prospectus, including our financial statements and related notes included in this prospectus and the information set forth under the headings "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations." In this prospectus, the terms "CleanTech," the "Company," "we," "us," and "our" refer to CleanTech Innovations, Inc. and its subsidiaries.

Our Company

We are a manufacturer of structural towers for megawatt-class wind turbines as well as other highly engineered clean technology metal components in the People's Republic of China ("China" or "PRC"). We currently design, manufacture, test and sell structural towers for 1 and 1.5 megawatt ("MW") on-land and 3MW off-shore wind turbines and have the expertise and manufacturing capability to provide towers for larger MW on-land and off-shore turbines as they become more prevalent in China. We are currently the only certified wind tower manufacturer within Tieling, Liaoning Province, which provides significant competitive advantage in supplying towers into the wind-rich northern provinces of China. We also manufacture patented, specialty metal products that require advanced manufacturing and engineering capabilities, including bellows expansion joints and connecting bend pipes used for waste heat recycling in steel production and in ultra-high-voltage electricity transmission grids, as well as industrial pressure vessels. Our products provide clean technology solutions for China's increasing energy demand and environmental issues.

We sell our products exclusively in the domestic market. Our current wind tower customers include two of China's five largest state-owned utilities, which are among the top wind farm operators in China as measured by installed wind capacity. We produce wind towers, a component of wind turbine installations, but do not compete with wind turbine manufacturers. Our patented specialty metal products are used by large-scale industrial companies involved mainly in the steel and coke, petrochemical, high-voltage electricity transmission and thermoelectric industries, which are actively seeking ways to reduce their carbon and pollutant emissions.

We were founded in September 2007 and have since experienced significant growth. For the nine month period ending September 30, 2010, our net revenue was \$14.7 million, a 440% increase over the twelve month period ended December 31, 2009, and we generated a 29% gross margin and a 20% net margin. Sales of our wind tower products are increasing rapidly; we have shipped 137 wind towers, including towers for 3MW off-shore wind turbines, since their recent introduction in February 2010. Wind towers accounted for over 90% of our revenue for the nine month period ending September 30, 2010.

Notwithstanding the large increase in revenues, we may have payment delays and we do not recognize revenue until our products are delivered, tested and accepted by our customers. Our agreements with our customers generally provide for payments of 30% of the purchase price to be due on order placement, completion of manufacturing

milestones and upon customer acceptance, with the final 10% payment due up to 24 months from the customer acceptance date. Our payment delays may last up to six months from the due date, but we fully expect to receive all payments because the majority of our customers are state-owned and publicly traded utilities and industrial companies.

We believe our rapid growth will continue to benefit from the following competitive strengths:

- § Strong customer relationships with leading utility, wind and industrial companies
- § Geographical proximity to the multi-gigawatt pipeline of wind development projects in the northern provinces of China
- § Technically-advanced, precision manufacturing expertise demonstrated, in part, by our Class III A2 pressure vessel manufacturing license, a key criteria in customer selection of wind tower suppliers
- § Proprietary product designs and intellectual property
- § Excellent reputation for high-quality manufacturing, stringent testing, timely delivery and customer service

Our Company is headquartered in Tieling, Liaoning Province, China where we currently operate two production facilities with approximately 16,120 square meters of combined production space and an annual production capacity of up to 600 wind tower units. As of October 2010, we had 175 full time employees.

Our Industry

Wind power is the world's fastest-growing energy sector and China currently represents the world's largest market for wind products. According to the Global Wind Energy Council (“GWEC”) “Global Wind Energy Outlook 2010” (“GWEC 2010 Global Wind Outlook”), global installed wind capacity grew at a 27.8% CAGR from 2000 through 2009. In 2009, according to the GWEC “Global Wind 2009 Report” (“GWEC 2009 Global Wind Report”), global installed wind capacity grew at a record 31.8%, adding 38.3 gigawatts (“GW”) and bringing total installed wind capacity to 158.5GW. China accounted for 36% of all newly installed wind capacity and 16% of total worldwide wind capacity, first and second among all countries, respectively, according to the World Wind Energy Association (“WWEA”) “World Wind Energy Report 2009” (“WWEA 2009 Wind Report”). Installed wind capacity within China grew at a 61.5% CAGR from 2000 through 2009 – more than double the overall global rate – and capacity has more than doubled for the past four consecutive years, according to the WWEA 2009 Wind Report. In 2009, according to the GWEC “China Wind Power Outlook 2010” (“GWEC 2010 China Wind Outlook”), the domestic wind market grew 114.7%, adding 10,129 wind turbines or 13.8GW of new capacity and bringing total installed wind capacity to 25.8GW. According to the GWEC 2009 Global Wind Report, China will add 20GW of wind capacity annually through 2014 and the domestic wind market will reach 200-250GW in installed capacity by 2020.

We believe that it costs approximately \$1 billion to install 1GW of wind capacity in China, thereby resulting in capital investments of approximately \$200-\$250 billion by 2020. Wind energy resources are widely distributed in China, with rich resources concentrated in the three northern (northeast, north and northwest), southeast coastal and inland regions. According to Zenith International Research, “Wind Power Capacity Analysis, February 25, 2009” (“Zenith 2009 Wind Analysis”), approximately 80% of all wind resources in China exist within the nine northern provinces of China, five of which are located within 500 miles of our manufacturing facilities.

Company History

We operate through two wholly owned subsidiaries organized under the laws of the PRC – Liaoning Creative Bellows Co., Ltd. (“Creative Bellows”) and Liaoning Creative Wind Power Equipment Co., Ltd. (“Creative Wind Power”). Creative Bellows, which was incorporated on September 17, 2007, is our wholly foreign-owned enterprise (“WFOE”) and it owns 100% of Creative Wind Power, which was incorporated on May 26, 2009. Creative Bellows produces bellows expansion joints, pressure vessels and other fabricated metal specialty products. Creative Wind Power markets and sells wind towers designed and manufactured by Creative Bellows, which provides the production expertise, employees and facilities for wind tower production.

We were incorporated in the State of Nevada on May 9, 2006, under the name Everton Capital Corporation as an exploration stage company with no revenues and no operations and engaged in the search for mineral deposits or reserves. On June 18, 2010, we changed our name to CleanTech Innovations, Inc. and authorized an 8-for-1 forward split of our common stock effective July 2, 2010. Prior to the forward split, we had 5,501,000 shares of our common stock outstanding, and, after giving effect to the forward split, we had 44,008,000 shares of our common stock outstanding. We authorized the forward stock split to provide a sufficient number of shares to accommodate the trading of our common stock in the OTC marketplace after the acquisition of Creative Bellows as described below.

The acquisition of Creative Bellows’ ordinary shares was accomplished pursuant to the terms of a Share Exchange Agreement and Plan of Reorganization, dated July 2, 2010 (the “Share Exchange Agreement”), by and between Creative Bellows and the Company. Pursuant to the Share Exchange Agreement, we acquired from Creative Bellows all of its equity interests in exchange for the issuance of 15,122,000 shares of our common stock to the shareholders of Creative Bellows (the “Share Exchange”). Concurrent with the closing of the transactions contemplated by the Share Exchange Agreement and as a condition thereof, we entered into an agreement with Mr. Jonathan Woo, our former Chief Executive Officer and Director, pursuant to which he returned 40,000,000 shares of our common stock to us for cancellation. Mr. Woo received compensation of \$40,000 from us for the cancellation of his shares of our common stock. Upon completion of the foregoing Share Exchange transactions, we had 19,130,000 shares of common stock issued and outstanding. For accounting purposes, the Share Exchange transaction was treated as a reverse acquisition and recapitalization of Creative Bellows because, prior to the transaction, the Company was a non-operating public shell and, subsequent to the transaction, the Creative Bellows’ shareholders beneficially owned a majority of the outstanding common stock of the Company and will exercise significant influence over the operating and financial policies of the consolidated entity.

Our principal offices are located at C District, Maoshan Industry Park, Tieling Economic Development Zone, Tieling, Liaoning Province, China 112616. Our phone number is (86) 0410-6129922 and our website address is www.ctiproduct.com. The information contained on our website is not a part of this prospectus.

The Offering

Common stock outstanding before the offering	22,463,322 shares
Common stock offered by selling shareholders	Up to 4,166,632 shares

The maximum number of shares to be sold by the selling shareholders, 4,166,632 shares, represents 17.89% of our outstanding stock, assuming full exercise of the warrants

Common stock to be outstanding after the offering

23,296,632 shares, assuming full exercise of the warrants

Use of proceeds

We will not receive any proceeds from the sale of the common stock. To the extent that the selling shareholders exercise for cash all of the warrants covering the 833,310 shares of common stock issuable upon exercise of all of the warrants, we would receive \$2,499,930 from such exercises. We intend to use such proceeds for general corporate and working capital purposes. See “Use of Proceeds” for a complete description.

Risk Factors

The purchase of our common stock involves a high degree of risk. You should carefully review and consider the “Risk Factors” beginning on page 5.

The shares of our common stock offered by the selling shareholders identified in this prospectus were acquired by the selling shareholders through a private placement offering conducted by the Company. On July 12, 2010, we sold 3,333,322 Units to the selling shareholders at \$3.00 per Unit for \$10,000,000. Each “Unit” was offered and sold at a purchase price of \$3.00 per Unit and consisted of one share of our common stock and a warrant to purchase 15% of one share of our common stock. All warrants are immediately exercisable, expire on the third anniversary of their issuance, subject to call provisions, and entitle their holders to purchase one share of our common stock at \$3.00 per share. All of the shares and warrants were issued to the selling shareholders prior to the filing of this Registration Statement in two private placement offerings exempt from registration under the Securities Act of 1933, as amended (the “Securities Act”), under Regulation D and Regulation S promulgated thereunder. The private placement transactions both closed on July 12, 2010.

The above information regarding common stock to be outstanding after the offering is based on 22,463,322 shares of common stock outstanding as of November 15, 2010.

RISK FACTORS

Our business and an investment in our securities are subject to a variety of risks. The following risk factors describe the most significant events, facts or circumstances that could have a material adverse effect upon our business, financial condition, results of operations, ability to implement our business plan, and the market price for our securities. Many of these events are outside of our control. If any of these risks actually occurs, our business, financial condition or results of operation may be materially adversely affected. In such case, the trading price of our common stock could decline and investors in our common stock could lose all or part of their investment.

Risks Related to Our Business

Our limited operating history may not serve as an adequate basis to judge our future prospects and results of operations, and our limited revenues may affect our future profitability.

We and our subsidiaries began operations for the production of fabricated metal specialty components in September 2007 and introduced our bellows expansion joints products and pressure vessels in the first quarter of 2009 and our wind tower products in the first quarter of 2010. Our limited history of designing and manufacturing these fabricated metal specialty components may not provide a meaningful basis on which to evaluate our business. Moreover, we have limited revenues and we cannot assure you we will be able to expand our business and gross revenue with sufficient speed to maintain our profitability and not incur net losses in the future. While we expect our operating expenses to increase as we expand, any significant failure to realize anticipated revenue growth could result in significant operating losses. We will continue to encounter risks and difficulties frequently experienced by companies at a similar stage of development, including our potential failure to:

- § maintain our proprietary technology;
- § expand our product offerings and maintain the high quality of our products;
- § manage our expanding operations, including the integration of any future acquisitions;
- § obtain sufficient working capital to support our expansion and to fill customers’ orders in time;
- § maintain adequate control of our expenses;

§

implement our product development, marketing, sales, and acquisition strategies and adapt and modify them as needed;

§ anticipate and adapt to changing conditions in the wind power, steel, petrochemical and thermoelectric industries as well as the impact of any changes in government regulation, mergers and acquisitions involving our competitors, technological developments and other significant competitive and market dynamics.

Our inability to manage successfully any or all of these risks may materially and adversely affect our business.

Our plans for growth rely on an increasing emphasis on the wind power industry; this sector faces many challenges, which may limit our potential for growth in this new market.

Our principal plan for growth is to manufacture wind towers, our latest fabricated metal specialty component, for the China domestic wind power industry. As of September 30, 2010, approximately 92% of our revenues were from sales of our wind towers. We expect a majority of our future revenues and earnings to come from sales of wind towers for the growing wind power industry in China.

The wind power industry sector in China faces many challenges as it expands, however, including a reliance on continued PRC government environmental and energy conservation policies and incentive programs, which together are one of the industry's major growth drivers. Wind power accounts for a small percentage of the power generated in China currently, and the existing power grid and transmission system lags behind existing and planned wind power plant construction. Furthermore, the wind power industry is generally not competitive without government incentive programs and initiatives because of the relatively high generation costs for wind power compared to most other energy sources. The current government incentive programs and initiatives include a feed-in tariff paid to wind power producers by grid utility companies, the mandatory obligation of grid utility companies to purchase all the electricity generated by renewable energy projects within its grid coverage, preferential tax treatment and government spending and grants for renewable energy programs. Most of our customers are highly dependent on these government incentives, initiatives and other favorable policies to support their operations at a relatively acceptable cost level. There can be no assurance that PRC government support of the wind power industry will continue at its current level or at all, and any decrease or elimination of government incentives currently available to industry participants may result in increased operating costs incurred by our current customers or discourage our potential customers from purchasing our products.

Our ability to market to this industry segment is dependent upon both an increased acceptance of wind power as an energy source in China and the industry's acceptance of our products. We believe there will continue to be an increased demand for wind power in China and that the power companies installing wind-generated power equipment will purchase our products. We cannot assure you that we will be able to continue to develop this business successfully, however, and our failure to develop the business further will have a material adverse effect on our overall financial condition and the results of our operations. Additionally, any uncertainties or adverse changes in government incentives, initiatives or policies relating to the wind power industry will materially and adversely affect the investment plans of our customers and consequently our growth.

Contracts for wind power projects in China are awarded through competitive public bids and there is no assurance that we will be asked to bid on new projects or that we will win these bids.

Utilities in China award contracts for wind towers on a competitive basis. We are generally aware of upcoming projects by region as established in annual NDRC wind development plans and through our proprietary customer relationships. However, utilities disclose specific requests for proposals publicly via the Internet, which we monitor on a regular basis, when they are prepared to accept bids. As a precursor to bidding, suppliers like us must maintain their status as a qualified supplier to the utility as well as possess a license to manufacture Class III A2 pressure vessels, which is often a specific requirement to bid on wind tower contracts. A substantial deposit based upon contract amount, typically around \$125,000, is required for each bid and is returned to the bidder approximately three months following bid submission. This process helps to ensure that only companies with competent manufacturing and sufficient capitalization bid on projects. Competitive factors on wind tower bids include price, geographical proximity of the manufacturer to the wind power project and manufacturer reputation for quality and on-time delivery. It is our experience that typically three to six companies bid per contract.

We may not be successful in future bids and may fail to obtain new projects as a result. We believe we remain competitive in our pricing and delivery schedules for wind towers, but we cannot assure you our competitors will not underbid us. If we are unable to maintain our good relationships and qualified supplier status with the utilities, we may not be allowed to participate in the bidding process on new projects. Our license to manufacture Class III A2 pressure vessels expires in January 2013, and, although management believes we will be able to renew the license without issue, if we are unable to renew our license, we may not be able to bid on new wind tower contracts. Furthermore, we must maintain sufficient capital to source deposits made in connection with our bids, which may limit our ability to optimize our working capital allocation. To the extent we are unsuccessful in our bids to provide wind towers to new wind power projects, our future growth may be materially and adversely affected.

We derive a substantial part of our revenues from several major customers. If we lose any of these customers or they reduce the amount of business they do with us, our revenues may be seriously affected.

Our four largest customers accounted for approximately 51% of total sales for the fiscal year ended December 31, 2009, and our largest customer accounted for approximately 19% of total sales in the fiscal year ended December 31, 2009. Our four largest customers accounted for approximately 85% of total sales for the nine months ended September 30, 2010, and our largest customer accounted for approximately 24% of total sales for the nine months ended September 30, 2010. These customers may not maintain the same volume of business with us in the future. If we lose any of these customers or they reduce the amount of business they do with us, our revenues and profitability may be seriously affected. With our recent entry into the wind tower market, we expect to generate significant revenues from a limited number of large-scale industrial customers. We do not foresee our relying on these same customers for revenue generation as we introduce new product lines and new generations of existing product lines because we expect our customers to change with each large-scale project. We cannot be assured, however, that we will be able to introduce successfully new products for large-scale projects in the future.

Additionally, many of our customers purchase our equipment as part of their capital budget. As a result, we are dependent upon receiving orders from companies that are either expanding their business, commencing a new business, upgrading their capital equipment or otherwise require capital equipment. Our business is therefore dependent upon both the economic health of these industries and our ability to offer products that meet regulatory requirements, including environmental requirements, of these industries and are cost justifiable, based on potential regulatory compliance and cost savings in using our equipment in contrast to existing equipment or equipment offered by others. Any economic slowdown can affect all purchasers and manufacturers of capital equipment, and we cannot assure you that our business will not be significantly impaired as a result of the current worldwide economic downturn.

If we lose our key personnel, or are unable to attract and retain additional qualified personnel, the quality of our services may decline and our business may be adversely impacted.

We rely heavily on the expertise, experience and continued services of our senior management, including our Chief Executive Officer, Ms. Bei Lu. Loss of her services could adversely impact our ability to achieve our business objectives. Ms. Lu is a key factor in our success at establishing relationships with the major utility and industrial companies using our products because of her extensive industry experience and reputation. The continued development of our business depends upon the continued employment of Ms. Lu. We do not currently have an employment agreement with Ms. Lu, and her standard labor contract does not include provisions for non-competition or confidentiality.

We believe our future success will depend upon our ability to retain key employees and our ability to attract and retain other skilled personnel. The rapid growth of the economy in China has caused intense competition for qualified personnel. We cannot guarantee that any employee will remain employed by us for any definite period of time or that we will be able to attract, train or retain qualified personnel in the future. Such loss of personnel could have a material adverse effect on our business and company. Moreover, qualified employees periodically are in great demand and may be unavailable in the time frame required to satisfy our customers' requirements. We need to employ additional personnel to expand our business. There is no assurance we will be able to attract and retain sufficient numbers of highly skilled employees in the future. The loss of personnel or our inability to hire or retain sufficient personnel at competitive rates could impair the growth of our business.

We may not be able to keep pace with competition in our industry.

Our business is subject to risks associated with competition from new or existing industry participants who may have more resources and better access to capital. Many of our competitors and potential competitors may have substantially greater financial and government support, technical and marketing resources, larger customer bases, longer operating histories, greater name recognition and more established relationships in the industry than we do. Among other things, these industry participants compete with us based upon price, quality, location and available capacity. We cannot be sure we will have the resources or expertise to compete successfully in the future. Some of our competitors may also be able to provide customers with additional benefits at lower overall costs to increase market share. We cannot be sure we will be able to match cost reductions by our competitors or that we will be able to succeed in the face of current or future competition. In addition, we may face competition from our customers as they seek to become more vertically integrated in order to offer full service packages. Some of our customers are also performing more services themselves.

Our manufacturing facilities are located in one of the top wind power production regions of China, thereby lowering transportation costs for delivery of our wind towers and providing us a competitive advantage when bidding on new wind tower contracts in the region. We currently are the sole certified wind tower manufacturer in Tieling, Liaoning Province. Our competitive advantage in the region based on location would be harmed if a competitor established wind tower manufacturing facilities in or around Tieling.

We will face different market dynamics and competition as we develop new products to expand our target markets. In some markets, our future competitors would have greater brand recognition and broader distribution than we currently enjoy. We may not be as successful as our competitors in generating revenues in those markets due to the lack of recognition of our brand, lack of customer acceptance, lack of product quality history and other factors. As a result, any new expansion efforts could be more costly and less profitable than our efforts in our existing markets.

If we are not as successful as our competitors in our target markets, our sales could decline, our margins could be impacted negatively and we could lose market share, any of which could materially harm our business.

Our products may contain defects, which could adversely affect our reputation and cause us to incur significant costs.

Despite testing by us, defects may be found in existing or new products. Any such defects could cause us to incur significant return and exchange costs, re-engineering costs, divert the attention of our engineering personnel from product development efforts, and cause significant customer relations and business reputation problems. Any such defects could force us to undertake a product recall program, which could cause us to incur significant expenses and could harm our reputation and that of our products. If we deliver defective products, our credibility and the market acceptance and sales of our products could be harmed.

7

The nature of our products creates the possibility of significant product liability and warranty claims, which could harm our business.

Material failure of any of our wind towers, bellows expansion joints or pressure vessels would have a material adverse effect on our business. Customers use some of our products in potentially hazardous applications that can cause injury or loss of life and damage to property, equipment or the environment. In addition, some of our products are integral to the production process for some end-users and any failure of our products could result in a suspension of operations. Although we perform extensive non-destructive testing on our products prior to delivery, we cannot be certain our products will be completely free from defects. Our wind towers are designed to exceed the entire expected life of its wind turbine installation, typically 20 years, but we cannot assure you of the operational life of our wind towers or about their medium to long-term performance and operational reliability. As of September 30, 2010, we have delivered 137 wind tower units. Moreover, we do not have any product liability insurance and may not have adequate resources to satisfy a judgment in the event of a successful claim against us. While we have not yet experienced any product liability claims against us, as a result of our limited operating history, we cannot predict whether product liability claims will be brought against us in the future or the impact of any resulting negative publicity on our business. The successful assertion of product liability claims against us could result in potentially significant monetary damages and require us to make significant payments.

We do not accrue any warranty reserve because of our extensive quality control procedures and short warranty period, factors which we believe will result in no warranty expenses. Moreover, we have no historic basis to establish a reserve because of our limited operating history and lack of warranty expense since our commencement of production.

We offer a warranty on our products to each of our customers to repair or replace any defective product during the warranty term, which is a negotiated term of up to 24 months from the customer acceptance date, but we record no reserve for warranty claims currently. Warranty expense accrual is a company estimate of future warranty claims primarily based on our extensive testing and quality control procedures with consideration also given to our history of no prior warranty claims and abbreviated operating history. As of September 30, 2010, the Company had not incurred any warranty expense since our commencement of production in 2009. The Company has implemented a stringent set of internal manufacturing protocols to ensure product quality beginning at the time raw materials are received into our facilities up to the final inspection at the time products are shipped to the customer, including extensive non-destructive tests for defect detection. During the manufacturing process, both our internal quality control staff and our customers' full time onsite inspectors track and inspect the work in progress. Additionally, our products are tested by the Bureau of Quality and Technical Supervision under national standards. Upon receiving the products, our customers will inspect the products further prior to acceptance. The Company has analyzed the need to make warranty accruals and concluded, based on the aforementioned factors, that such accrual is not necessary. Although we believe our making of no accrual for warranty expense is appropriate given our belief that our stringent set of internal manufacturing protocols, redundant testing and inspection of products and short term of warranty period together limit our potential warranty expenses, if the Company incurs warranty claims in the future, we would be required to adjust the reserve and accrue for warranty expense accordingly.

We are a major purchaser of certain raw materials that we use in the manufacturing process of our products, and price changes for the commodities we depend on may adversely affect our profitability.

The Company's largest raw materials purchases consist of stainless steel and carbon steel. As such, fluctuations in the price of steel in the domestic market will have an impact on the Company's operating costs and related profits. International steel prices were lower in 2009 than in 2008, but prices have increased in 2010 along with the general economic recovery. The iron ore import price in China has also increased since 2009, which will impact the price and volume of steel produced by the China domestic steel industry.

Our profitability depends in part upon the margin between the cost to us of certain raw materials, such as stainless steel and carbon steel, used in the manufacturing process, as well as our fabrication costs associated with converting such raw materials into assembled products, compared to the selling price of our products, and the overall supply of raw materials. It is our intention to base the selling prices of our products in part upon the associated raw materials costs to us. However, we may not be able to pass all increases in raw material costs and ancillary acquisition costs associated with taking possession of the raw materials through to our customers. Although we are currently able to obtain adequate supplies of raw materials, it is impossible to predict future availability or pricing. The inability to offset price increases of raw material by sufficient product price increases, and our inability to obtain raw materials, would have a material adverse effect on our consolidated financial condition, results of operations and cash flows.

The Company does not engage in hedging transactions to protect against raw material fluctuations. We attempt to mitigate the short-term risks of price swings of raw materials by obtaining firm pricing commitments from our suppliers in advance for inclusion in our bids for large sales contracts. This strategy for controlling raw material costs on large sales of our wind towers and other fabricated metal specialty components is intended to help lock in our margins at the time the bid is awarded or we enter into the sales contract.

As the wind power industry continues to be a larger part of our business, our business will become more seasonal.

Our business is subject to seasonal-related fluctuations in sales volumes because we sell products that are installed outdoors and, consequently, weather conditions may affect demand for our products. Sales of our wind towers to the wind power industry in the northern provinces of China are affected by seasonal variations in both weather and customer operations. Utilities typically place requests for proposals for new wind tower contracts in the fourth and first calendar quarters according to their internal operational schedules and annual budget requirements. In order to satisfy delivery schedules under these contracts, we manufacture most of our wind towers during the second and third calendar quarters for delivery in the second, third and fourth calendar quarters. Customers request delivery during these quarters when the weather conditions in the northern provinces of China, where our manufacturing facilities and our customers' wind farms are located, are more favorable for the installation of wind towers by the customer. As we expect the majority of our future revenues and earnings will be from the sale of wind towers to the wind power industry in China, our business will become more affected by the industry's seasonal variations.

If we are not able to manage our rapid growth, we may not be profitable.

Our business has undergone rapid growth since we commenced production in early 2009. For the nine month period ending September 30, 2010, our net revenue was \$14.7 million, a 440% increase over the twelve month period ended December 31, 2009. Our continued success will depend on our ability to expand and manage our operations and facilities. There can be no assurance we will be able to manage our growth, meet the staffing requirements for our business or successfully assimilate and train new employees. In addition, to manage our growth effectively, we may be required to expand our management base and enhance our operating and financial systems. If we continue to grow, there can be no assurance the management skills and systems currently in place will be adequate. Moreover, there can be no assurance we will be able to manage any additional growth effectively. Failure to achieve any of these goals could have a material adverse effect on our business, financial condition or results of operations.

We may need additional capital to execute our business plan and fund operations and may not be able to obtain such capital on acceptable terms or at all.

In connection with the rapid development and expansion of our business, we will incur significant capital and operational expenses. Management anticipates that our existing capital resources and cash flows from operations and from our recent private placement transaction and current short-term bank loans will be adequate to satisfy our liquidity requirements for the next 12 months. However, if available liquidity is not sufficient to meet our plans for expansion, current operating expenses and loan obligations as they come due, our plans include considering pursuing alternative financing arrangements. Our ability to obtain additional capital on acceptable terms or at all is subject to a variety of uncertainties, including:

- § investors' perceptions of, and demand for, companies in our industry;
- § investors' perceptions of, and demand for, companies operating in China;
- § conditions of the United States and other capital markets in which we may seek to raise funds;
- § our future results of operations, financial condition and cash flows;
- § governmental regulation of foreign investment in companies in particular countries;
- § economic, political and other conditions in the United States, China, and other countries; and
- § governmental policies relating to foreign currency borrowings.

We may be required to pursue sources of additional capital through various means, including joint venture projects and debt or equity financings. There is no assurance we will be successful in locating a suitable financing transaction in a timely fashion or at all. In addition, there is no assurance we will obtain the capital we require by any other means. Future financings through equity investments are likely to be dilutive to our existing shareholders. Also, the terms of securities we may issue in future capital transactions may be more favorable for our new investors. Newly issued securities may include preferences or superior voting rights, be combined with the issuance of warrants or other derivative securities, or be the issuances of incentive awards under equity employee incentive plans, which may have additional dilutive effects. Furthermore, we may incur substantial costs in pursuing future capital and financing, including investment banking fees, legal fees, accounting fees, printing and distribution expenses and other costs. We may also be required to recognize non-cash expenses in connection with certain securities we may issue, such as convertible notes and warrants, which will adversely impact our financial condition.

If we cannot raise additional funds on favorable terms or at all, we may not be able to carry out all or parts of our strategy to maintain our growth and competitiveness or to fund our operations. If the amount of capital we are able to raise from financing activities, together with our revenues from operations, is not sufficient to satisfy our capital needs, even to the extent that we reduce our operations accordingly, we may be required to cease operations.

We may not be able to attract the attention of major brokerage firms because we became public by means of a share exchange.

There may be risks associated with our becoming public through the Share Exchange Agreement. Analysts of major brokerage firms may not provide our company coverage because there is no incentive for brokerage firms to recommend the purchase of our common stock. Furthermore, we can give no assurance that brokerage firms will, in the future, want to conduct any secondary offerings on our behalf.

Our accounts receivables remain outstanding for a significant period of time, which has a negative impact on our cash flow and liquidity.

Our agreements with our customers generally provide that 30% of the purchase price is due upon the placement of an order, 30% upon reaching certain milestones in the manufacturing process and 30% upon customer acceptance of the product. As a common practice in the manufacturing business in China, payment of the final 10% of the purchase price is due no later than the termination date of our warranty period, which is a negotiated term of up to 24 months from the acceptance date. We account for payments received from customers prior to customer acceptance of the product as unearned revenue.

We are required to maintain various licenses and permits regarding our manufacturing business, and the loss of or failure to renew any or all of these licenses and permits may require the temporary or permanent suspension of some or all of our operations.

In accordance with the laws and regulations of the PRC, we are required to maintain various licenses and permits in order to operate our manufacturing business. We are required to acquire a manufacturing license for specialized equipment from the State General Administration of the PRC for Quality Supervision and Inspection and Quarantine in order to manufacture pressure vessels of the Class III A2 grade. Many large-scale industrial companies in China require manufacturers like us to have this Class III A2 grade manufacturing license before allowing for the submission of bids on contracts for fabricated metal specialty components such as wind towers. Our nondestructive radiological testing of products includes the use of x-rays for defect detection and we are required to maintain our defect detection room in compliance with PRC Ministry of Health standards for radiological protection standards for industrial x-rays. Failure to maintain these standards, or the loss of or failure to renew such licenses and production permits, could result in the temporary or permanent suspension of some or all of our production or distribution operations and could adversely affect our revenues and profitability.

We may experience material disruptions to our manufacturing operations.

While we seek to operate our facilities in compliance with applicable rules and regulations and take measures to minimize the risks of disruption at our facilities, a material disruption at one of our manufacturing facilities could prevent us from meeting customer demand, reduce our sales and/or negatively impact our financial results. Any of our manufacturing facilities, or any of our machines within an otherwise operational facility, could cease operations unexpectedly due to a number of events, including: prolonged power failures; equipment failures; disruptions in the transportation infrastructure including roads, bridges, railroad tracks; and fires, floods, earthquakes, acts of war, or other catastrophes.

We cannot be certain our product innovations and marketing successes will continue.

We believe our past performance has been based on, and our future success will depend, in part, upon our ability to continue to improve our existing products through product innovation and to develop, market and produce new products. We cannot assure you that we will be successful in introducing, marketing and producing any new products or product innovations, or that we will develop and introduce in a timely manner innovations to our existing products which satisfy customer needs or achieve market acceptance. Our failure to develop new products and introduce them successfully and in a timely manner could harm our ability to grow our business and could have a material adverse effect on our business, results of operations and financial condition.

The technology used in our products may not satisfy the changing needs of our customers.

While we believe we have hired or engaged personnel who have the experience and ability necessary to keep pace with advances in technology, and while we continue to seek out and develop “next generation” technology through our research and development efforts, there is no guarantee we will be able to keep pace with technological developments and market demands in our target industries and markets. Although certain technologies in the industries we occupy are well established, we believe our future success depends in part on our ability to enhance our existing products and develop new products in order to continue to meet customer demands. With any technology, including the technology of our current and proposed products, there are risks that the technology may not address successfully all of our customers’ needs. Moreover, our customers’ needs may change or vary. This may affect the ability of our present or proposed products to address all of our customers’ ultimate technology needs in an economically feasible manner, which could have a material adverse effect on our business.

Our insurance coverage may be inadequate to protect us from potential losses.

We do not maintain business interruption insurance. The insurance industry in China is in its early stage of development and the business interruption insurance and the product liability insurance available currently in China offers limited coverage compared to that offered in many other countries, especially in the United States. Any business disruption or natural disaster could result in substantial costs and a diversion of resources, which would have a material and adverse effect on our business and results of operations. On the other hand, our business operations, particularly our production facilities, involve risks and hazards that could result in damage to, or destruction of, property and machinery, personal injury, business interruption and possible legal liability. In addition, we do not have product liability insurance covering bodily injuries and property damage caused by the products we sell. Therefore, as with other manufacturers of fabricated metal specialty components in China, we are exposed to risks associated with product liability claims and may need to bear the litigation cost if the use of our products results in bodily injury or property damage. We do not carry key-man life insurance, and if we lose the services of any senior management and key personnel, we may not be able to locate suitable or qualified replacements, and may incur additional expenses to recruit and train new personnel, which could severely disrupt our business and prospects. Furthermore, we do not have property insurance and as such we are exposed to risks associated with losses in values of our equipment, facilities and inventory due to fire, earthquake, flood and a wide range of natural disasters. We do not have personal injury insurance and accidental medical care insurance. Although we require that the third-party transportation companies we engage maintain insurance policies with respect to inland transit risks for our products, the coverage may be inadequate to protect us from potential claims against us and the losses that may result.

We face risks associated with managing domestic operations.

All of our operations are conducted in China. There are a number of risks inherent in doing business in such market, including the following:

- § unfavorable political or economical factors;
- § fluctuations in foreign currency exchange rates;
- § potentially adverse tax consequences;
- § unexpected legal or regulatory changes;
- § lack of sufficient protection for intellectual property rights;
- § difficulties in recruiting and retaining personnel, and managing international operations; and
- § less developed infrastructure.

Our inability to manage successfully the risks in our China domestic activities could adversely affect our business. We can provide no assurances that any new market expansion will be successful because of the risks associated with conducting such operations, including the risks listed above.

We may not be able to protect our technology and other proprietary rights adequately.

Our success will depend in part on our ability to obtain and protect our products, methods, processes and other technologies, to preserve our trade secrets, and to operate without infringing on the proprietary rights of third parties, both domestically and abroad. Despite our efforts, any of the following may reduce the value of our owned and used intellectual property:

- § issued patents and trademarks that we own or have the right to use may not provide us with any competitive advantages;
- § our efforts to protect our intellectual property rights may not be effective in preventing misappropriation of our technology or that of those from whom we license our rights to use;
- § our efforts may not prevent the development and design by others of products or technologies similar to or competitive with, or superior to those we use or develop; or
- § another party may obtain a blocking patent and we or our licensors would need to either obtain a license or design around the patent in order to continue to offer the contested feature or service in our products.

Effective protection of intellectual property rights may be unavailable or limited in certain foreign countries. If we are unable to protect our proprietary rights adequately, it would have a negative impact on our operations.

We, or the owners of the intellectual property rights licensed to us, may be subject to claims that we or such licensors have infringed the proprietary rights of others, which could require us and our licensors to obtain a license or change designs.

Although we do not believe any of our products infringe upon the proprietary rights of others, there is no assurance that infringement or invalidity claims (or claims for indemnification resulting from infringement claims) will not be asserted or prosecuted against us or those from whom we have licenses or that any such assertions or prosecutions will not have a material adverse affect on our business. Regardless of whether any such claims are valid or can be asserted successfully, defending against such claims could cause us to incur significant costs and could divert resources away from our other activities. In addition, assertion of infringement claims could result in injunctions that prevent us from distributing our products. If any claims or actions are asserted against us or those from whom we have licenses, we may seek to obtain a license to the intellectual property rights that are in dispute. Such a license may not be available on reasonable terms, or at all, which could force us to change our designs.

Our business could be subject to environmental liabilities.

As is the case with manufacturers of similar products, we use certain hazardous substances in our operations. Currently, we do not anticipate any material adverse effect on our business, revenues or results of operations as a result of compliance with the environmental laws and regulations of the PRC. However, the risk of environmental liability and charges associated with maintaining compliance with PRC environmental laws is inherent in the nature of our business, and there is no assurance that material environmental liabilities and compliance charges will not arise in the future.

We will incur significant costs as a result of our operating as a public company and our management will be required to devote substantial time to new compliance initiatives.

While we are a public company, our compliance costs prior to the Share Exchange in July 2010 were not substantial in light of our limited operations. Creative Bellows never operated as a public company prior to the Share Exchange. As a public company with substantial operations, we will incur increased legal, accounting and other expenses. The costs of preparing and filing annual and quarterly reports, proxy statements and other information with the SEC and furnishing audited reports to shareholders is time-consuming and costly.

It will also be time-consuming, difficult and costly for us to develop and implement the internal controls and reporting procedures required by the Sarbanes-Oxley Act of 2002 (the "Sarbanes-Oxley Act"). Certain members of our management have limited or no experience operating a company whose securities are listed on a national securities exchange or with the rules and reporting practices required by the federal securities laws and applicable to a publicly traded company. We will need to recruit, hire, train and retain additional financial reporting, internal control and other personnel in order to develop and implement appropriate internal controls and reporting procedures. If we are unable to comply with the internal controls requirements of the Sarbanes-Oxley Act, we may not be able to obtain the independent accountant certifications required by the Sarbanes-Oxley Act.

If we fail to establish and maintain an effective system of internal controls, we may not be able to report our financial results accurately or prevent fraud. Any inability to report and file our financial results accurately and timely could harm our business and adversely impact the trading price of our common stock.

We are required to establish and maintain internal controls over financial reporting, disclosure controls, and to comply with other requirements of the Sarbanes-Oxley Act and the rules promulgated by the SEC. Our management, including our Chief Executive Officer and Chief Financial Officer, cannot guarantee that our internal controls and disclosure controls will prevent all possible errors or prevent all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. In addition, the design of a control system must reflect the fact that there are resource constraints and the benefit of controls must be relative to their costs. Because of the inherent limitations in all control systems, no system of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty and that breakdowns can occur because of simple error or mistake. Furthermore, controls can be circumvented by individual acts of some persons, by collusion of two or more persons, or by management override of the controls. The design of any system of controls is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Over time, a control may become inadequate because of changes in conditions or the degree of compliance with policies or procedures may deteriorate. Because of inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and may not be detected.

We are a holding company that depends on cash flow from our wholly owned subsidiaries to meet our obligations.

After the Share Exchange, we became a holding company with no material assets other than the stock of our wholly owned subsidiaries, Creative Bellows and Creative Wind Power, which is a wholly owned subsidiary of Creative Bellows. Accordingly, Creative Bellows and Creative Wind Power will conduct all of our operations, which are responsible for research, production and delivery of goods. We currently expect that we will primarily retain the earnings and cash flow of our subsidiaries for use by us in our operations.

All of Creative Bellows' liabilities survived the Share Exchange and there may be undisclosed liabilities that could have a negative impact on our financial condition.

Before the Share Exchange, certain due diligence activities on the Company and Creative Bellows were performed. The due diligence process may not have revealed all liabilities (actual or contingent) of the Company and Creative Bellows that existed or which may arise in the future relating to the Company's activities before the consummation of the Share Exchange. Notwithstanding that all of the Company's pre-closing liabilities were transferred to a third party pursuant to the terms of the Share Exchange Agreement, it is possible that claims for such liabilities may still be made against us, which we will be required to defend or otherwise resolve. The transfer pursuant to the Share Exchange Agreement may not be sufficient to protect us from claims and liabilities, and any breaches of related representations and warranties. Any liabilities remaining from the Company's pre-closing activities could harm our financial condition and results of operations.

New accounting standards could result in changes to our methods of quantifying and recording accounting transactions, and could affect our financial results and financial position.

Changes to the U.S. Generally Accepted Accounting Principles arise from new and revised standards, interpretations, and other guidance issued by the Financial Accounting Standards Board, the SEC, and others. In addition, these or other U.S. entities may issue new or revised Cost Accounting Standards or Cost Principles. The effects of such changes may include prescribing an accounting method where none had been previously specified, prescribing a single acceptable method of accounting from among several acceptable methods that currently exist, or revoking the acceptability of a current method and replacing it with an entirely different method, among others. Such changes could result in unanticipated effects on our results of operations, financial position, and other financial measures.

Risks Related to Our Business being Conducted in China

China's economic policies could affect our business.

All of our assets are located in China and all of our revenue is derived from our operations in China. Accordingly, our results of operations and prospects are subject, to a significant extent, to the economic, political and legal developments in China. While China's economy has experienced significant growth in the past twenty years, such growth has been uneven, both geographically and among various sectors of the economy. The PRC government has implemented various measures to encourage economic growth and guide the allocation of resources. Some of these measures benefit the overall economy of China, but they may also have a negative effect on us. For example, operating results and financial condition may be adversely affected by the government control over capital investments or changes in tax regulations. The economy of China has been transitioning from a planned economy to a more market-oriented economy. In recent years, the PRC government has implemented measures emphasizing the utilization of market forces for economic reform and the reduction of state ownership of productive assets, and the establishment of corporate governance in business enterprises; however, a substantial portion of productive assets in China are still owned by the PRC government. In addition, the PRC government continues to play a significant role in regulating industry development by imposing industrial policies. It also exercises significant control over China's economic growth through the allocation of resources, the control of payment of foreign currency-denominated obligations, the setting of monetary policy and the provision of preferential treatment to particular industries or companies.

We may have difficulty establishing adequate management, legal and financial controls in China.

Historically, China has not adopted a Western style of management or financial reporting concepts and practices, nor modern banking, computer and other control systems. We may have difficulty in hiring and retaining a sufficient number of qualified employees to work in China. As a result of these factors, we may experience difficulty in establishing management, legal and financial controls, collecting financial data and preparing financial statements, books of account and corporate records and instituting business practices that meet Western standards.

Our bank accounts are not insured or protected against loss.

We maintain our cash with various national banks located in China. Our cash accounts are not insured or otherwise protected. Should any bank holding our cash deposits become insolvent, or if we are otherwise unable to withdraw funds, we would lose the cash on deposit with that particular bank.

We have limited business insurance coverage and may incur losses due to business interruptions resulting from natural and man-made disasters, and our insurance may not be adequate to cover liabilities resulting from accidents or injuries that may occur.

The insurance industry in China is still in an early stage of development and insurance companies located in China offer limited business insurance products. In the event of damage or loss to our properties, our insurance may not provide as much coverage as if we were insured by insurance companies in the United States. We currently carry property and casualty insurance for our buildings, plant and equipment but cannot assure you that the coverage will be adequate to replace fully any damage to any of the foregoing. Should any natural catastrophes such as earthquakes, floods, or any acts of terrorism occur where our primary operations are located and most of our employees are based, or elsewhere, we might suffer not only significant property damage, but also loss of revenues due to interruptions in our business operations. The occurrence of a significant event for which we are not fully insured or indemnified, and/or the failure of a party to meet its underwriting or indemnification obligations, could materially and adversely affect our operations and financial condition. Moreover, no assurance can be given that we will be able to maintain adequate insurance in the future at rates we consider reasonable.

We may face judicial corruption in China.

The political, governmental and judicial systems in China are sometimes impacted by corruption. There is no assurance we will be able to obtain recourse in any legal disputes with suppliers, customers or other parties with whom we conduct business, if desired, through China's poorly developed and sometimes corrupt judicial systems.

If relations between the United States and China worsen, investors may be unwilling to hold or buy our stock and our stock price may decrease.

At various times during recent years, the United States and China have had significant disagreements over political and economic issues. Controversies may arise in the future between these two countries. Any political or trade controversies between the United States and China, whether or not directly related to our business, could reduce the price of our common stock.

China could change its policies toward private enterprise or even nationalize or expropriate private enterprises.

Our business is subject to significant political and economic uncertainties and may be affected by political, economic and social developments in China. Over the past several years, the PRC government has pursued economic reform policies including the encouragement of private economic activity and greater economic decentralization. The PRC government may not continue to pursue these policies or may significantly alter them to our detriment from time to time with little, if any, prior notice.

Changes in policies, laws and regulations or in their interpretation or the imposition of confiscatory taxation, restrictions on currency conversion, restrictions or prohibitions on dividend payments to shareholders, or devaluations of currency could cause a decline in the price of our common stock, should a market for our common stock ever develop. Nationalization or expropriation could even result in the total loss of your investment.

The nature and application of many laws of China create an uncertain environment for business operations and they could have a negative effect on us.

The legal system in China is a civil law system. Unlike the common law system, the civil law system is based on written statutes in which decided legal cases have little value as precedents. In 1979, China began to promulgate a comprehensive system of laws and has since introduced many laws and regulations to provide general guidance on

economic and business practices in China and to regulate foreign investment. Progress has been made in the promulgation of laws and regulations dealing with economic matters such as corporate organization and governance, foreign investment, commerce, taxation and trade. The promulgation of new laws, changes to existing laws and the abrogation of local regulations by national laws could cause a decline in the price of our common stock. In addition, as these laws, regulations and legal requirements are relatively recent, their interpretation and enforcement involve significant uncertainty.

Fluctuation of the Renminbi may affect our financial condition and the value of our securities.

Although we use the United States dollar for financial reporting purposes, most of the transactions effected by our operating subsidiaries are denominated in China's Renminbi. The value of the Renminbi fluctuates and is subject to changes in China's political and economic conditions. Since July 2005, the Renminbi has not been pegged to the U.S. dollar. Although the People's Bank of China regularly intervenes in the foreign exchange market to prevent significant short-term fluctuations in the exchange rate, the Renminbi may appreciate or depreciate significantly in value against the U.S. dollar in the medium to long term. Moreover, it is possible that in the future the PRC authorities may lift restrictions on fluctuations in the Renminbi exchange rate and lessen intervention in the foreign exchange market.

Future movements in the exchange rate of the Renminbi could adversely affect our financial condition as we may suffer financial losses when transferring money raised outside of China into the country or paying vendors for services performed outside of China. Moreover, fluctuations in the exchange rate between the U.S. dollar and the Renminbi will affect our financial results reported in U.S. dollar terms without giving effect to any underlying change in our business, financial condition or results of operations. The value of our common stock likewise will be affected by the foreign exchange rate between U.S. dollars and RMB, and between those currencies and other currencies in which our sales may be denominated. Fluctuations in the exchange rate will also affect the relative value of any dividend we may issue in the future that will be exchanged into U.S. dollars and earnings from, and the value of, any U.S. dollar-denominated investments we make in the future. For example, if we need to convert U.S. dollars into RMB for our operational needs and the RMB appreciates against the U.S. dollar at that time, our financial position, our business, and the price of our common stock may be harmed. Conversely, if we decide to convert our RMB into U.S. dollars for the purpose of declaring dividends on our common stock or for other business purposes and the U.S. dollar appreciates against the RMB, the U.S. dollar equivalent of our earnings from our subsidiaries in China would be reduced.

Inflation in China could negatively affect our profitability and growth.

The rapid growth of China's economy has been uneven among economic sectors and geographical regions of the country. China's economy grew at an annual rate of 9.60% in the third quarter of 2010, as measured by the year-over-year change in Gross Domestic Product, according to the National Bureau of Statistics of China. Rapid economic growth can lead to growth in the money supply and rising inflation. According to the National Bureau of Statistics of China, the inflation rate in China declined in the second half of 2008 and much of 2009 during the current worldwide economic downturn, before climbing again to a high point of 1.9% in 2009, as compared to 8.7% and 6.9% in 2008. The inflation rate in China is expected to continue to increase in 2010 as the worldwide economy recovers, reaching 3.6% as of September 2010. If prices for our products and services fail to rise at a rate sufficient to compensate for the increased costs of supplies, such as raw materials, due to inflation, it may have an adverse effect on our profitability.

Furthermore, in order to control inflation in the past, the PRC government has imposed controls on bank credits, limits on loans for fixed assets and restrictions on state bank lending. The implementation of such policies may impede future economic growth. The People's Bank of China, the central bank of the PRC, kept interest rates fixed during the recent economic crisis, but in the past has effected increases in the interest rates in response to inflationary concerns in the China's economy. If the central bank raises interest rates from the current crisis levels, economic activity in China could slow and, in turn, materially increase our costs and reduce demand for our products and services.

We may not be able to obtain regulatory approvals for our products.

The PRC and local provincial governments regulate the manufacture and sale of our products in China. Although our licenses and regulatory filings are up to date, the uncertain legal environment in China and our industry may be vulnerable to local government agencies or other parties who wish to renegotiate the terms and conditions of or terminate their agreements or other understandings with us.

It will be extremely difficult to acquire jurisdiction and enforce liabilities against our officers, directors and assets based in China.

As our executive officers and directors, including the Chairman of our Board of Directors, are citizens of the PRC, it may be difficult, if not impossible, to acquire jurisdiction over these persons in the event a lawsuit is initiated against us and/or our officers and directors by a shareholder or group of shareholders in the United States. Also, because our operating subsidiaries and assets are located in China, it may be extremely difficult or impossible for individuals to access those assets to enforce judgments rendered against us or our directors or executive offices by United States courts. In addition, the courts in China may not permit the enforcement of judgments arising out of United States federal and state corporate, securities or similar laws. Accordingly, United States investors may not be able to enforce judgments against us for violation of United States securities laws.

PRC regulations relating to mergers, off-shore companies and China resident shareholders, if applied to us, may limit our ability to operate our business as we see fit.

PRC regulations govern the process by which we may participate in an acquisition of assets or equity interests. Depending on the structure of the transaction, these regulations require involved parties to make a series of applications and supplemental applications to various government agencies. In some instances, the application process may require the presentation of economic data concerning a transaction, including appraisals of the target business and evaluations of the acquirer, which are designed to allow the government to assess the transaction. Government approvals will have expiration dates by which a transaction must be completed and reported to the government agencies. Compliance with the new regulations is likely to be more time consuming and expensive than in the past and

the government can now exert more control over the combination of two businesses. Accordingly, due to PRC regulations, our ability to engage in business combination transactions in China through our subsidiaries in China has become significantly more complicated, time consuming and expensive, and we may not be able to negotiate transactions acceptable to us or sufficiently protective of our interests.

Restrictions on currency exchange may limit our ability to receive and use our revenues effectively.

The Renminbi is currently convertible under the “current account,” which includes dividends, trade and service-related foreign exchange transactions, but not under the “capital account,” which includes foreign direct investment and loans. Currently, our China subsidiaries may purchase foreign currencies for settlement of current account transactions, including payments of dividends to us, without the approval of the State Administration of Foreign Exchange (“SAFE”). However, the relevant PRC government authorities may limit or eliminate their ability to purchase foreign currencies in the future. Since a significant amount of our future revenues will be denominated in Renminbi, any existing and future restrictions on currency exchange may limit our ability to utilize revenues generated in Renminbi to fund our business activities outside China that are denominated in foreign currencies.

Foreign exchange transactions by our China subsidiaries under the capital account continue to be subject to significant foreign exchange controls and require the approval of or need to register with PRC governmental authorities, including SAFE. In particular, if our China subsidiaries borrow foreign currency loans from us or other foreign lenders, these loans must be registered with SAFE, and if we finance our China subsidiaries by means of additional capital contributions, these capital contributions must be approved by certain government authorities, including the NDRC, Ministry of Commerce (“MOFCOM”), or their respective local counterparts. These limitations could affect the ability of our PRC subsidiaries to obtain foreign exchange through debt or equity financing.

Recent PRC regulations relating to the registration requirements for China resident shareholders owning shares in off-shore companies as well as registration requirements of employee stock ownership plans or share option plans may subject the Company’s China resident shareholders to personal liability and limit its ability to acquire companies in China or to inject capital into its operating subsidiaries in China, limit its subsidiaries’ ability to distribute profits to the Company, or otherwise materially and adversely affect the Company.

The SAFE issued a public notice in October 2005 (“Circular 75”) requiring PRC residents, including both legal persons and natural persons, to register with the competent local SAFE branch before establishing or controlling any company outside of China, referred to as an “off-shore special purpose company,” for the purpose of acquiring any assets of or equity interest in PRC companies and raising funds from overseas. In addition, any PRC resident who is the shareholder of an off-shore special purpose company is required to amend his or her SAFE registration with the local SAFE branch, with respect to that off-shore special purpose company in connection with any increase or decrease of capital, transfer of shares, merger, division, equity investment or creation of any security interest over any assets located in China. To clarify further the implementation of Circular 75, the SAFE issued Circular 124 and Circular 106 on November 24, 2005 and May 29, 2007, respectively. Under Circular 106, PRC subsidiaries of an off-shore special purpose company are required to coordinate and supervise the filing of SAFE registrations by the off-shore holding company’s shareholders who are PRC residents in a timely manner. If these shareholders fail to comply, the PRC subsidiaries are required to report to the local SAFE authorities. If the PRC subsidiaries of the off-shore parent company do not report to the local SAFE authorities, they may be prohibited from distributing their profits and proceeds from any reduction in capital, share transfer or liquidation to their off-shore parent company and the off-shore parent company may be restricted in its ability to contribute additional capital into its PRC subsidiaries. Moreover, failure to comply with the above SAFE registration requirements could result in liabilities under PRC laws for evasion of foreign exchange restrictions. We cannot predict fully how Circular 75 will affect our business operations or future strategies because of ongoing uncertainty over how Circular 75 will be interpreted and implemented, and how or whether SAFE will apply it to us.

We have requested our PRC resident beneficial owners, including our Chairman, to make the necessary applications, filings and amendments as required under SAFE regulations in connection with their equity interests in us. We attempt to ensure that our subsidiaries in China comply, and that our PRC resident beneficial owners subject to these rules comply, with the relevant SAFE regulations. The Company cannot provide any assurances that all of our present or prospective direct or indirect PRC resident beneficial owners will comply fully with all applicable registrations or required approvals. The failure or inability of our PRC resident beneficial owners to comply with the applicable SAFE registration requirements may subject these beneficial owners or the Company to fines, legal sanctions and restrictions described above.

On March 28, 2007, SAFE released detailed registration procedures for employee stock ownership plans or share option plans to be established by overseas listed companies and for individual plan participants. Any failure to comply with the relevant registration procedures may affect the effectiveness of the Company’s employee stock ownership plans or share option plans and subject the plan participants, the companies offering the plans or the relevant intermediaries, as the case may be, to penalties under PRC foreign exchange regime. To date, all grants of options have been solely to U.S. citizens. The Company has no employee stock ownership plan or share option plan in effect.

These penalties may subject the Company to fines and legal sanctions, prevent the Company from being able to make distributions or pay dividends, as a result of which the Company's business operations and its ability to distribute profits could be materially and adversely affected.

The Company's PRC subsidiary may be exposed to penalties by the PRC government due to noncompliance with taxation, land use and construction administration, environmental and employment rules.

While the Company believes its PRC subsidiary has been in compliance with PRC taxation, land use and construction administration, environmental and employment rules during its operations in China, the Company has not obtained letters from the competent PRC government authorities confirming such compliance. If any competent PRC government authority takes the position that there is noncompliance with the taxation, land use and construction administration, environmental or employment rules by the Company's PRC subsidiary, it may be exposed to penalties by such PRC government authority, in which case the operation of the Company's PRC subsidiary in question may be adversely affected.

We operate in the PRC through our wholly owned operating entities initially approved by the local office of the PRC Ministry of Commerce (“MOFCOM's Local Counterpart”). However, we cannot warrant that such approval procedures have been completely satisfied due to a number of reasons, including changes in laws and government interpretations.

Our operating entities in the PRC have received initial approval from MOFCOM's Local Counterpart and there may be conditions subsequent to complete and maintain such approval. We believe we have satisfied the approval procedures of MOFCOM's Local Counterpart. However, the approval procedures of MOFCOM's Local Counterpart or interpretations of its approval procedures may be different from our understanding or may change. As a result, if our approval is revoked by MOFCOM's Local Counterpart for any reason, there may be a material adverse effect on our business, financial condition, results of operations, reputation and prospects, as well as the trading price of our shares.

Tax laws and regulations in China are subject to substantial revision, some of which may adversely affect our profitability.

The PRC tax system is in a state of flux, and it is anticipated that China's tax regime will be altered in the coming years. Tax benefits that we presently enjoy may not be available to us in the wake of these changes, and we could incur tax obligations to the PRC government that are significantly higher than currently anticipated. These increased tax obligations could negatively impact our financial condition and our revenues, gross margins, profitability and results of operations may be adversely affected as a result.

Certain tax treatment for which we are eligible in China remains subject to approval and is scheduled to expire over the next several years.

Our operations are located in a privileged economic zone in China and, as of October 2010, Creative Bellows has been classified as a “high technology enterprise” eligible for certain tax benefits, including a preferential 15% enterprise income tax rate instead of the standard 25% enterprise income tax rate. These tax benefits will not take effect, however, until we receive approval by the local tax bureau, which remains pending. If approved, the tax benefits will be retroactive for 2010 and the income tax we paid in 2010 under the higher standard rate either will be refunded to us or offset in future periods and recorded as income tax benefit. Our eligibility for the tax benefits lasts until December 31, 2012. When the tax benefits expire, and if our favorable tax treatment is not continued, our income tax expenses will increase, reducing our net income below what it would be if we continued to enjoy these exemptions.

We must comply with the Foreign Corrupt Practices Act.

We are required to comply with the United States Foreign Corrupt Practices Act (the “FCPA”), which prohibits U.S. companies from engaging in bribery or other prohibited payments to foreign officials for the purpose of obtaining or retaining business. Foreign companies, including some of our competitors, are not subject to these prohibitions. Corruption, extortion, bribery, pay-offs, theft and other fraudulent practices occur from time-to-time in mainland China. If our competitors engage in these practices, they may receive preferential treatment from personnel of some companies, giving our competitors an advantage in securing business or from government officials who might give them priority in obtaining new licenses, which would put us at a disadvantage. Although we inform our personnel that such practices are illegal, we cannot assure you that our employees or other agents will not engage in such conduct for which we might be held responsible. If our employees or other agents are found to have engaged in such practices, we could suffer severe penalties.

Risks Related to Our Securities

The market price for our common stock may be volatile.

The trading price of our common stock may fluctuate widely in response to various factors, some of which are beyond our control. These factors include, but not limited to, our quarterly operating results or the operating results of other companies in our industry, announcements by us or our competitors of acquisitions, new products, product improvements, commercial relationships, intellectual property, legal, regulatory or other business developments and changes in financial estimates or recommendations by stock market analysts regarding us or our competitors. In addition, the stock market in general, and the market for companies based in China in particular, has experienced extreme price and volume fluctuations. This volatility has had a significant effect on the market prices of securities issued by many companies for reasons unrelated or disproportionate to their operating performance. These broad market fluctuations may materially affect our stock price, regardless of our operating results. Furthermore, the market for our common stock is limited and we cannot assure you that a larger market will ever be developed or maintained. The price at which investors purchase shares of our common stock may not be indicative of the price that will prevail in the trading market. Market fluctuations and volatility, as well as general economic, market and political conditions, could reduce our market price. As a result, these factors may make it more difficult or impossible for you to sell our common stock for a positive return on your investment.

Shares of our common stock lack a significant trading market.

Shares of our common stock are not yet eligible for trading on any national securities exchange. Our common stock may be quoted in the over-the-counter market on the OTC Bulletin Board or in what are commonly referred to as “pink sheets.” These markets are highly illiquid. Although we have applied for listing of our common stock on the NASDAQ Stock Market, a national securities exchange, there can be no assurance of if and when such application would be granted. There is no assurance that an active trading market in our common stock will develop, or if such a market develops, that it will be sustained. In addition, there is a greater chance for market volatility for securities quoted on the OTC Bulletin Board as opposed to securities traded on a national exchange. This volatility may be caused by a variety of factors, including the lack of readily available quotations, the absence of consistent administrative supervision of “bid” and “ask” quotations and generally lower trading volume. As a result, an investor may find it more difficult to dispose of, or to obtain accurate quotations as to the market value of, our common stock, or to obtain coverage for significant news events concerning us, and the common stock could become substantially less attractive for margin loans, for investment by financial institutions, as consideration in future capital raising transactions or for other purposes.

Future sales of shares of our common stock by our shareholders could cause our stock price to decline.

Future sales of shares of our common stock could adversely affect the prevailing market price of our stock. If our significant shareholders sell a large number of shares, or if we issue a large number of shares, the market price of our stock could decline. Moreover, the perception in the public market that shareholders might sell shares of our stock could depress the market for our shares. If our shareholders who received shares of our common stock issued in the Share Exchange sell substantial amounts of our common stock in the public market upon the effectiveness of a registration statement, or upon the expiration of any holding period under Regulation S, such sales could create a circumstance commonly referred to as an “overhang” and in anticipation of which the market price of our common stock could fall. The existence of an overhang, whether or not sales have occurred or are occurring, also could make it more difficult for us to raise additional financing through the sale of equity or equity-related securities in the future at a time and price we deem reasonable or appropriate. The shares of common stock issued in the Share Exchange will be freely tradable upon the earlier of (i) effectiveness of a registration statement covering such shares and (ii) the date on which such shares may be sold without registration pursuant to Regulation S under the Securities Act and the sale of such shares could have a negative impact on the price of our common stock.

We may issue additional shares of our capital stock or debt securities to raise capital or complete acquisitions, which would reduce the equity interest of our shareholders.

Our Articles of Incorporation authorize the issuance of up to 100,000,000 shares of common stock, par value \$.00001 per share, and 100,000,000 shares of preferred stock, par value \$.00001 per share. As of November 15, 2010, there were approximately 76,673,368 authorized and unissued shares of our common stock that have not been reserved and are available for future issuance and 100,000,000 authorized and unissued shares of our preferred stock that have not been reserved and are available for future issuance. Although we have no commitments as of the date of this registration statement to issue our securities, we may issue a substantial number of additional shares of our common stock to complete a business combination or to raise capital. The issuance of additional shares of our common stock may (i) significantly reduce the equity interest of our existing shareholders and (ii) adversely affect prevailing market prices for our common stock.

The application of the “penny stock” rules could adversely affect the market price of our common stock and increase your transaction costs to sell those shares.

Our common stock may be subject to the “penny stock” rules adopted under Section 15(g) of the Securities Exchange Act of 1934. The penny stock rules apply to non-NASDAQ-listed issuers whose common stock trades at less than \$5.00 per share or that have a tangible net worth of less than \$5,000,000 (\$2,000,000 if the company has been operating for three or more years). The penny stock rules require a broker-dealer, prior to a transaction in a penny stock not otherwise exempt from those rules, to deliver a standardized risk disclosure document prepared by the SEC, which contains the following information:

§ a description of the nature and level of risk in the market for penny stocks in both public offerings and secondary trading;

§ a description of the broker’s or dealer’s duties to the customer and of the rights and remedies available to the customer with respect to violation to such duties or other requirements of securities laws;

§ a brief, clear, narrative description of a dealer market, including “bid” and “ask” prices for penny stocks and the significance of the spread between the “bid” and “ask” prices;

§ a toll free telephone number for inquiries on disciplinary actions;

§ definitions of any significant terms in the disclosure document or in the conduct of trading in penny stocks; and

§ such other information and is in such form (including language, type, size and format), as the SEC shall require by rule or regulation.

Prior to effecting any transaction in penny stock, the broker-dealer also must provide the customer with the following information:

§ bid and offer quotations for the penny stock;

§ compensation of the broker-dealer and our salesperson in the transaction;

§ number of shares to which such bid and ask prices apply, or other comparable information relating to the depth and liquidity of the market for such stock; and

§ monthly account statements showing the market value of each penny stock held in the customer's account.

The penny stock rules further require that, prior to a transaction in a penny stock not otherwise exempt from those rules, the broker-dealer must make a special written determination that the penny stock is a suitable investment for the purchaser and receive the purchaser's written acknowledgment of the receipt of a risk disclosure statement, a written agreement to transactions involving penny stocks and a signed and dated copy of a written suitability statement.

Due to the requirements of the penny stock rules, many brokers have decided not to trade penny stocks. As a result, the number of broker-dealers willing to act as market makers in such securities is limited. If we remain subject to the penny stock rules for any significant period, that could have an adverse effect on the market, if any, for our securities. Moreover, if our securities are subject to the penny stock rules, investors will find it more difficult to dispose of our securities.

We have not paid dividends in the past and do not expect to pay dividends in the future. Any return on investment may be limited to the value of our common stock.

We have never paid cash dividends on our common stock and do not anticipate doing so in the foreseeable future. The payment of dividends on our common stock will depend on earnings, financial condition and other business and economic factors affecting it at such time as the Board of Directors may consider relevant. If we do not pay dividends, our common stock may be less valuable because a return on your investment will occur only if our stock price appreciates.

Capital outflow policies in China may hamper our ability to declare and pay dividends to our shareholders.

China has currency and capital transfer regulations, which may require us to comply with complex regulations for the movement of capital. Although our management believes we will be in compliance with these regulations, should these regulations or the interpretation of them by courts or regulatory agencies change, we may not be able to pay dividends to our shareholders outside of China. In addition, under current PRC law, we must retain a reserve equal to 10% of net income after taxes, not to exceed 50% of registered capital. Accordingly, this reserve will not be available to be distributed as dividends to our shareholders. We presently do not intend to pay dividends in the foreseeable future. Our management intends to follow a policy of retaining all of our earnings to finance the development and execution of our strategy and the expansion of our business.

Our principal shareholder has the ability to exert significant control in matters requiring a shareholder vote and could delay, deter or prevent a change of control in our company.

As of November 15, 2010, Ms. Bei Lu, our Chairman and Chief Executive Officer, and our largest shareholder, beneficially owned approximately 41.74% of our outstanding shares. Ms. Lu possesses significant influence over us, giving her the ability, among other things, to exert significant control over the election of all or a majority of the Board of Directors and to approve significant corporate transactions. Such stock ownership and control may also have the effect of delaying or preventing a future change in control, impeding a merger, consolidation, takeover or other business combination, or discouraging a potential acquirer from making a tender offer or otherwise attempting to obtain control of our company. Without the consent of Ms. Lu, we could be prevented from entering into potentially beneficial transactions if they conflict with our principal shareholder's interests. The interests of this shareholder may differ from the interests of our other shareholders.

Provisions in our Articles of Incorporation and Amended and Restated Bylaws could make it very difficult for you to bring any legal actions against our directors or officers for violations of their fiduciary duties or could require us to pay any amounts incurred by our directors or officers in any such actions.

Pursuant to our Articles of Incorporation, members of our Board of Directors and our officers will have no liability for breaches of their fiduciary duty of care as a director or officer, except in limited circumstances. This means you may be unable to prevail in a legal action against our directors or officers even if you believe they have breached their fiduciary duty of care. In addition, our Articles of Incorporation and Amended and Restated Bylaws allow us to indemnify our directors and officers from and against any and all costs, charges and expenses resulting from their acting in such capacities with us. This means if you were able to enforce an action against our directors or officers, in all likelihood, we would be required to pay any expenses they incurred in defending the lawsuit and any judgment or settlement they otherwise would be required to pay.

Taxation

We will not obtain an opinion of legal counsel regarding the United States income tax consequences of an investment in our securities.

We will not obtain an opinion of counsel regarding the U.S. income tax consequences of investing in our securities including whether we will be treated as a company for U.S. income tax purposes. Recent changes in tax laws have not, as yet, been the subject of administrative or judicial scrutiny or interpretation. Moreover, there is no assurance that future legislation may not further affect the tax consequences of an investment in our securities. **INVESTORS ARE URGED TO CONSULT WITH THEIR TAX ADVISORS REGARDING THE POSSIBLE U.S. FEDERAL, STATE, AND LOCAL TAX CONSEQUENCES OF INVESTING IN OUR SECURITIES.**

FORWARD-LOOKING STATEMENTS

This report contains forward-looking statements regarding CleanTech that include, but are not limited to, statements concerning our projected revenues, expenses, gross profit and income, mix of revenue, demand for our products, the benefits and potential applications for our products, the need for additional capital, our ability to obtain and successfully perform additional new contract awards and the related funding and profitability of such awards, the competitive nature of our business and markets, and product qualification requirements of our customers. These forward-looking statements are based on our current expectations, estimates and projections about our industry, management's beliefs, and certain assumptions made by us. Words such as "anticipates," "expects," "intends," "plans," "predicts," "potential," "believes," "seeks," "hopes," "estimates," "should," "may," "will," "with a view to" and variations of these similar expressions are intended to identify forward-looking statements. These statements are not guarantees of future performance and are subject to risks, uncertainties and assumptions that are difficult to predict. Therefore, our actual results could differ materially and adversely from those expressed in any forward-looking statements as a result of various factors. Such factors include, but are not limited to the following:

- § Our goals and strategies;
- § Our expansion plans;
- § Our future business development, financial conditions and results of operations;
- § The expected growth of the markets for our products;
- § Our expectations regarding demand for our products;
- § Our expectations regarding keeping and strengthening our relationships with key customers;
- § Our ability to stay abreast of market trends and technological advances;
- § Competition in our industries in China;
- § General economic and business conditions in the regions in which we sell our products;
- § Relevant government policies and regulations relating to our industries; and
- § Market acceptance of our products.

These forward-looking statements involve various risks and uncertainties. Although we believe our expectations expressed in these forward-looking statements are reasonable, our expectations may later be found to be incorrect. Our actual results could be materially different from our expectations. Important risks and factors that could cause our actual results to be materially different from our expectations are generally set forth in "Risk Factors," "Management's Discussion and Analysis of Financial Condition and Results of Operations," "Our Business," and other sections in this prospectus. You should read thoroughly this prospectus and the documents we refer to with the understanding that our actual future results may be materially different from and worse than what we expect. We qualify all of our forward-looking statements by these cautionary statements. Other sections of this prospectus include additional factors which could adversely impact our business and financial performance.

This prospectus contains statistical data we obtained from various publicly available government publications. Statistical data in these publications also include projections based on a number of assumptions. The markets for our

products may not grow at the rate projected by market data, or at all. The failure of these markets to grow at the projected rates may have a material adverse effect on our business and the market price of our securities. In addition, the rapidly changing nature of our customers' industries results in significant uncertainties in any projections or estimates relating to the growth prospects or future condition of our markets. Furthermore, if any one or more of the assumptions underlying the market data is later found to be incorrect, actual results may differ from the projections based on these assumptions. You should not place undue reliance on these forward-looking statements.

Unless otherwise indicated, information in this prospectus concerning economic conditions and our industry is based on information from independent industry analysts and publications, as well as our estimates. Except where otherwise noted, our estimates are derived from publicly available information released by third party sources, as well as data from our internal research, and are based on such data and our knowledge of our industry, which we believe to be reasonable. None of the independent industry publication market data cited in this prospectus was prepared on our or our affiliates' behalf.

The forward-looking statements made in this prospectus relate only to events or information as of the date on which the statements are made in this prospectus. Except as required by law, we undertake no obligation to update or revise publicly any forward-looking statements, whether as a result of new information, future events or otherwise, after the date on which the statements are made or to reflect the occurrence of unanticipated events. You should read this prospectus and the documents we refer to in this prospectus and have filed as exhibits to the registration statement, of which this prospectus is a part, completely and with the understanding that our actual future results may be materially different from what we expect.

AVAILABLE INFORMATION

This prospectus is part of a registration statement on Form S-1 we have filed with the SEC. We have not included in this prospectus all of the information contained in the registration statement and you should refer to our registration statement and its exhibits for further information.

We file annual, quarterly, and special reports, proxy statements and other information with the SEC. You may read and copy any materials we file with the SEC at the SEC's Public Reference Room at 100 F Street, NE, Washington, DC 20549, on official business days during the hours of 10 a.m. to 3 p.m. You may obtain information about the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. Our filings are also available to the public from commercial document retrieval services and at the website maintained by the SEC at www.sec.gov.

Our website address is www.ctiproduct.com. The information on our website is not incorporated into this prospectus.

USE OF PROCEEDS

We will not receive any proceeds from sale of the shares of common stock covered by this prospectus by the selling shareholders. To the extent the selling shareholders exercise for cash all of the warrants covering the 833,310 shares of common stock issuable upon exercise of all of the warrants, we would receive \$2,499,930 from such exercises. The warrants may expire without having been exercised. Even if some or all of these warrants are exercised, we cannot predict when they will be exercised and when we would receive the proceeds. We intend to use any proceeds we receive upon exercise of the warrants for general working capital and other corporate purposes.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION
AND RESULTS OF OPERATIONS

Safe Harbor Declaration

The comments made throughout this prospectus should be read in conjunction with our Financial Statements and the Notes thereto, and other financial information appearing elsewhere in this document. In addition to historical information, the following discussion and other parts of this document contain certain forward-looking information. When used in this discussion, the words, “believes,” “anticipates,” “expects,” and similar expressions are intended to identify forward-looking statements. Such statements are subject to certain risks and uncertainties, which could cause actual results to differ materially from projected results, due to a number of factors beyond our control. CleanTech does not undertake to publicly update or revise any of its forward-looking statements, even if experience or future changes show that the indicated results or events will not be realized. Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof. Readers are also urged to carefully review and consider our discussions regarding the various factors, which affect the company’s business, included in this section and elsewhere in this prospectus.

Overview

We are a manufacturer of structural towers for megawatt-class wind turbines as well as other highly engineered clean technology metal components in the PRC. We currently design, manufacture, test and sell structural towers for 1MW and 1.5MW on-land and 3MW off-shore wind turbines and have the expertise and manufacturing capability to provide towers for larger MW on-land and off-shore turbines as they become more prevalent in China. We are currently the only certified wind tower manufacturer within Tieling, Liaoning Province, which provides significant competitive advantage in supplying towers into the wind-rich northern provinces of China. We also manufacture patented, specialty metal products that require advanced manufacturing and engineering capabilities, including bellows expansion joints and connecting bend pipes used for waste heat recycling in steel production and in ultra-high-voltage electricity transmission grids, as well as industrial pressure vessels. Our products provide clean technology solutions for China’s increasing energy demand and environmental issues.

We operate through two wholly owned subsidiaries organized under the laws of the PRC – Creative Bellows and Creative Wind Power. Creative Bellows, which was incorporated on September 17, 2007, is our WFOE and it owns 100% of Creative Wind Power, which was incorporated on May 26, 2009. Creative Bellows produces bellows expansion joints, pressure vessels and other fabricated metal specialty products. Creative Wind Power markets and sells wind towers designed and manufactured by Creative Bellows, which provides the production expertise, employees and facilities for wind tower production.

On June 18, 2010, CleanTech Innovations, Inc. (FKA: Everton Capital Corporation), a U.S. shell company incorporated in the State of Nevada on May 9, 2006, authorized an 8-for-1 forward split of its common stock, effective on July 2, 2010. Prior to the forward split, CleanTech had 5,501,000 shares of common stock outstanding, and, after giving effect to the forward split, CleanTech had 44,008,000 shares of common stock outstanding. CleanTech authorized the forward stock split to provide a sufficient number of shares to accommodate the trading of its common stock in the OTC marketplace after the acquisition of Creative Bellows as described below.

On July 2, 2010, Creative Bellows signed a share exchange agreement with CleanTech, whereby the shareholders of Creative Bellows received 15,122,000 shares in CleanTech. Concurrent with the share exchange agreement, CleanTech’s principal shareholder cancelled 40,000,000 shares in CleanTech for \$40,000. The cancelled shares were retired. CleanTech had 4,008,000 shares outstanding after the cancellation of the shares. After giving effect to the

foregoing transactions, the shareholders of Creative Bellows owned 79.05% of the 19,130,000 shares outstanding of CleanTech. The transaction was accounted for as a recapitalization of CleanTech and not as a business combination. Simultaneously with the share exchange agreement, CleanTech changed its year end from August to December.

On July 12, 2010, CleanTech completed a closing of a private placement of Units (as defined below) pursuant to which CleanTech sold 3,333,322 Units at \$3.00 per Unit for \$10,000,000. Each "Unit" consisted of one share of CleanTech's common stock and a three-year warrant to purchase 15% of one share of CleanTech's common stock at \$3.00 per share. The warrants are immediately exercisable, expire on the third anniversary of their issuance, and entitle the purchasers of the Units to purchase up to 499,978 shares of CleanTech's common stock at \$3.00 per share. The warrants may be called by CleanTech at any time after (i) the registration statement registering the common stock underlying the warrants becomes effective, (ii) the common stock is listed on a national securities exchange and (iii) the trading price of the common stock exceeds \$4.00. CleanTech also issued warrants to purchase 333,332 shares of common stock to the placement agents in the offering. The warrants granted to these placement agents had the same terms and conditions as the warrants granted in the offering. The warrants are exercisable into a fixed number of shares, solely redeemable by the Company and not redeemable by warrant holders. Accordingly, the warrants are classified as equity instruments.

Critical Accounting Policies

While our significant accounting policies are more fully described in Note 2 to our consolidated financial statements, we believe the following accounting policies are the most critical to aid you in fully understanding and evaluating this management discussion and analysis.

Basis of Presentation

The Company's financial statements are prepared in accordance with generally accepted accounting principles in the United States of America ("US GAAP").

Principles of Consolidation

The consolidated financial statements include the accounts of CleanTech, Creative Bellows and Creative Wind Power. All intercompany transactions and account balances are eliminated in consolidation.

Use of Estimates

In preparing financial statements in conformity with US GAAP, management makes estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the dates of the financial statements, as well as the reported amounts of revenues and expenses during the reporting year. Significant estimates, required by management, include the recoverability of long-lived assets and the valuation of inventories. Actual results could differ from those estimates.

Accounts Receivable and Retentions Receivable

The Company's policy is to maintain reserves for potential credit losses on accounts receivable. Management reviews the composition of accounts receivable and analyzes historical bad debts, customer concentrations, customer credit worthiness, current economic trends and changes in customer payment patterns to evaluate the adequacy of these reserves.

The retention rate generally was 10% of the sales price with a term of one to two years, but no later than the termination of the warranty period.

Inventories

The Company's inventories are valued at the lower of cost or market with cost determined on a weighted average basis. The Company compares the cost of inventories with the market value and allowance is made for writing down the inventories to their market value, if lower.

Revenue Recognition

The Company's revenue recognition policies are in compliance with Securities and Exchange Commission ("SEC") Staff Accounting Bulletin ("SAB") 104 (codified in Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") Topic 605). Sales revenue, including the final 10% of the purchase price, is recognized after delivery is complete, customer acceptance of the product occurs and collectability is reasonably assured. Customer acceptance occurs after the customer puts the product through a quality inspection, which normally is completed within one to two weeks from customer receipt of the product. The customer is responsible for installation and integration of our component products into their end products. Payments received before satisfaction of all relevant criteria for revenue recognition are recorded as unearned revenue. Unearned revenue consists of payments received from customers prior to customer acceptance of the products.

Sales revenue represents the invoiced value of goods, net of value-added tax (VAT). The Company's products sold and services provided in the PRC are subject to VAT of 17% of the gross sales price. This VAT may be offset by VAT paid by the Company on raw materials and other materials included in the cost of producing their finished product.

The Company recorded VAT payable and VAT receivable net of payments in the financial statements. The VAT tax return is filed offsetting the payables against the receivables.

Warranties

The Company offers a warranty to its customers on its products for up to 24 months depending on the terms negotiated with each customer. During the warranty period, the Company will repair or replace defective products free of charge. The Company commenced production in 2009 and, as of September 30, 2010, has yet to incur any warranty expense. The Company has implemented a stringent set of internal manufacturing protocols to ensure product quality beginning at the time raw materials are received into our facilities up to the final inspection at the time products are shipped to the customer. The Company's protocol establishes stringent requirements and specifications products must meet before they are allowed to move into the next phase of the manufacturing process. This process was established to ensure each individual piece of work in progress meets strict technical standards. During the manufacturing process, both our internal quality control staff and our customers' full time onsite inspectors track and inspect the work in progress. The products are allowed to move to the next phase of the manufacturing process only after both parties have approved of the product quality. Prior to shipping the products, the Company performs non-destructive tests on the products for defect detection, including radiological (x-ray), ultrasonic, pneumatic, hydraulic and gas leakage tests. Additionally, our products are tested by the Bureau of Quality and Technical Supervision under national standards. Upon receiving the products, our customers will inspect the products further prior to acceptance. The Company has analyzed the need to make warranty accruals and concluded that such accrual is not necessary because of the following:

§ Clearly defined procedures in our manufacturing protocol to ensure product quality based on technical parameters;
§ Existence of redundancies in testing and inspection of our products; and
§ Short term of our warranty period, which is no more than 24 months.

However, the Company will monitor warranty claims and accrue for warranty expense accordingly, using ASC Topic 450 to account for our standard warranty.

The Company provides its warranty to all customers and does not consider it an additional service; rather, the warranty is considered an integral part of the product's sale. There is no general right of return indicated in the contracts or purchase orders. If a product under warranty is defective or malfunctioning, the Company is responsible for fixing it or replacing it with a new product. The Company's products are the only deliverables.

The Company provides after-sales services at a charge after expiration of the warranty period. We recognize such revenue when service is provided.

Foreign Currency Translation and Transactions and Comprehensive Income (Loss)

The accompanying consolidated financial statements are presented in United States Dollars ("USD"). The Company's functional currency is the USD, while the Company's wholly owned subsidiaries' functional currency is the Renminbi ("RMB"). The functional currencies of the Company's foreign operations are translated into USD for balance sheet accounts using the current exchange rates in effect as of the balance sheet date and for revenue and expense accounts using the average exchange rate during the fiscal year. The translation adjustments are recorded as a separate component of stockholders' equity, captioned "Accumulated other comprehensive income (loss)." Gains and losses resulting from transactions denominated in foreign currencies are included in other income (expense) in the consolidated statements of operations. There have been no significant fluctuations in the exchange rate for the conversion of RMB to USD after the balance sheet date.

Segment Reporting

SFAS 131, "Disclosures about Segments of an Enterprise and Related Information" (codified in FASB ASC Topic 280), requires use of the "management approach" model for segment reporting. The management approach model is based on the way a company's management organizes segments within the company for making operating decisions and assessing performance. Reportable segments are based on products and services, geography, legal structure, management structure or any other manner in which management disaggregates a company.

Management determined that all of its product lines – wind towers, bellows expansion joints and pressure vessels – constituted a single reportable segment in accordance with ASC 280. The Company operates exclusively in one business: the design and manufacture of highly engineered clean technology metal components for heavy industry. The manufacturing processes for each of our products, principally the rolling and welding of raw steel materials, make use of the same pool of production workers and engineering talent for design, fabrication, assembly and testing. Our products are characterized and marketed by their ability to withstand temperature, pressure, structural load and other environmental factors. Our products are used by major electrical utilities and large-scale industrial companies in China specializing in heavy industry, and our sales force sells our products directly to these companies, who utilize our components in their finished products. All of our long-lived assets for production are located in our facilities in Tieling, Liaoning Province, China, and operate within the same environmental, safety and quality regulations governing industrial component manufacturing companies. We established our subsidiary, Creative Wind Power, solely for the purpose of marketing and selling our wind towers, which constitute the structural support cylinder for an industrial wind turbine installation. Management believes that the economic characteristics of our product lines, specifically costs and gross margin, will be similar as production increases and labor continues to be shared across

products.

Our initial sales in 2009 consisted primarily of bellows expansion joints and pressure vessels and reflected pricing based on lower sales volume of higher margin products with unique customer design requirements, which resulted in gross margins of approximately 51%. This concentration of higher margin products and low sales volume created higher gross margins for these products as of the nine months ended September 30, 2009, that management believes are not sustainable as production volume increases and products become more diversified. At nine months ended September 30, 2010, in the aggregate, the gross margins for our bellows expansion joints and pressure vessels decreased as our mix of bellows expansion joints and pressure vessels broadened to include more components with lower margins. We expect a further decrease in the gross margins going forward for bellows expansion joints and pressure vessels as these products continue to broaden and normalize.

We initiated sales of our wind towers in the second quarter of 2010 and we expect the majority of our sales going forward will be of wind towers. Initial gross margins of our wind towers were impacted by one-time startup costs of approximately \$100,000, production inefficiencies associated with the introduction of a new product line and lower sales volume, which reduced gross margins significantly at the time the startup costs were incurred, because our total revenues for the second quarter of 2010 were \$1.7 million. We experienced an increase in gross margins for our wind towers in the third quarter ended September 30, 2010, over the second quarter ended June 30, 2010, because of increased sales volume, improved production efficiencies and the elimination of certain startup costs. We expect a further increase in the gross margins of our wind towers going forward. In addition, our blended gross margin of approximately 29% for the nine months ended September 30, 2010, was lower than for the nine months ended September 30, 2009, largely because the gross profits from bellows expansion joints and pressure vessels trended downward toward more sustainable levels from their unusually high levels of 51% in 2009.

As our overall mix of products and product gross margins broadens and sales volume increases, we expect the gross margins of all our product lines to converge and stabilize toward the current blended gross margin of approximately 29%. As a result, management views the Company's business and operations for all product lines as a blended gross margin when determining future growth, return on investment and cash flows. Accordingly, management has concluded the Company had one reportable segment in accordance with ASC 280 because (i) all of our products are created with similar production processes, in the same facilities, under the same regulatory environment and sold to similar customers using similar distribution systems; and (ii) gross margins of all product lines have and should continue to converge.

RESULTS OF OPERATIONS

Nine Months Ended September 30, 2010, compared to the Nine Months Ended September 30, 2009

The following table presents the consolidated results of operations for the nine months ended September 30, 2010, compared to the nine months ended September 30, 2009.

	2010		2009	
	\$	% of Sales	\$	% of Sales
Net sales	14,739,702	100%	978,623	100%
Cost of goods sold	10,519,685	71%	478,343	49%
Gross profit	4,220,017	29%	500,280	51%
Operating expenses	1,012,202	7%	241,636	25%
Income from operations	3,207,815	22%	258,644	26%
Other income, net	691,956	5%	136,211	14%
Income tax expense	(996,785)	(7)%	(98,714)	(10)%
Net income	2,902,986	20%	296,141	30%

NET SALES

Net sales for the nine months ended September 30, 2010, increased to \$14,739,702 from \$978,623 for the nine months ended September 30, 2009. Net sales for the nine months ended September 30, 2010, consisted of \$13.59 million in sales of wind towers and \$1.14 million in sales of bellows expansion joints and pressure vessels, while our net sales for the same period in 2009 consisted entirely of bellows expansion joints and pressure vessels. The increase in net sales was attributable to our commencement of production and sales of wind towers in the second and third quarters of 2010.

COST OF GOODS SOLD

Cost of goods sold for the nine months ended September 30, 2010, increased to \$10,519,685 from \$478,343 for the nine months ended September 30, 2009. Cost of goods sold includes material costs, primarily steel, and labor costs and related overhead. The increase in cost of goods sold is attributed to the introduction and significant increase of production and sales volume of our wind tower products in the nine months ended September 30, 2010. Cost of goods sold as a percentage of net sales for the nine months ended September 30, 2010, were 71% compared to 49% for the same period in 2009. The increase in cost of goods sold as a percentage of sales was mainly due to the commencement and increased sales and production of wind towers in 2010 and by certain one-time startup and production costs of approximately \$100,000 that were not associated with our other more established products. Additionally, cost of goods sold as a percentage of net sales increased as sales volume increased and our mix of bellows expansion joints and pressure vessels shifted to include lower margin offerings in the product lines.

GROSS PROFIT

Gross profit for the nine months ended September 30, 2010, increased to \$4,220,017 from \$500,280 for the nine months ended September 30, 2009. Gross profit margin decreased to 29% for the nine months ended September 30, 2010, from 51% for the same period in 2009.

Our initial sales in 2009 consisted primarily of bellows expansion joints and pressure vessels, which reflected pricing based on lower sales volume of higher margin products with unique customer design requirements and resulted in gross profit margins of 51%. The concentration of higher margin products and low sales volume in the nine months ended September 30, 2009, caused an unusually high gross profit margin that management does not believe is sustainable in the future. In the nine months ended September 30, 2010, gross profit margins for our bellows expansion joint and pressure vessel products decreased from the nine months ended September 30, 2009, as expected by management as we sold a more diversified mix of products. In the nine months ended September 30, 2010, the Company increased its sales of wind towers, which also reduced overall gross profit margins. Management believes the sales of bellows expansion joints and pressure vessels will continue to diversify and, as wind tower production continues to increase along with manufacturing efficiency and the elimination of one-time startup costs of approximately \$100,000, the gross profit margins of all three product lines will converge toward the current blended gross profit margin of approximately 29%.

OPERATING EXPENSES

Operating expenses for the nine months ended September 30, 2010, increased to \$1,012,202 from \$241,636 for the nine months ended September 30, 2009. Operating expenses consists of selling, general and administrative expenses. The increase in operating expenses resulted from increased selling costs of our products and the general expansion of our business, including the expansion of our sales team. Operating expenses as a percentage of net sales for the nine months ended September 30, 2010, was 7% compared to 25% for the same period in 2009. This decrease was the result of increased efficiencies resulting from higher sales.

NET INCOME

Net income for the nine months ended September 30, 2010, increased to \$2,902,986 from \$296,141 for the nine months ended September 30, 2009. Net income as a percentage of net sales for the nine months ended September 30, 2010, was 20% compared to 30% for the same period in 2009. This increase in net income was attributable to our increased sales of our products and increase in our subsidy income, which was a grant from the Administrative Committee of Liaoning Province Tieling Economic & Technological Development Zone to attract businesses with high-tech products. The grant is not required to be repaid.

Year Ended December 31, 2009, compared to the Year Ended December 31, 2008

The following table presents the consolidated results of operations of Creative Bellows and Creative Wind Power for the year ended December 31, 2009, compared to the year ended December 31, 2008.

	2009		2008	
	\$	% of Sales	\$	% of Sales
Net sales	2,730,954	100%	-	NA%
Cost of goods sold	1,301,400	48%	-	NA%
Gross profit	1,429,554	52%	-	NA%
Operating expenses	427,260	15%	139,381	NA%
Income (loss) from operations	1,002,294	37%	(139,381)	NA%
Other income, net	111,169	4%	493,412	NA%
Income tax expense	282,098	10%	-	NA%
Net income	831,365	31%	354,031	NA%

NET SALES

Net sales for 2009 were \$2,730,954. The Company incorporated in September 2007 and was in the development stage from inception through the beginning of 2009. The Company started generating sales in 2009, principally from sales of bellows expansion joints and pressure vessels to customers in China.

COST OF GOODS SOLD

Cost of goods sold includes material costs, labor costs and related overhead, which are directly or indirectly attributable to our products. For 2009, cost of goods sold was \$1,301,400 or 48% of net sales. Approximately 42% of the cost of goods sold was from bellows expansion joints, one of the major products of the Company. The percentage of cost of goods sold for the sales of bellows expansion joints was 44%.

GROSS PROFIT

Gross profit for 2009 was \$1,429,554 or 52%, which resulted from sales of our bellows expansion joints and pressure vessels.

OPERATING EXPENSES

Operating expenses consisted of selling, general and administrative expenses totaling \$427,260 for 2009, compared to \$139,381 for 2008, an increase of \$287,879 or 207%. The increase in operating expenses was due primarily to the commencement of production and sales of our products in 2009, which resulted in increased salary, freight, research and development cost, land use tax and amortization of intangible assets.

NET INCOME

For 2009, net income was \$831,365 compared to \$354,031 for 2008, an increase of \$477,334, or 135%. This increase in net income was mainly due to the commencement of sales in 2009. Most income in 2009 was generated from sales of our products, whereas in 2008, income was from subsidy income, a grant from the Administrative Committee of Liaoning Province Tieling Economic & Technological Development Zone to attract businesses with high-tech products. The grant was for general working capital needs without any conditions and restrictions, and is not required to be repaid. The grant was determined based on the investment amount by the Company and its floor space occupied in such zone. There was no income tax for the grant received in 2008.

LIQUIDITY AND CAPITAL RESOURCES

Nine Months Ended September 30, 2010, compared to the Nine Months Ended September 30, 2009

Operations and liquidity needs are funded primarily through cash flows from operations, short-term borrowings and shareholder contributions. The cash is used in operations and plant construction.

As of September 30, 2010, the Company had cash and equivalents of \$397,876, other current assets of \$18,262,889, and current liabilities of \$10,562,286. Working capital was \$8,098,479 at September 30, 2010. The ratio of current assets to current liabilities was 1.8-to-1 as of September 30, 2010.

The following is a summary of cash provided by or used in each of the indicated types of activities during the nine months ended September 30, 2010 and 2009, respectively:

	2010	2009
Cash provided by (used in):		
Operating activities	\$ (9,334,523)	\$(1,671,529)
Investing activities	(3,032,517)	(311,117)
Financing activities	11,355,553	2,195,518

Net cash used in operating activities was \$9,334,523 in the nine months ended September 30, 2010, compared to net cash used in operating activities of \$1,671,529 in the comparable period of 2009. The increase in net cash used in operating activities during the nine months ended September 30, 2010, was mainly due to increased outstanding accounts receivable, retention receivable and other receivables despite a significant increase in net income, as well as increased payment of advance to suppliers and inventory, and increased restricted cash as a performance guarantee to customers resulting from our increased sales.

Net cash used in investing activities was \$3,032,517 during the nine months ended September 30, 2010, compared to net cash used in investing activities of \$311,117 during the comparable period of 2009. The cash used in investing activities in 2010 was for the purchase of property and equipment of \$2.08 million, purchase of a patent of \$74,988 and construction in progress of \$876,207, while cash used in investing activities in the nine months ended September 30, 2009, was mainly for a long term investment of \$87,821 into a local credit union and construction in progress of

\$195,698.

Net cash provided by financing activities was \$11,355,553 in the nine months ended September 30, 2010, compared to net cash provided by financing activities of \$2,195,518 in the same period of 2009. The increase in cash inflow in 2010 consisted of \$2.43 million in cash contributions by shareholders, net proceeds of \$8.25 million received through a private placement offering, and \$675,795 net cash proceeds from bank loans net of repayment. In the same period of 2009, we had \$2.19 million in proceeds from bank loans.

Year Ended December 31, 2009, compared to the Year Ended December 31, 2008

Operations and liquidity needs are funded primarily through cash flows from operations, short-term borrowings and shareholder contributions. The cash is used in operations and plant construction.

As of December 31, 2009, the Company had cash and equivalents of \$1,295,145, other current assets of \$2,109,408, and current liabilities of \$5,157,488. Working capital deficit was \$1,752,935 at December 31, 2009. The ratio of current assets to current liabilities was 0.66-to-1 as of December 31, 2009.

The following is a summary of cash provided by or used in each of the indicated types of activities during the years ended December 31, 2009 and 2008, respectively:

	2009	2008
Cash provided by (used in):		
Operating activities	\$ (565,706)	\$ 1,349,222
Investing activities	(1,385,676)	(4,643,319)
Financing activities	3,220,612	-

Net cash used in operating activities was \$565,706 in 2009, compared to net cash provided by operating activities of \$1,349,222 in 2008. The increase in net cash used in operating activities during 2009 was mainly due to the increased accounts receivable, other receivables and payments for prepaid expenses and inventory, despite a significant increase in net income.

Net cash used in investing activities was \$1,385,676 in 2009, compared to net cash used in investing activities of \$4,643,319 in 2008. The cash used in investing activities in 2009 was for the purchase of property and equipment of \$52,581, construction in progress of \$1.25 million and a long term investment of \$87,353 in a local credit union, whereas cash used in investing activities in 2008 was mainly for the purchase of land use rights and construction in progress.

Net cash provided by financing activities was \$3,220,612 in 2009, compared to net cash provided by financing activities of \$0 in 2008. The increased cash provided by financing activities was due primarily to proceeds from short term loans from Credit Unions. The due date of all the loans was May 26, 2010. The loans were not subject to any covenants and were paid in full in August 2010.

Our standard payment terms in our arrangements with our customers generally provide that 30% of the purchase price is due upon the placement of an order, 30% is due upon reaching certain milestones in the manufacturing process and 30% is due upon customer inspection and acceptance of the product, which customers normally complete within one to two weeks after delivery. As a common practice in the manufacturing business in China, payment of the final 10% of the purchase price is due no later than the termination date of the product warranty period, which can be up to 24 months from the customer acceptance date. Payment terms are negotiated on a case-by-case basis and these payment percentages and terms may differ for each customer. We may experience payment delays from time to time of up to six months from the due date, but we fully expect to receive all payments based on the contracted terms despite any customer delays in payment. Our collections are reasonably assured because the majority of our customers are large, well-capitalized state-owned and publicly traded utility and industrial companies with stable operations. Furthermore, we do not believe the delays have a significant negative impact on our liquidity as payment delays are very common in the manufacturing industry in China.

As of December 31, 2009, the Company had an accounts receivable balance of \$1,320,899, of which \$231,399 of the accounts receivable had aging over 180 days. As of September 30, 2010, the Company had an accounts receivable balance of \$11,056,451, of which \$6,454,506 was current, \$3,016,898 had aging over 30 days, \$1,210,276 had aging over 90 days and \$374,771 had aging over 180 days. The Company expects all accounts receivable, including those aged over 180 days as of September 30, 2010, to be collected because the respective customers are large state-owned or publicly listed utilities and we are confident that payment will be received.

Recent Accounting Pronouncements

In April 2010, the FASB codified the consensus reached in Emerging Issues Task Force Issue No. 08-09, "Milestone Method of Revenue Recognition." FASB Accounting Standards Update ("ASU") No. 2010-17 provides guidance on defining a milestone and determining when it may be appropriate to apply the milestone method of revenue recognition for research and development transactions. FASB ASU No. 2010-17 is effective for fiscal years beginning on or after June 15, 2010, and is effective on a prospective basis for milestones achieved after the adoption date. The

Company does not expect this ASU will have a material impact on its financial position or results of operations when it adopts this update on January 1, 2011.

On March 5, 2010, the FASB issued ASU No. 2010-11 Derivatives and Hedging Topic 815, "Scope Exception Related to Embedded Credit Derivatives." This ASU clarifies the guidance within the derivative literature that exempts certain credit related features from analysis as potential embedded derivatives requiring separate accounting. The ASU specifies that an embedded credit derivative feature related to the transfer of credit risk that is only in the form of subordination of one financial instrument to another is not subject to bifurcation from a host contract under ASC 815-15-25, Derivatives and Hedging – Embedded Derivatives – Recognition. All other embedded credit derivative features should be analyzed to determine whether their economic characteristics and risks are "clearly and closely related" to the economic characteristics and risks of the host contract and whether bifurcation is required. The ASU was effective for the Company on July 1, 2010. Early adoption is permitted. The adoption of this ASU did not have a material impact on the Company's consolidated financial statements.

On February 25, 2010, the FASB issued ASU 2010-09 Subsequent Events Topic 855, "Amendments to Certain Recognition and Disclosure Requirements," effective immediately. The amendments in the ASU remove the requirement for an SEC filer to disclose a date through which subsequent events have been evaluated in both issued and revised financial statements. Revised financial statements include financial statements revised as a result of either correction of an error or retrospective application of US GAAP. The FASB believes these amendments remove potential conflicts with the SEC's literature. The adoption of this ASU did not have a material impact on the Company's consolidated financial statements.

In October 2009, the FASB issued ASU No. 2009-13 on ASC 605, Revenue Recognition – Multiple Deliverable Revenue Arrangement – a consensus of the FASB Emerging Issues Task Force (ASU 2009-13). ASU 2009-13 amended guidance related to multiple-element arrangements which requires an entity to allocate arrangement consideration at the inception of an arrangement to all of its deliverables based on their relative selling prices. The consensus eliminates the use of the residual method of allocation and requires the relative-selling-price method in all circumstances. All entities must adopt the guidance no later than the beginning of their first fiscal year beginning on or after June 15, 2010. Entities may elect to adopt the guidance through either prospective application for revenue arrangements entered into, or materially modified, after the effective date or through retrospective application to all revenue arrangements for all periods presented. We are currently evaluating the impact, if any, of ASU 2009-13 on our financial position and results of operations.

In October 2009, the FASB issued an ASU regarding accounting for own-share lending arrangements in contemplation of convertible debt issuance or other financing. This ASU requires that at the date of issuance of the shares in a share-lending arrangement entered into in contemplation of a convertible debt offering or other financing, the shares issued shall be measured at fair value and be recognized as an issuance cost, with an offset to additional paid-in capital. Further, loaned shares are excluded from basic and diluted earnings per share unless default of the share-lending arrangement occurs, at which time the loaned shares would be included in the basic and diluted earnings-per-share calculation. This ASU is effective for fiscal years beginning on or after December 15, 2009, and interim periods within those fiscal years for arrangements outstanding as of the beginning of those fiscal years. The adoption of this ASU will not have a material impact on the Company's consolidated financial statements.

In August 2009, the FASB issued an ASU regarding measuring liabilities at fair value. This ASU provides additional guidance clarifying the measurement of liabilities at fair value in circumstances in which a quoted price in an active market for the identical liability is not available; under those circumstances, a reporting entity is required to measure fair value using one or more of valuation techniques, as defined. This ASU is effective for the first reporting period, including interim periods, beginning after the issuance of this ASU. The adoption of this ASU did not have a material impact on the Company's consolidated financial statements.

On July 1, 2009, the Company adopted ASU No. 2009-01, "Topic 105 - Generally Accepted Accounting Principles - amendments based on Statement of Financial Accounting Standards No. 168, The FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles" ("ASU No. 2009-01"). ASU No. 2009-01 re-defines authoritative GAAP for nongovernmental entities to be only comprised of the FASB Accounting Standards Codification ("Codification") and, for SEC registrants, guidance issued by the SEC. The Codification is a reorganization and compilation of all then-existing authoritative GAAP for nongovernmental entities, except for guidance issued by the SEC. The Codification is amended to effect non-SEC changes to authoritative GAAP. Adoption of ASU No. 2009-01 only changed the referencing convention of GAAP in Notes to the Consolidated Financial Statements.

In May 2009, the FASB issued SFAS 165, "Subsequent Events" ("SFAS 165") codified in FASB ASC Topic 855-10-05, which provides guidance to establish general standards of accounting for and disclosures of events that occur after the balance sheet date but before financial statements are issued or are available to be issued. SFAS 165 also requires entities to evaluate the subsequent events through the date the financial statements are issued. SFAS 165 is effective for interim and annual periods ending after June 15, 2009, and accordingly, the Company adopted this pronouncement during the second quarter of 2009. The Company evaluated subsequent events through the date that the financial statements were issued.

In April 2009, the FASB issued FSP No. SFAS 107-1 and APB 28-1, "Interim Disclosures about Fair Value of Financial Instruments," which is codified in FASB ASC Topic 825-10-50. This FSP essentially expands the disclosure about fair value of financial instruments that were previously required only annually to also be required for interim period reporting. In addition, the FSP requires certain additional disclosures regarding the methods and significant

assumptions used to estimate the fair value of financial instruments. These additional disclosures are required beginning with the quarter ending June 30, 2009. This FSP had no material impact on the Company's financial position, results of operations or cash flows.

In April 2009, the FASB issued FSP No. FAS 115-2 and FAS 124-2, "Recognition and Presentation of Other-Than-Temporary Impairments," which is codified in FASB ASC Topic 320-10. This FSP modifies the requirements for recognizing other-than-temporarily impaired debt securities and changes the existing impairment model for such securities. The FSP also requires additional disclosures for both annual and interim periods with respect to both debt and equity securities. Under the FSP, impairment of debt securities will be considered other-than-temporary if an entity (1) intends to sell the security, (2) more likely than not will be required to sell the security before recovering its cost, or (3) does not expect to recover the security's entire amortized cost basis (even if the entity does not intend to sell). The FSP further indicates that, depending on which of the above factor(s) causes the impairment to be considered other-than-temporary, (1) the entire shortfall of the security's fair value versus its amortized cost basis or (2) only the credit loss portion would be recognized in earnings while the remaining shortfall (if any) would be recorded in other comprehensive income. FSP 115-2 requires entities to initially apply the provisions of the standard to previously other-than-temporarily impaired debt securities existing as of the date of initial adoption by making a cumulative-effect adjustment to the opening balance of retained earnings in the period of adoption. The cumulative-effect adjustment potentially reclassifies the noncredit portion of a previously other-than-temporarily impaired debt security held as of the date of initial adoption from retained earnings to accumulate other comprehensive income. The Company adopted FSP No. SFAS 115-2 and SFAS 124-2 beginning April 1, 2009. This FSP had no material impact on the Company's financial position, results of operations or cash flows.

In April 2009, the FASB issued FSP No. SFAS 157-4, “Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly” (“FSP No. SFAS 157-4”). FSP No. SFAS 157-4, which is codified in FASB ASC Topics 820-10-35-51 and 820-10-50-2, provides additional guidance for estimating fair value and emphasizes that even if there has been a significant decrease in the volume and level of activity for the asset or liability and regardless of the valuation technique(s) used, the objective of a fair value measurement remains the same. The Company adopted FSP No. SFAS 157-4 beginning April 1, 2009. This FSP had no material impact on the Company’s financial position, results of operations or cash flows.

FASB ASC 820-10 establishes a framework for measuring fair value and expands disclosures about fair value measurements. The changes to current practice resulting from the application of this standard relate to the definition of fair value, the methods used to measure fair value, and the expanded disclosures about fair value measurements. This standard is effective for fiscal years beginning after November 15, 2007; however, it provides a one-year deferral of the effective date for non-financial assets and non-financial liabilities, except those that are recognized or disclosed in the financial statements at fair value at least annually. The Company adopted this standard for financial assets and financial liabilities and nonfinancial assets and nonfinancial liabilities disclosed or recognized at fair value on a recurring basis (at least annually) as of June 10, 2009. The adoption of this standard did not have a material impact on its financial statements.

FASB ASC 820-10 provides additional guidance for Fair Value Measurements when the volume and level of activity for the asset or liability has significantly decreased. This standard is effective for interim and annual reporting periods ending after June 15, 2009. The adoption of this standard did not have a material effect on its financial statements.

FASB ASC 805 establishes principles and requirements for how an acquirer recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed, any noncontrolling interest in the acquiree and the goodwill acquired. This standard also establishes disclosure requirements to enable the evaluation of the nature and financial effects of the business combination. This standard was adopted by the Company beginning June 10, 2009, and will change the accounting for business combinations on a prospective basis.

FASB ASC 350-30 and 275-10 amend the factors that should be considered in developing renewal or extension assumptions used to determine the useful life of a recognized intangible asset. This standard is effective for financial statements issued for fiscal years beginning after December 15, 2008, and interim periods within those fiscal years. Early adoption is prohibited. The adoption of this standard did not have any impact on the Company’s financial statements.

FASB ASC 825-10 requires disclosures about the fair value of financial instruments for interim reporting periods. This standard is effective for interim reporting periods ending after June 15, 2009. The adoption of this standard did not have a material impact on the Company’s financial statements.

FASB ASC 320-10 amends the other-than-temporary impairment guidance for debt and equity securities. This standard is effective for interim and annual reporting periods ending after June 15, 2009. The adoption of this standard did not have a material effect on its financial statements.

As of December 31, 2009, the FASB has issued ASU through No. 2009-17. None of the ASUs has had an impact on the Company’s financial statements.

Off-Balance Sheet Arrangements

We have not entered into any other financial guarantees or other commitments to guarantee the payment obligations of any third parties. We have not entered into any derivative contracts indexed to our shares and classified as stockholder's equity or not reflected in our consolidated financial statements. Furthermore, we do not have any retained or contingent interest in assets transferred to an unconsolidated entity that serves as credit, liquidity or market risk support to such entity. We do not have any variable interest in any unconsolidated entity that provides financing, liquidity, market risk or credit support to us or engages in leasing, hedging or research and development services with us.

Contractual Obligations

On June 2, 2009, the Company borrowed \$1,398,931 and \$809,907 from two Credit Unions. Both of the loans bore interest of 10.459% with maturity dates on May 26, 2010. These loans were not subject to any covenants and were paid in full in August 2010.

On December 31, 2009, the Company borrowed \$957,163 and \$73,629 from two Credit Unions. Both of the loans bore interest of 9.558% with maturity dates on May 26, 2010. These loans were not subject to any covenants and were paid in full in August 2010.

All the above loans were collateralized by the Company's land use right, one of its buildings and other long-lived assets.

In February and March 2010, the Company borrowed \$5,565,156 from a bank. The short term loan bore interest of 4.425%. On March 18, 2010, the Company repaid the loan. This loan was collateralized by one of the Company's buildings and its land use right.

On May 27, 2010, the Company borrowed \$387,997 with interest of 5.346% from a bank. The maturity date is November 24, 2010. The loan is collateralized by raw material inventory and the personal guarantee of the Company's CEO together with a third party's guarantee.

On September 13, 2010, the Company borrowed \$1,716,136, \$895,375 and \$969,990 from three different Credit Unions, respectively. All of the loans bore interest of 7.2% with maturity dates on September 12, 2011. These loans were collateralized by one of the Company's buildings and its land use right.

OUR BUSINESS

Our Company

We are a manufacturer of structural towers for megawatt-class wind turbines as well as other highly engineered clean technology metal components in the PRC. We currently design, manufacture, test and sell structural towers for 1MW and 1.5MW on-land and 3MW off-shore wind turbines and have the expertise and manufacturing capability to provide towers for larger MW on-land and off-shore turbines as they become more prevalent in China. We are currently the only certified wind tower manufacturer within Tieling, Liaoning Province, which provides significant competitive advantage in supplying towers into the wind-rich northern provinces of China. We also manufacture patented, specialty metal products that require advanced manufacturing and engineering capabilities, including bellows expansion joints and connecting bend pipes used for waste heat recycling in steel production and in ultra-high-voltage electricity transmission grids, as well as industrial pressure vessels. Our products provide clean technology solutions for China's increasing energy demand and environmental issues.

We sell our products exclusively in the domestic market. Our current wind tower customers include two of China's five largest state-owned utilities, which are among the top wind farm operators in China as measured by installed wind capacity. We produce wind towers, a component of wind turbine installations, but do not compete with wind turbine manufacturers. Our patented specialty metal products are used by large-scale industrial companies involved mainly in the steel and coke, petrochemical, high-voltage electricity transmission and thermoelectric industries, which are actively seeking ways to reduce their carbon pollutant emissions.

We were founded in September 2007 and have since experienced significant growth. For the nine month period ending September 30, 2010, our net revenue was \$14.7 million, a 440% increase over the twelve month period ended December 31, 2009, and we generated a 29% gross margin and a 20% net margin. Sales of our wind tower products are increasing rapidly; we have shipped 137 wind towers, including towers for 3MW off-shore wind turbines, since their recent introduction in February 2010. Wind towers accounted for over 90% of our revenue for the nine month period ending September 30, 2010.

Notwithstanding the large increase in revenues, our agreements with our customers may result in delayed payments and revenue recognition. Our agreements generally provide that 30% of the purchase price is due upon the placement of an order, 30% upon reaching certain milestones in the manufacturing process and 30% upon customer acceptance of the product, with payment of the final 10% of the purchase price due up to 24 months from the customer acceptance date. Sales revenue, including the final 10% of the purchase price, is recognized only after our products are delivered to, and thoroughly tested and accepted by, our customers. We may experience payment delays from time to time of up to six months from the due date, but we fully expect to receive all payments based on the contracted terms despite any customer delays in payment because the majority of our customers are large, well-capitalized state-owned and publicly traded utility and industrial companies with stable operations.

We believe our rapid growth will continue to benefit from the following competitive strengths:

- § Strong customer relationships with leading utility, wind and industrial companies
- § Geographical proximity to the multi-gigawatt pipeline of wind development projects in the northern provinces of China
- § Technically-advanced, precision manufacturing expertise demonstrated, in part, by our Class III A2 pressure vessel manufacturing license, a key criteria in customer selection of wind tower suppliers
- § Proprietary product designs and intellectual property
- § Excellent reputation for high-quality manufacturing, stringent testing, timely delivery and customer service

Our Company is headquartered in Tieling, Liaoning Province, China where we currently operate two production facilities with approximately 16,120 square meters of combined production space and an annual production capacity of up to 600 wind tower units. As of October 2010, we had 175 full time employees.

Our History

We operate through two wholly owned subsidiaries organized under the laws of the PRC— Creative Bellows and Creative Wind Power. Creative Bellows, which was incorporated on September 17, 2007, is our WFOE and it owns 100% of Creative Wind Power, which was incorporated on May 26, 2009. Creative Bellows produces bellows expansion joints, pressure vessels and other fabricated metal specialty products. Creative Wind Power markets and sells wind towers designed and manufactured by Creative Bellows, which provides the production expertise, employees and facilities for wind tower production.

We were incorporated in the State of Nevada on May 9, 2006, under the name Everton Capital Corporation as an exploration stage company with no revenues and no operations and engaged in the search for mineral deposits or reserves. On June 18, 2010, we changed our name to CleanTech Innovations, Inc. and authorized an 8-for-1 forward split of our common stock effective July 2, 2010. Prior to the forward split, we had 5,501,000 shares of our common stock outstanding, and, after giving effect to the forward split, we had 44,008,000 shares of our common stock outstanding. We authorized the forward stock split to provide a sufficient number of shares to accommodate the trading of our common stock in the OTC marketplace after the acquisition of Creative Bellows as described below.

The acquisition of Creative Bellows' ordinary shares was accomplished pursuant to the terms of a Share Exchange Agreement and Plan of Reorganization, dated July 2, 2010, by and between Creative Bellows and the Company. Pursuant to the Share Exchange Agreement, we acquired from Creative Bellows all of its equity interests in exchange for the issuance of 15,122,000 shares of our common stock to the shareholders of Creative Bellows. Concurrent with the closing of the transactions contemplated by the Share Exchange Agreement and as a condition thereof, we entered into an agreement with Mr. Jonathan Woo, our former Chief Executive Officer and Director, pursuant to which he returned 40,000,000 shares of our common stock to us for cancellation. Mr. Woo received compensation of \$40,000 from us for the cancellation of his shares of our common stock. Upon completion of the foregoing Share Exchange transactions, we had 19,130,000 shares of common stock issued and outstanding. For accounting purposes, the Share Exchange transaction was treated as a reverse acquisition and recapitalization of Creative Bellows because, prior to the transaction, the Company was a non-operating public shell and, subsequent to the transaction, the Creative Bellows' shareholders beneficially owned a majority of the outstanding common stock of the Company and will exercise significant influence over the operating and financial policies of the consolidated entity.

Our principal offices are located at C District, Maoshan Industry Park, Tieling Economic Development Zone, Tieling, Liaoning Province, China 112616. Our phone number is (86) 0410-6129922 and our website address is www.ctiproduct.com. The information contained on our website is not a part of this prospectus.

Our Industry

Overview

Power generating capacity in China increased from 443GW in 2004 to 874GW in 2009, according to the China Electricity Council. Currently, China's energy infrastructure is reliant predominantly on coal; however, China has limited fossil fuel reserves. As a result, China's government has implemented social, economic, environmental, regulatory and government stimulus-related policies to drive demand for technologies that promote renewable energy production, pollution reduction and energy conservation. As identified in its 10th and 11th Five-Year Plans, China has placed a priority on renewable energy, diversification of the power supply and sustainable economic and social development. Simultaneously, China's government is fostering pollution reduction policies to limit carbon dioxide, wastewater discharge and other pollutant emissions while continuing to grow domestic steel production and coal-based power capacity.

China adopted its first Renewable Energy Law in 2005, fostering the development of renewable energy such as wind power. In 2007, the National Development and Reform Commission ("NDRC") released its "Medium and Long-Term Development Plan for Renewable Energy in China" ("2007 NDRC Plan") setting a 15% target for renewable energy consumption by 2020. The growth in wind-generated electricity will also contribute towards China's goal to cut its carbon dioxide emissions per unit of GDP by 40% to 45% by 2020 compared to 2005 levels, as announced in China's "Carbon Intensity Goal" in November 2009; as according to the U.S. Department of Energy, a standard 1.5 megawatt ("MW") wind turbine – the most common in China – can displace 2,700 metric tons of carbon dioxide. These clear government policies are intended to help stimulate sustainable wind power and clean technology development and investment. We believe these government policies will continue to increase demand for our products, including structural wind towers and clean technology fabricated metal specialty components.

Global Wind Power Market

Wind power is the world's fastest-growing energy sector. We believe wind power is cost efficient and mature compared to other types of renewable energy technologies and is an important component of the world's energy infrastructure, representing approximately 2% of global electricity production. According to the GWEC 2010 Global Wind Outlook, global installed wind capacity grew at a 27.8% CAGR from 2000 through 2009. In 2009, according to the GWEC 2009 Global Wind Report, global installed wind capacity grew at a record 31.8%, adding 38.3GW and bringing total installed wind capacity to 158.5GW. The growth in 2009 was led by China and the United States, with China accounting for 36% of all newly installed capacity and 16% of all worldwide capacity, according to the WWEA 2009 Wind Report. This resulted in China adding more wind capacity in 2009 than any other country for the first time and finishing the year with the second-greatest installed capacity behind the United States. The WWEA expects the global market for wind energy to grow at a 25.3% CAGR through 2020, according to the WWEA 2009 Wind Report, reaching 1,900GW in total installed capacity. Further, wind energy is projected to represent up to 12% of global electricity production by 2020, according to the GWEC 2010 Global Wind Report. China is expected to remain a key driver of global wind growth for the foreseeable future. The following table illustrates global annual installed capacity additions and cumulative installed capacity.

Year	Global Annual Installed Capacity Additions	Global Cumulative	Annual Growth (%)
------	--	----------------------	-------------------------

	(MW)	Installed Capacity (MW)	
2009	38,343	158,505	31.8
2008	26,029	120,297	28.2
2007	19,865	93,835	26.7
2006	15,245	74,052	25.3
2005	11,531	59,091	24.1
2004	8,207	47,620	20.8
2003	8,133	39,431	26.8
2002	7,270	31,100	30.1
2001	6,500	23,900	37.4
2000	3,760	17,400	27.9

China Wind Power Market

China currently represents the world's largest market for wind products. In 2009, China installed over one-third of global wind installations, according to the GWEC 2009 Global Wind Report, and became the second-largest wind producing country by cumulative installed wind capacity. According to the WWEA 2009 Wind Report, installed wind capacity within China grew at a 61.5% CAGR from 2000 through 2009 – more than double the overall global rate – and capacity has more than doubled for the past four consecutive years. In 2009, according to the GWEC 2010 China Wind Outlook, the China wind market grew 114.7%, adding 10,129 wind turbines or 13.8GW of new capacity and bringing total installed wind capacity to 25.8GW. According to the GWEC 2009 Global Wind Report, China will add 20GW of wind capacity annually through 2014 and the domestic wind market will reach 200-250GW in installed capacity by 2020. We believe it costs approximately \$1 billion to install 1GW of wind capacity in China, thereby resulting in capital investments of approximately \$200-\$250 billion by 2020. The following table illustrates China's annual installed capacity additions and cumulative installed capacity.

Year	China Annual Installed Capacity Additions (MW)	China Cumulative Installed Capacity (MW)	Annual Growth (%)
2009	13,803	25,805	114.7
2008	6,153	12,020	103.4
2007	3,311	5,910	127.4
2006	1,288	2,599	106.3
2005	507	1,260	64.9
2004	197	764	34.7
2003	98	567	20.9
2002	66	469	16.7

2001	53	402	16.2
2000	73	346	15.3

Source: GWEC 2009 Global Wind Report

According to the second and third wind resources census conducted by the China Meteorological Administration (“CMA”) at a height of 10 meters, the amount of theoretically-exploitable on-land and off-shore wind resources in China was 3,226GW and 4,350GW, and the amount of technically-exploitable on-land and off-shore wind resources was 253GW and 297GW. Overall, studies such as these highlight the substantial potential for wind power in China. However, resources are widely distributed with rich resources concentrated in the three northern (northeast, north, and northwest), southeast coastal and inland regions. The most abundant wind resources in northern China include the regions of Inner Mongolia, Gansu, Xinjiang, Hebei, Jilin, Liaoning, Heilongjiang and Ningxia. According to the Zenith 2009 Wind Analysis, approximately 80% of all wind resources in China exist within the nine northern provinces of China, five of which are located within 500 miles of our manufacturing facilities. The following table illustrates the cumulative wind power grid-connected capacity for the provinces with the most abundant wind resources.

Regions	2009 Cumulative Wind Power Grid-Connected Capacity (MW)	2009 Cumulative Wind Power Grid-Connected Capacity (%)
Inner Mongolia *	9,196.2	35.6
Hebei *	2,788.1	10.8
Liaoning *	2,425.3	9.4
Jilin *	2,063.9	8.0
Heilongjiang *	1,659.8	6.4
Shandong	1,219.1	4.7
Gansu	1,188.0	4.6
Jiangsu	1,096.8	4.3
Xinjiang	1,002.6	3.9
Ningxia	682.2	2.6
Guangdong	569.3	2.2
Fujian	567.3	2.2
Shanxi	320.5	1.2
Zhejiang	234.2	0.9
Hainan	196.2	0.8
Other Regions	595.3	2.3

* Neighboring province to CleanTech’s manufacturing facilities

Current guidelines published in the 2007 NDRC Plan mandate that renewable resources, including wind, generate 10% of total energy consumption by 2010 and 15% by 2020. A major part of China's commitment to achieving these targets involves the creation of a 138GW Wind Base program, which aims to build seven GW-scale wind power bases within six provinces by 2020, each with at least 10GW of capacity, according to the GWEC 2009 Global Wind Report. Planned wind power bases in Hebei, Western Jilin and Inner Mongolia represent over 30GW of new capacity located near our manufacturing facilities. The planning and development for the program is well underway and as of 2009, 83 projects representing 14.3GW had been planned, according to the GWEC 2009 Global Wind Report. The following map illustrates the electricity delivery plan from the main wind power bases in China.

facilities

Wind Power Development in China

In 2009, there were approximately 330 wind project developers in China, twenty of which had newly-installed capacity of more than 100MW, according to the Chinese Renewable Energy Industries Association ("CREIA"). However, the five largest state-owned utilities have significant impact on the development of wind power resources in China, accounting for more than 58% of newly installed capacity in 2009, according to the GWEC 2010 China Wind Outlook. Our customers currently include two of these five utilities, China Guodian Corporation and China Huaneng Group, which represented approximately 31% of newly installed capacity in 2009. The following table illustrates domestic wind development market share among the largest operators.

Companies	2009 Newly Installed Capacity (MW)	Percentage of 2009 Newly Installed Capacity (%)
China Guodian Corporation *	2,600.4	18.8
China Datang Corporation	1,739.8	12.6
China Huaneng Group *	1,644.8	11.9
China Huadian Corporation	1,230.0	8.9
China Guangdong Nuclear Power Holding Co., Ltd.	854.5	6.2
Beijing Energy Investment Holding Co., Ltd.	757.5	5.5
Shenhua Group Corporation Limited	590.3	4.3
China Energy Conservation & Environmental Protection Group	400.3	2.9
China Power Investment Corporation	386.1	2.8
China Resources Power Holdings Co., Ltd.	309.8	2.2

* Current CleanTech customers

Wind Tower Market Opportunity in China

According to the Danish Wind Industry Association, wind towers account for approximately 20% of the total cost for a wind turbine installation. Based on the GWEC's estimate of 200-250GW of installed capacity by 2020 and our total cost estimate of \$1 billion per GW in China, we believe the total domestic market for wind towers could represent \$40-\$50 billion by 2020. Within 500 miles of our manufacturing facilities, where we believe we have significant competitive advantages, we estimate that approximately 130GW of total exploitable capacity exists, based on the Zenith 2009 Wind Analysis. In addition, the NDRC planned the construction of over 30GW of specific Wind Base projects located near our facilities by 2020. Assuming an average selling price of approximately \$70,000 per MW, based upon our delivered towers, this represents a total addressable market of \$9.1 billion in our current region alone and \$2.1 billion for specific Wind Base projects by 2020.

Renewable Energy Policy and Regulation in China

National renewable energy policies and a supportive regulatory framework have driven the growth of renewable energy in China. Several initiatives mandated by China's Renewable Energy Law, first adopted in 2005, such as feed-in tariffs, aggressive targets for renewable energy, priority dispatch and mandatory purchase for wind power, favorable taxation and abolishment of the 70% local content requirement have established the foundation for the rapid development of wind power. Below, we outline key supporting policies.

§ Feed-in tariffs: In 2009, China replaced its centrally controlled bidding pricing system with a wind feed-in tariff ranging from RMB0.51/KWh to RMB0.61/kWh, according to four wind resource zones, representing a significant premium to coal power.

§ Aggressive targets for renewable energy: The 2007 NDRC Plan sets forth a renewable energy consumption target, including energy generated by wind, of at least 15% of China's energy supply by 2020. Further, the 2007 NDRC Plan sets forth an obligation for larger power-generating companies to have 3% of non-hydro renewable energy in the total power generation mix by 2010 and 8% by 2020.

§ Priority dispatch and mandatory purchase: Grid operators must give priority to electricity generated from renewable energy projects in their grid areas and must provide grid-connection services and related technical support. The law also requires grid operators to purchase power from qualified wind farms and institute clear and transparent pricing policies of wind-produced electricity intended to provide wind farm operators a more predictable rate of return.

§ Favorable taxation: Wind farms are exempt from income tax for three years and receive a 50% reduction in such tax for three years thereafter. In addition, electricity generated from wind power is subject to a VAT rate of 8.5%, and wind power equipment, such as wind towers, is subject to a VAT rate of 17%. The corporate income tax rate is reduced to 15% from 25% for wind companies, if they belong to the category of advanced and new technology enterprises supported by the PRC government.

§ Abolishment of the 70% local content requirement: The 70% local content requirement first introduced in 2004 when most wind turbines in China were imported was abolished in 2009. This has both increased competitiveness as well as helped to propel China as the world's largest wind market.

At the end of 2009, China made a political commitment to the international community at the Copenhagen Conference on climate change that non-fossil energy would satisfy 15% of the country's energy demand by 2020. This "Carbon Intensity Goal" has become a binding target for short-term and medium-term national social and economic planning, together with a subsequently formulated target to reduce carbon dioxide emissions. This goal will require an unprecedented boost to the scale and pace of future renewable energy development, including continued support for

wind power development.

China Market for Bellows Expansion Joints and Pressure Vessels

The growing demand for energy has increased alongside China's booming economy, created in part by fiscal stimulus policies to foster industrialization, infrastructure projects and domestic manufacturing. China is the world's largest producer of coal chemicals, producing 353 million tons of coke in 2009, according to the NDRC. China is also currently the world's largest steel producer, producing 568 million tons in 2009, an increase of 13.5% over 2008, according to China's National Bureau of Statistics. According to the Zenith 2009 Wind Analysis, the steel industry contributes 15% of the total carbon emissions in China. According to the U.S. Department of Energy, the largest single environmental issue with steel production is the carburizing of coal into coke for use in iron production. As a result of concerns about pollution and energy recycling, especially in the electric utility, iron and steel industries, China is taking steps to implement more modern production processes designed to improve safety, reduce emissions and conserve energy. In addition, in 2010, China's Ministry of Industry and Information Technology ("MIIT") announced a mandate for China's steel industry to promote energy efficiency and emission reductions.

The NDRC has encouraged the iron and steel industries to utilize a widely adopted energy saving process used in the production of iron, called Coke Dry Quenching (“CDQ”), to promote energy conservation, reduce pollution and expand steel industry production. The CDQ process cools coke in an enclosed heat exchange system, which reduces harmful emissions and wastewater runoff while reclaiming energy for hot water or electricity generation, versus the conventional process using water to drench the coke. In addition, China’s MIIT mandated a consolidation of the iron and steel industries in order to reduce the number of small, inefficient iron and steel mills that do not have the resources to adapt to the new policies encouraging efficiency and pollution reduction. Bellows expansion joints are key components in the CDQ process, a prevalent technology used by the steel industries in Japan, Taiwan, Germany, Brazil and Finland. The primary markets for CDQ high temperature bellows expansion joints are new iron and steel mills in the domestic market, existing mills being modernized and regular CDQ replacement, which we estimate have useful life expectancies of approximately two years. Connecting bend pipes, another type of expansion joint, are used in piping systems to carry gas away from coke ovens used in iron and steel mills. Connecting bend pipes are safer than rigid expansion joints and are also easier to install and replace than rigid metal pipe expansion joints, thereby reducing the cost of maintaining systems, which need replacement approximately every two years. The primary market for connecting bend pipes are iron and steel mills in the process of being modernized and upgraded for safety.

China is also in the process of upgrading its electricity grid to ultra-high-voltage transmission systems, which allow for a more efficient transportation of electricity and a reduction in energy lost during transmission over long distances. The upgrading of the grid is tied directly to the growth in renewables, especially wind power, in order to deliver electricity more efficiently from distant generation locations to population load centers. The State Grid Corp of China plans to spend over \$44 billion by 2012 on these new power lines. Disk spring sleeve bellows expansion joints are used in ultra-high-voltage Gas Insulated Switchgear (“GIS”) to reduce safety issues caused by conventional bellows used in GIS by better accommodating the unique gas pressure movements within the switchgear. GIS are key safety devices in these ultra-high-voltage transmission systems. GIS work as a circuit breaker to isolate electrical equipment and balance electrical loads. The primary market for disk spring sleeve bellows expansion joints is provincial and municipal power companies that are upgrading their transmission systems.

A pressure vessel is a container designed to hold liquid or gas at significantly higher or lower pressures than at normal sea level. Pressure vessels must be carefully designed, manufactured and operated properly in order to avoid serious explosions. The engineering specifications for pressure vessels are heavily regulated and vary from country to country. Pressure vessels may be made of steel or carbon composite materials. Spherical pressure vessels require forged parts constructed from high quality steel and welded together using highly sophisticated welding techniques.

According to the Zero Power Intelligence Co. “China Bellows Industry Investment Analyst and Research Report 2010,” the aggregate market for bellows expansion joints in China was approximately \$3.0 billion in 2009 with an expected annual growth rate of approximately 10%. The market for pressure vessels was approximately \$6.6 billion in 2009 with an expected annual growth rate of approximately 25% over the next 5 years, according to the Zero Power Intelligence Co. “China Metal Pressure Vessel Investment Analyst and Research Report 2010.”

Products

Each of our product lines – wind towers, bellows expansion joints and pressure vessels – are highly engineered clean technology metal components purchased by major electrical utilities and large-scale industrial companies to support renewable energy production, pollution reduction and energy conservation in China. The manufacturing process for each of our products consists principally of the rolling and welding of raw steel materials into finished components and makes use of the same pool of production workers and engineering talent for design, fabrication, assembly and testing. Our products are characterized and marketed by their ability to withstand temperature, pressure, structural load and other environmental factors critical to their performance in the wind power, steel and coke production, petrochemical, high voltage electricity transmission and thermoelectric industries. Our sales force sells our products

directly to our customers, who are responsible for installing and integrating our component products into their finished products. We perform all manufacturing at our facilities in Tieling, Liaoning Province, China.

Wind Towers

We design and manufacture structural towers for wind turbines. A typical wind turbine installation consists of a tower; nacelle, which houses the generator, gearbox and control systems; and the blade and rotor system. A free standing, utility-scale wind tower is composed of rolled steel sections that we design and fabricate for sale to our customers who, in turn, assemble and install the tower at wind farm sites.

Wind turbine installation Subsection of wind tower in production
(Source: the Company)

We produce our wind towers in multiple subsections, which we then weld and bolt together into four main sections and the tower base for transport to the customer’s project site. After inspecting and treating the steel, we produce each tower subsection by rolling steel and then welding the rolled form together along its vertical axis to produce the final cylindrical piece. Each tower is machined to customer specifications and precise tolerances based on tower height, wind turbine size and unique installation site requirements. The height of the wind tower impacts the ultimate yield of the turbine, as taller towers generally provide access to stronger winds and greater wind flow. This leads to greater power output and also helps to enable the use of larger MW turbines. Increasing the height of the tower generally requires increasing its base diameter and wall thickness, thereby increasing the amount of raw material needed for production. We construct our towers using high quality materials capable of enduring high-cycle fatigue stress cycles and they are designed to exceed the entire expected life of the wind turbine, typically 20 years.

We currently produce towers for 1MW and 1.5MW on-land wind turbines and 3MW off-shore wind turbines, with the expertise and manufacturing capability to provide wind towers for larger MW on-land and off-shore wind turbines as they become more prevalent in China. We have the capacity to manufacture 600 wind tower units per year and we plan to expand operations and continue to develop towers for the next generations of wind farms in China. The following table illustrates the general dimensions of wind towers for on-land and off-shore installations by turbine MW.

Turbine Capacity	Wind Tower Sizes					
	1MW	On-land Wind Turbines			Off-shore Wind Turbines	
		1.5MW	3MW	5MW	3MW	5MW
Tower Height	68m	72m
