DISCLAIMER
FORWARD-LOOKING STATEMENTS; STATEMENT OF SENECA CAPITAL BELIEFS; FORECASTS
This
presentation
contains
statements,

including
Seneca
Capital s
beliefs
as
to
valuation,
which
are
forward
looking
statements
about
future
events
and
sets
forth
a
presentation
of
our
beliefs.

The
forward-looking
statements
are
not
guarantees
of
future
performance,
and
we
caution
you
not
to
rely
unduly
on
them.

You
should
be
aware
that
any
forward-

looking statements are based on certain assumptions and subject to risks and uncertainties that exist in the business

environment
that
could
render
actual
outcomes
and
results
that
are
materially
different.

We
have
based
many
of
these
forward-looking statements on our beliefs, expectations and assumptions about future events that may prove to be inaccurate. While we consider these beliefs, expectations and assumptions to be reasonable, they are inherently subject to significant business, economic, competitive, regulatory and other risks, contingencies and uncertainties, most of which are difficult to anticipate and many of which are beyond our control.

We
caution
you
that
the
forward-looking
statements
are inherently uncertain and necessarily involve risks that may affect Dynegy Inc.'s (Dynegy) business prospects and performance, causing actual results to differ from those discussed

or
presented
in
this
presentation.

Without
limiting
the

generality of the foregoing, Seneca Capital's beliefs as to future value are based on a variety of assumptions as to the future that Seneca Capital believes constitute a reasonable, potential valuation scenario that could develop within the next several years for Dynegy but which are nonetheless subject to risks and uncertainties that exist in the business environment that could render actual outcomes and results materially different than anticipated. Seneca Capital's beliefs as to current value are based on a variety of assumptions, including as to the future, that Seneca Capital believes constitute reasonable assumptions but which are nonetheless subject to risks and uncertainties that exist in the business environment that could render actual outcomes and results that are materially different.

THIRD-PARTY INFORMATION

This presentation is based on, and contains references to, third-party sources of information. Under-
performance

AND SERIAL ATTEMPTS TO SELL WITHOUT
A CAREFUL STANDALONE REVIEW

6

Blackstone Transaction #1 (Aug. 12, 2010 @ \$4.50 per share)

Cash deal at 1/3 of replacement cost at low point in the cycle after sharp and anomalous
stock price underperformance

Granted exclusive rights to 1/3 of Dynegy assets

\$50mm / \$16mm break-up fees and Blackstone right to match
Blackstone Transaction #2 (Nov. 16, 2010 @ \$5.00 per share)

Virtually
unprecedented

Recess
of
shareholder

meeting

Additional \$16mm break-up fee in the face of defeat of transaction

Only 26% voted in favor of sale at \$5.00 per share

Post-Blackstone

(Nov.

23,

2010

Dec.

15,

2010)

Poison pill to freeze top shareholders

Abandoned promise to carefully review its standalone restructuring alternatives

Icahn Enterprises Transaction (Dec. 15, 2010 @ \$5.50 per share)

Rushed to sell company for low price (deferred due diligence to post-signing)

Yet another \$16mm break-up fee

Gained pledge of largest holder (IEP) not to support pending consent solicitation for directors

Willing

to

spend

more

than

\$100mm

(15%

of

equity

value)

to

sell

the

company

(1)

(1)

Includes (a) \$16.3 mm break-up fee + \$10 mm expense reimbursement per the Proposed Blackstone Merger, plus (b) \$23 mm per the proposed IEP Merger, plus (d) \$36 mm change of control arrangements.

A DIFFERENCE IN ALIGNMENT
DRIVES A DIFFERENCE OF OPINION
VALUE

-

Seller at \$4.50/\$5.00/\$5.50 per share
(\$0.90/\$1.00/\$1.10 pre-reverse split)

-

Bought nearly 30% of stock in August
09 from LS Power at \$9.65 per share

-

12% economic interest in Dynegy
(9.3% voting stock)

-

Only motivation is increasing
shareholder
value

fully

A BIG 4

ACCOUNTING FIRM

SEES FURTHER COST CUTTING

Seneca retained a Big Four accounting / consulting firm to analyze the potential cost cutting opportunity at Dynegy (Big 4 Report)

Utilized various benchmarking techniques and publicly available information on Dynegy and industry peers in a Top Down

analysis (see appendix for fuller description of methodology)

Big

4

Report

identified

between

\$82mm

and

\$157mm

of

incremental

cost

cutting

potential starting from 9/30/10

financials (12 months ending 9/30/10)

Big

4

Report

states

that

this

implies

an

additional

\$16mm

\$103mm

of

cost

savings

potential

on top of the cost structure

that Dynegy utilized in their proxy forecast; applying a 6x multiple yields ~\$1 -

\$5/share potential value from incremental cost

cutting

Although the

Big 4

accounting firm

consented to the inclusion of

a

plain paper

report in

this presentation (please see

appendix for further information), the

Big 4

firm would not consent to the use of its name in

this

presentation or as part of

its

plain paper

report.

Investors should

consider

this when evaluating the analysis.

10

Cost Reductions Could Provide Meaningful Value to Dynegy Equity

(\$ in millions)

~\$1-

\$5 / Share

Potential Value

From Addl.

Cost Cutting

(1)

Includes O&M Expense and SG&A Expense for the 12 months ending 9/30/10.

Dynegy's capital structure provides very significant flexibility, with limited secured debt and ample liquidity options. Unsecured debt has minimal covenant protections:

No limitation on asset sales

No limitation on restricted payments

No limitation on debt or lien incurrence

No change of control provisions

Facing this flexibility and lack of protections, Dynegy's unsecured debt trades in the market at a substantial discount to its face value:

of environmental rules

Q2

2011

MISO

Capacity:

MISO

is

likely

to

file

detailed

plans

for

a

PJM-style

capacity

auction with FERC providing an important mechanism to measure EPA rule impacts

16

Given forward dark spreads, we expect that up to 10GW of older/inefficient coal capacity should be retired before the '14/'15 without accounting for EPA-driven retirements

-

Angie Storzynski, Macquarie 1/10/11

We

continue

to

predict

roughly

25,000

MWs

in

PJM

will

have

to

choose
between
investing
in
environmental
equipment
or
retiring

[Modeling
assumptions
include]

Coal
units
under
400MWs
with
no
scrubber
installed
will
be
retired.

Also,
early
vintage
scrubbers
(built
prior
to 1985)

will not comply with upcoming EPA regulation.

We assume coal plant retirements from upcoming EPA rules; CATR and HAPS MACT will be phased in over a 3-year time period with a 15% effect in the May 2011 auction, a 50% effect in the May 2012 auction, and a 100% effect in the May 2013 auction.

-
Brian Chin, Citi
Investment Research 1/18/11

MISO
will
likely
file
for
a
capacity
auction
at
FERC
in
2Q,
with
an
auction

in
early
13
for
the
13/ 14
delivery
period
At
MISO,
we
primarily
discussed the likelihood and timeframe for implementation of a formal capacity auction. While vertically integrated regulated utilities are
relatively averse to the idea, MISO's
initiative to develop a capacity auction stems from recent deliverability requirements demanded by FERC. As a
consequence,
MISO
has
indicated
to
FERC
that
it
intends
to
make
a
formal
tariff
filing
for
a
capacity
auction
by
2Q11.
The
first
auction
is
anticipated
to
take
place
in
early
2013,
for
delivery
in

the
2013/2014
delivery
year
(June
1st
2013

May
31st
2014).

-
Julien
Dumoulin-Smith, UBS 12/23/10 (After a December trip that included a meeting with MISO)

Disclaimer:

Seneca

Capital s

beliefs

regarding

current

and

future

value

are

based

upon

assumptions,

including

as

to

the

future,

that

Seneca

Capital

believes

to

be

reasonable,

however,

substantial

risks

and

uncertainties

exist

such that actual performance may deviate materially from Seneca Capital s forecasts (see page 2 for full disclaimer).

MARKET PARTICIPANTS HAVE
BEGUN TO TAKE NOTICE

If shareholders reject the BX revised offer, we believe a newly composed board and new management will likely take a rational, long-term and creative approach to breaking up the company (potentially taking several years) and realize a value closer to our \$9 per share break-apart value.

-

Charles Fishman, Pritchard Capital Partners, 11/17/10

18

Icahn's recent proposal to refinance DYN's credit facilities under amended terms should assuage concerns over the liquidity impact of asset sales/maintenance covenants. Seneca also recently proposed an additional four new board members,

all
of
whom
have
highly
relevant
backgrounds,
including

a
former
senior
rail
executive

We
have
incorporated

DYN's latest disclosures into our projections, adjusting our EBITDA outlook and increasing our cash flow burn through 15 to \$2.3 Bn. In contrast, DYN's sizeable operational and financial leverage could push equity value to \$12/sh on a power recovery and debt restructuring to mrkt value.

-

Julien Dumoulin-Smith, UBS 11/16/10

I believe that, even at \$5.00 per share, the proposed Blackstone acquisition undervalues Dynegy. Today's \$.50 per share

increase,
coming
only
one
day
after
Blackstone
stated

that
the
\$4.50
price
is

a
full
and
fair
valuation
reassures

my
belief that the Dynegy/Blackstone transaction leaves too much shareholder value on the table for Blackstone. I have also considered that in a November 15, 2010 report JP Morgan stated that it is introducing a December 2011 price target of \$7, up from our prior December price target of \$5.00.

-
Carl Icahn, 11/16/10 (In a statement filed with the SEC on a Schedule 13D/A)

REJECTING THE TENDER IS THE
ENABLING EVENT

Do not tender your shares for \$5.50 / share

WRONG PRICE at the WRONG TIME for the WRONG REASONS

We believe Dynegy is worth \$7.50 -

\$8.50 per share today and \$18-\$20 per share

in a recovery valuation -

trading at less than 1/3 of its replacement value

Board rushed to sell the company BEFORE conducting promised careful standalone review

\$36mm management change of control severance payments and a Board that

has purchased only 16,000 shares creates misalignment with shareholders

Dynegy is the premier vehicle to participate in a power market recovery with substantial value creation levers independent of commodity prices

Industry leading leverage to EPA-driven retirements (validated by Ventyx model)

Positive asymmetric exposure to natural gas

Flexible debt structure reflected in ~\$7/sh market value discount of debt

Accounting Firm validated cost cutting potential

19

Defeat of Tender Can Enable Investors to Participate in Dynegy Value Creation

Disclaimer: Seneca Capital's beliefs regarding current and future value are based upon assumptions, including as to the future risks and uncertainties exist such that actual performance may deviate materially from Seneca Capital's forecasts (see page 2 of

Accounting Report.

APPENDIX
20

EPA CLEAN AIR RULES CAN
CHANGE MARKET DYNAMICS

Upcoming EPA rules may force coal generators to either invest in expensive control technologies or shut down

Stringent Maximum Achievable Control Technology (MACT) Rules could require compliance as early as 2014

Environmental controls can be expensive and unlikely for many plants if

the current power price environment persists

(1)

Pursuant to the Midwest Consent Decree, Dynegy will have spent \$730 mm (out of a total of \$960 mm) of environmental capital expenditures for the Midwest fleet by the end of 2010 and will have substantially completed its environmental capital expenditure program by 2013.

**EPA RULES: HAZARDOUS AIR
POLLUTANT HAPS/MACT**

The Clean Air Act requires the EPA to develop an emission control program for hazardous pollutants, including mercury and acid gases

The EPA is mandated pursuant to consent decree to draft a proposed Maximum Achievable Control Technology (HAPS/MACT) rule as soon as March 16, 2011 and to finalize it as soon as November 16, 2011

HAPS/MACT rule will apply to all existing and future coal and oil fired capacity
HAPS/MACT requires achieving emissions levels as good as the average of the
top 12% of existing representative sources

Credit Suisse estimates that for mercury emissions, this could require a 90% removal
rate

Affected plants would have 3 years to comply (i.e., 2014 or 2015), assuming no
case by case waivers or an exemption granted by the President

In

a

more

moderate

scenario,

the

EPA

could

propose

different

sets

of

standards

based on sub-categories, such as:

Size

Boiler pressure / temperature

Coal mix

No trading between plants

22

CREDIT SUISSE MID-CASE FOR
COAL PLANT RETIRMENTS

According to Credit Suisse, 66% of the coal capacity in the US have NOT installed (or announced plans to install)

both
scrubbers
and
SCRs
and
30%
have

no
environmental
controls at all

Smaller coal plants are less likely to invest in environmental controls as the capital cost is significantly

higher
on

a
\$

/

kw
basis.

More
than

50

GW

of
small

coal
plants

have

no

environmental controls installed

Credit Suisse base case assumes that 60GW of coal capacity will be retired including all units below 300MW without any pollution control equipment

Q2 10

ACCOUNTING FIRM COST
STUDY

An Accounting Firm study analyzed Dynegy's public data to determine a baseline level of costs, for which they utilized Dynegy's LTM financial results as of Sept. 30, 2010

O&M Costs

SG&A Costs

Cost of sales / fuel procurement

Analyzed public disclosures of selected relevant public comparable companies to determine industry benchmarks for each cost category

GenOn, NRG Energy, Calpine, Constellation, AES and Public Service Enterprise Group

Compared Dynegy results to comparable company benchmarks in order to determine where cost savings

would

be

possible

within

Dynegy

relative

to

its

baseline

cost

level

in

a

base

case

and

in

a

stretch case

Reviewed financial forecasts from Dynegy's preliminary proxy statement (January 10, 2011) to determine cost levels assumed by management, including cost savings plans already announced and being implemented by management

Used gross margin less Adjusted EBITDA as a proxy for SG&A + O&M

costs

Compared baseline level of costs and total savings potential to 2012-2015 forecast period and 2013-2015 forecast period costs to determine incremental savings potential for Dynegy for 2011+

\$16 mm of potential incremental savings in base case

\$103 mm of potential incremental savings in stretch case

25

VENTYX POWER ANALYSIS

Ventyx (Energy Velocity) calculated a dynamic plant-by-plant fundamental production cost model based on their Fall Reference Case that integrates commodity price assumptions, resource additions and retirements

Load forecast based on utility filings

Build-out of all known and reasonably foreseeable transmission projects

Renewable additions to meet existing state standards

MISO and PJM capacity payments reach Cost of New Entry assumptions when reserve margins drop below 15%

Coal and transportation costs are based on Ventyx Coal Sub-Module that utilizes a least cost algorithm that includes variable cost of coal producers and different modes of transport

Natural gas prices based upon NYMEX strip as of January 5, 2011

Plant-level assumptions for heat rates, capacity factors and O&M are based on

Ventyx's Energy Velocity database (based on FERC data where available)

Applied Credit Suisse Mid-Case

(1)

(60GW of retirements) MACT retirement assumptions

Retirement of coal fired units smaller than 300MW without environmental controls

Compliance with all other existing environmental legislation (CATR, RGGI, EPA Tailoring Rule, etc.)

VENTYX BIOGRAPHY

Ventyx is a business solutions provider offering software, data and advisory services to energy, utility, communications, and other asset-intensive commercial industries. Ventyx was formed in 2007 by the merger of MDSI and Indus International and the acquisition of Global Energy Decisions and New Energy Associates during that same year. Each of these companies traces their roots to the 1970 s and have been providing clients in the energy sector with energy

planning, decision support, energy trading and operations solutions. In 2010 Ventyx was purchased by ABB, a global leader in power and automation technologies.

The Ventyx Advisory Services Practice, which performed part of the analysis in this presentation, traces its roots to the legacy Global Energy Decisions and New Energy Associates companies. The keystone product of the Ventyx Advisors Practice is the Ventyx Reference Case which is a semi-annual forecast of North American power and fuel markets. The Ventyx reference case is utilized by utilities, power generators, investment bankers and market regulators as an independent view of the current and expected state of power and fuel markets. Over the lifetime of this product offering the Ventyx reference case has become widely recognized with a large subscriber base.

Assumes that DYN captures 18% of the spark spread improvement in 2012+ due to requirement to purchase carbon credits.

ACCOUNTING COST STUDY

33

DRAFT
Project Delta
Comparator Analysis of Dynegy
January 2011
ADVISORY
DRAFT
35

DRAFT

Project Delta

Our findings suggest that further cost reduction and operational efficiency may be possible at Dynegy

Key findings

Supporting evidence

Observations

The current financial performance of Dynegy places it at the median of its peer group

For the 12 months ending September 2010, Dynegy has reported an EBITDA margin of 23% versus a peer group median of 23%. For the comparator group chosen, the range was between 18% and 32%

Given the limited amount of time and access to information, it is difficult to assess Dynegy's potential to achieve upper quartile

performance. Additional investigation and diligence is required
Additional cost savings
and operational
efficiencies
have
been
announced and are
expected to be delivered
between now and 2013
In August 2009, a multi-year cost reduction program was
announced that was expected to deliver cumulative
savings of \$400m to \$450m between 2010 and 2013
the identified savings include \$70m to \$85m of
operating costs including an annualized \$30m to \$40m
of O&M and \$40m to \$45m of G&A
an
additional
\$25m
to
\$30m
of
capex
avoidance
was
also included in the announcement
As part of the proxy filing in December 2010, an
incremental \$50m of savings was identified through
operational efficiencies and G&A reduction
To reach the cumulative \$400m to \$450m target, most of the
projected run-rate savings would have to be in-place in 2010
There appears to be a concerted effort to reduce G&A expense as
evidenced by the 10% decline, on average, per year since 2007
Updates to investors have reinforced that the program is on-track
but have not provided additional details
It is unclear if the incremental savings in the proxy filing is based on
pushing the current initiatives further or if new ideas and initiatives
have been developed
The current savings program has not been evaluated for delivery risk
It is possible that a
further \$16m to \$103m of
cost
savings
and
operational
improvements could be
possible, however further
validation is required
The current cost savings do not specifically mention
opportunities in the cost of sales line, which may include
transportation and distribution opportunities

When compared to historical cost levels and comparator organizations, further upside may be possible in the O&M and G&A lines, beyond what has already been included in the business plan forecasts

Given the limited amount of time and access to information, it is difficult to ascertain how much further operational improvement may be possible in this business and further validation and diligence is required

The largest component of the incremental savings identified is in the O&M line. The savings may not be entirely possible given the plant upgrades and new emissions equipment

No consideration has been given to timing or implementation cost at this time

The asset efficiency of the organization lags the peer group and should be investigated further to understand the drivers and assess what upside may be possible

Dynegy's asset efficiency (EBITDA / Assets) is at 5% and currently 4th quartile for the peer group. For the comparator group chosen, the range was between 5% and 14%

Given the limited amount of time and access to information, it was not possible to identify the specific causes for this performance.

Further investigation is required

34

36

DRAFT

Project Delta

We have identified an incremental \$16m to \$103m of potential savings, above and beyond what may be included in the current forecasts

Methodology and Assumptions

The total potential for each of the P&L lines was determined using the 12 month period ending September 2010 as the baseline. Costs by type were compared with historic levels and against comparator organizations.

The level of planned operating expense (O&M and G&A) going forward was estimated using the difference between gross margin and adjusted EBITDA from the proxy filing dated 10 January 2011.

(1)

The total savings potential was then compared to the published forecasts (10 January 2011 proxy filing) to understand if additional opportunity exists, above and beyond what is included in the current business plans.

Notes:

(1) Adjusted EBITDA includes interest income and other adjustments related to mark-to-market changes, and therefore may not be an accurate representation of the planned O&M and G&A of the business going forward.

DRAFT

Project Delta

We have developed a set of hypotheses that could be refined and tested through our structured approach

Procurement

A more strategic approach to direct and indirect procurement, including centralizing the procurement function across Dynegy, may reduce costs across the organization

H1

Maintenance

and

Operations

Improvements to the maintenance and operations strategy and practices, including

a

shift

to

more
preventative
maintenance,
and
improved
scheduling,
planning and prioritizing of work could reduce O&M costs in the organization

H2

Equipment

Effectiveness

Targeted investments and a more effective maintenance program may
improve

the

OEE

of

the

plants,

resulting

in

improved

utilization

and

availability,

leading to reduced cost and improved profit

H3

Capital

Expenditures

A more rigorous approach to capex
approval and project governance could
reduce capex

levels

H4

Inventory /

Spare Parts

A

better

controlled

procurement

process

and

a

well

defined

spare

parts

strategy could reduce operating expense and release working capital through
spare parts reduction

H5

Support

Functions

Driving efficiency across the support functions through centralization,
outsourcing
and
the
use
of
self-service
models
could
reduce
G&A
costs
in
the business
H6

Should you wish to
proceed to Phase II, we
have identified a
preliminary list of
areas that you may
want to consider for
further analysis and
investigation

38

DRAFT

Project Delta

Summary of previously announced cost saving programs

Current cost improvement
initiatives

Additional detail

Observations

In July 2009, Dynegy reported
that a cumulative \$400m to
\$450m of operating
efficiencies could be achieved
between 2010 and 2013 with
annual run-rates between
\$95m and \$110m

(1)

Dynegy announced an extensive, multi-year program to

eliminate costs throughout the company. Cumulative savings, relative to Dynegy's original plan, are expected to be \$400m to \$450m over a four-year period beginning in 2010

Annual savings are expected to be generated through the following means:

reduced capital expenditures, with a targeted range of \$25m to \$30m in savings per year;

reduced operational expenditures, with a targeted range of \$30m to \$40m in savings per year; and

reduced general and administrative expenditures, with a targeted range of \$40m to \$45m in savings per year

It does not appear that there have been additional updates with respect to the timing, areas of focus or progress towards targets aside from the comments in the quarterly investor updates indicating that the program is on-track

If the savings are based on a 2009 baseline, this represents an EBITDA improvement of approximately 3 points from 23% to 26% of sales
approximately 25% reduction in SG&A expense
approximately 7% reduction in O&M expense

Reduction in capex

is grouped in with the operating

cost improvements, however direct P&L impact is not expected

As part of the proxy

statement released on

January 10, 2011 from

Dynegy to its shareholders,

an additional \$50m of annual

cost savings may be possible,

beginning in 2011 and

incremental to the previously

announced targets

(2)

Implementation of a cost savings program focused on reducing general, administrative and operational expenses generates approximately \$50m in annual cost savings beginning in 2011.

Implementation has not yet commenced and would be incremental to the cost savings targets included in the Company's previously announced 2010-2013 cost savings program

No further detail is provided as to where these cost savings will come from or the cost and risk associated with achieving this level of savings

DRAFT
Methodology and Assumptions
To
estimate
the
planned
level
of
operating
expense
(O&M
and
G&A)
going
forward,

the

projected gross margin of the business was compared to the projected Adjusted EBITDA using the forecasts found in the 10 January 2011 proxy filing it is important to note that there is a difference between the \$702m of estimated operating expense found using this method for 2010E and the LTM baseline (\$631m) used to calculate the potential savings of \$71m (10%). This could be due to the impacts of interest income, mark-to-market changes or changes in the operating cost base of the business and should be investigated further Once the expected level of operating expense was determined for each of the forecast periods, it was assumed that 2013 and beyond could be used to understand the planned level of operating expense once all of the current cost reduction programs were completed

this analysis will only identify the net forecast change in estimated operating expense which will include both increases due to increasing costs of goods and services and cost reduction efforts that may be planned and delivered as part of the announced programs and further efforts by management

Project Delta

Analysis of proxy filing

Notes:

(1) Adjusted EBITDA includes interest income and other adjustments related to mark-to-market changes, and therefore may not be an accurate representation of the planned O&M and G&A of the business going forward

proxy statements relating to merger or acquisition, DPREM 14A, 10 January 2011 page 59 ; Analysis

Recommended next steps

Validate the actual planned levels of O&M and G&A in the business plan going forward

and compare these

to the actual 2010 results to determine what level of cost reduction may be planned

Review the assumptions and operating initiatives that were used to develop the plans to understand the robustness of those plans and assumptions

Understand and model the impact of off-setting items including normalizing for changes in revenue, inflation, changes in the asset base or other known items that could impact the required level of operating expense

Company

Commentary

GenOn

Energy

We assume US\$100m in cost savings in 2011 rising to US\$200m in 2012 (more than management's guidance of US\$150m)

the

companies

eliminate

some

overheads

and

optimize

coal
and
power
hedges.

Macquarie
Equities
Research,
Dec.
2010

We believe GEN will exceed announced annual cost savings of \$150MM. We believe this estimate is conservative and will be

achieved
early
in
2011.

We
expect
additional
annual
savings
of
\$100-\$150MM.

RBC
Capital
Markets,
Dec.
2010

Both companies also expect overhead cost savings to result from consolidations in several areas, including headquarters, IT

systems
and
corporate
functions
such
as
accounting,
human
resources
and
finance.

ISS
Proxy
Advisory,
Oct.
2010

Stockholders of both companies (Mirant & RRI Energy) will benefit from significant value creation driven by expected annual

savings
of
\$150

million.
These
costs
savings
will
come
from
reductions
in
corporate
overhead
and
will
be
realized
fully
starting
in
January 2012.

EBITDA.

Included

in

this

estimate

are

the

transaction cost savings associated with being able to cross generation and load (around \$30m of margin from bypassing the

bid/ask

spread

and

from

collateral

savings).

Morgan
Stanley
Research,
Oct.
2010
Calpine
Corporation

Calpine's strategy of keeping its focus on natural gas-fired generation has served the company well. By doing so, Calpine has been able to avoid the need for costly environmental upgrades.

Oppenheimer,
Dec.
2010

Operating costs are expected to decline in 2012 as the major maintenance cycle is completed. Thereafter, we expect costs to be about flat as a result of the company's cost management efforts.

Wunderlich
Securities,
Dec.
2010
Constellation
Energy Group

Constellation Energy must be nimble and agile, able and willing to change based upon market dynamics or a sweeping policy pronouncement. Over the course of the next 12 to 24 months, we intend to deploy up to \$1 billion of the cash proceeds from the EDF joint venture toward asset acquisitions in

areas
where
we
supply
a
large
volume
of
power.

GlobalData,
July
2010
AES
Corporation

AES is currently transitioning from a crisis period to disciplined growth. Key future drivers are organic growth, acquisitions, deleveraging, enhanced operational synergies and cost cutting.

RBC
Capital
Markets,
Nov.
2010

Potential for positive earnings revisions in the future. We believe the combination of cost reductions and/or accretive acquisitions could cause upward revisions to our 2011-2012 estimates.

Our recent conversations with management suggest the possibility of \$75-100 million (\$0.06-\$0.08/share,

after-tax)
of
corporate
overhead
reductions
that
are
not
currently
in
our
estimates
