MAGIC SOFTWARE BUILDS FOR THE FUTURE WITH MAJOR INTEGRATION
SOFTWARE GRANT TO PENN STATE UNIVERSITY

USING THE IBOLT INTEGRATION PLATFORM, PENN STATE INFORMATION SCIENCE AND
TECHNOLOGY STUDENTS WILL LEARN ABOUT BUSINESS CRITICAL INTEGRATION TECHNOLOGY

OR YEHUDA, ISRAEL, OCTOBER 15, 2007 - Magic Software Enterprises (NASDAQ: MGIC),
a leader in enterprise application development, deployment and integration
technology, announced today that it has awarded a major grant of its iBOLT(TM)
and eDeveloper(TM) software to Penn State University, one of the ten largest and
most prestigious universities in the United States, to be used on more than 120

Edgar Filing: MAGIC SOFTWARE ENTERPRISES LTD - Form 6-K

servers for courses beginning with the fall semester 2007.

Penn State students will have access to the Magic iBOLT business integration product in courses designed to show how disparate computer software can work together, integrating business processes in today's most effective business environments. iBOLT will also help Penn State University students learn to solve common business systems problems, such as duplicate data entry, lack of information, and cumbersome interfaces that frustrate many business professionals today. The iBOLT integration suite from Magic Software falls into a category of software known as business process management (BPM) and is commonly used for enterprise application integration (EAI).

"One of the most important areas of information technology today is the integration of disparate data and information from a wide variety of sources," said Dr. Alan Peslak, a computer scientist at Penn State who has conducted research into the economic and societal impact of information technology. "To allow students to understand technology that can ease integration issues, iBOLT software from Magic Software will be used as an integration platform. Students will develop and deploy business process integration solutions utilizing the iBOLT Business Integration Suite to focus on comprehensive organizational solutions. In this way our IST students will learn some of the most sought after skills for IT professionals. iBOLT is planned to enhance our IST Integration and Application Option," concluded Dr. Peslak.

The Magic iBOLT Integration Suite is an intuitive and easy to use a product that includes a visually oriented design studio. Within this environment students can drag and drop business objects to an integration flow and then drill-down to configure those objects in a manner consistent with desired business rules. The major types of business applications that require integration include Enterprise Resource Planning (ERP), Customer Relationship Management (CRM), and Supply Chain Management (SCM) software.

"We are honored to award one of the ten largest and most prestigious universities in the United States a software grant that will enable them to teach students the principles of smoothly integrated business software without the need for programming," said Eitan Naor, CEO of Magic Software. Part of our corporate policy is to ensure that the next generation business users will have the knowledge of, and experience with, such business critical technology. "Penn State University joins a number of prestigious organizations worldwide, such as the United Nations, Allstate, UPS, and thousands of others who use our software to develop and integrate business applications. Our partnerships with other major software companies such as IBM, Oracle and SAP have provided us with a vast base of experience upon which to base our integration technologies."

ABOUT MAGIC SOFTWARE ENTERPRISES

Magic Software Enterprises (NASDAQ: MGIC) has been a leader in enterprise application development, deployment and integration technology for more than two decades. The company's service-oriented (SOA) platforms are used by companies worldwide to develop, maintain, and deploy both legacy and new business solutions, while integrating these applications across both internal and external, heterogeneous environments. Magic Software's platform-independent methodology lets companies achieve agility by quickly assembling composite applications, allowing programmers to create services and architects and business analysts to orchestrate and reuse these services to enable business processes. Through partnerships with industry leaders such as IBM and SAP and more than 2500 ISVs worldwide, Magic Software technology is used by more than 1.5 million customers around the globe.
