The Chair then made the said Opinion on Valuation of the Stockholders Equity of Capim Branco Energia S.A. available to the meeting, and stated that the original would be attached to these Minutes as an integral part thereof. This proposal was put to debate, and subsequently to a vote, and was approved unanimously.

The Chair pointed out that in the minutes of the Extraordinary General Meeting of Stockholders held on January 22, 2015 the name of the Board Member Helvécio Miranda Magalhães Junior had been spelt incorrectly, but however his description in that document was complete and correct.

There being no further business, the Chair opened the meeting to the floor, and since no-one wished to make any statement, ordered the meeting suspended for the time necessary for production of the minutes. The session being reopened, the Chair, after putting the said minutes to debate and to the vote and verifying that they had been approved and signed, closed the meeting.

For the record, I, Anamaria Pugedo Frade Barros, Secretary, wrote these minutes and sign them together with all those present.

From the CEO and CFO

Our CEO, Mr. Mauro Borges Lemos, comments:

This year of 2014 was a very significant one in Cemig's recent history, due to the severe challenges imposed by the hydrological situation, which has become increasingly adverse in recent years. We continue to focus on our objective of growing in a solid and sustainable manner, as expressed in our mission statement to operate in the energy sector with profitability, quality and social responsibility and of consolidating Cemig's market leadership position in the Brazilian electricity sector. Our management model has shown itself to be efficient. Among the factors that allow us to reach this conclusion is the fact that our strategic partners have opted to remain present with us, in the controlling stockholding block of Taesa. We cannot omit to mention the great skills of our technical and management teams, who have brilliantly conducted the process of capture of synergy between the companies of the group making a vital contribution to maximization of our results.

Our Chief Finance and Investor Relations Officer, Mr. Fabiano Maia, comments as follows:

Although 2014 has been a challenging year, Cemig has succeeded in generating robust cash flow, assured by our diversified portfolio of businesses, and our high levels of operational efficiency. Ebitda, which measures operational cash flow, was R\$ 6.3 billion in the year, or 20.29% more than in 2013. Our solid balance sheet has the capacity to guarantee continuity of our projects in executing the Company's Long-term Strategic Plan, in the new context for both the economy and Brazilian electricity. The good performance of our shares has given our stockholders a return, in the year, that is much greater than both the Bovespa index and the Brazilian electricity sector index.

Table of Contents

The economic context

Key recent features of the international economy have been: consolidation of the United States recovery; weakness of growth in Europe; more signs of slowing growth in China; and recession in Japan.

Due to the strengthening of the US economy and the fall in its unemployment to a six-year low, in December, the Fed withdrew its promise to keep interest rates exceptionally low with its quantitative easing program, and in place of this, said that it would be patient when considering the appropriate time to make its first increase in basic interest rates since 2006.

In 2014 the dollar rose against other currencies. A stronger dollar has three important consequences for the US economy, the markets and policymakers. First, it represses inflation just when the Fed is trying to bring it closer to its target of 2% per year; second, it harms exports and, subsequently, growth; and finally, it makes American assets more attractive to investors, which can heat up markets and hinder regulators' efforts to prevent formation of asset bubbles.

In Europe and Japan, Central Banks may see their objectives of increasing economic growth hindered by a tendency to deflation.

As part of efforts to prevent the Eurozone entering a deflationary spiral, at the end of 2014 there was speculation that the European Central Bank might start a massive program of purchase of securities by the government at the beginning of 2015. The objective would be to put an end to deflation and heat the economy, fostering resumed growth.

The Chinese economy seen as an engine of global growth suffered from cooling of its real estate sector, weakening of domestic demand and a decline in industrial production due to lower exports. In 2014 Chinese GDP grew 7.4% the lowest figure since 1990. In this situation the Chinese Central Bank, in efforts to stimulate growth, carried out programs to inject liquidity into the economy by cutting interest rates. In Japan, there were two quarters of contraction, inaugurating another recession.

2014 will likely be confirmed as the fourth consecutive year in which Brazilian GDP grew by less than the Latin American average: its growth in 2014 was only 0.2%. It was only by a small margin that Brazilian inflation, at 6.41% in 2014, did not exceed the upper limit of the government's inflation target band. The financial market currently expects the Brazilian economy to shrink by 0.5% in 2015 which would be its greatest contraction since 1992 with the highest inflation in 11 years: 7.33%.

Table of Contents

Brazil's nominal deficit more than doubled from 2013 to 2014 – from 3.25% to 6.7% of GDP. The nominal result is the difference between total revenues and total expenses of the public sector, including payment of interest.

Brazil posted a trade deficit of US\$ 3.93 billion in 2014, the highest since 1998. Terms of trade with all the main trading partners weakened, with the notable exception of the US. The government attributed the 2014 balance of payments deficit to three factors: the fall in commodity prices (due to lower growth in China in the year), especially in iron ore; the adverse international situation in general, especially with the effect of the recession in Argentina (reducing Brazilian exports); and a continuing high deficit in international transactions in oil and oil products.

Against the Real, the US dollar appreciated 12.78% in the year. This is the result of factors of the current context, such as: increased uncertainty associated with the elections; the additional fall in the price of commodities; the global appreciation of the dollar; and the increase in aversion to emerging markets risk. The forecasts of an even stronger dollar in 2015 reflect the market's uncertainty on when the Fed will end its expansionist monetary policy. Expectation of an increase in US interest rates causes outflow of investors' capital from Brazil and other countries, further boosting the dollar against other currencies.

2014 was also a critical year for the Brazilian electricity sector: 10 years after the adoption of the current model for the sector, it underwent a crisis of multiple dimension. At the end of the year reservoir levels were at extreme lows, below those that led to rationing in 2001, and prices in the spot market were close to their ceiling.

Electricity consumption in the Brazilian national grid in 2014 was up 2.2% from 2013 – the smallest annual increase since the negative growth of 1.1% in 2009 – when the country was suffering the effects of the international financial crisis. The main reason for this weakness was Brazilian industry being weaker than had been forecast by the industrial sector itself – its electricity consumption was down 3.6% from 2013.

For Brazilian electricity, the stress on the sector produced dramatic economic effect. Continuous operation of the country's thermoelectric plants, with high operational costs – something that had been planned to happen only for short periods – added to the high prices of electricity in the spot market, and destroyed the usual structure of the sector's financial flows. The revenue of the agents in the sector was unable to accompany the explosion of costs. The deficit in remuneration, at a conservative valuation, is already some R\$ 60 billion. The cash shortfall in the distributors has a guarantee of being made good from consumer rate increases, and is being facilitated by interim loans from the CCEE, but the deficit in the generators is not just a passing phenomenon, and at present there is no guaranteed mechanism for replenishing it.

The government is looking at the possibility of charging for renewals of the distribution concessions that begin to expire in June of this year. And the Mining and Energy Minister has decided definitely to impose new quality targets on electricity companies, and to demand a five-year investment plan from them. The aim is to mobilize the sector to increase the efficiency of distribution lines, especially at low voltage. These new targets would be monitored annually, and the companies would be subject to penalties which could even include loss of the concession.

On the New York stock exchange, the volume traded in ADRs for Cemig's preferred shares (CIG) in 2014 was US\$ 35.4 million. We see this as reflecting recognition by the investor market of Cemig as a global investment option.

The São Paulo stock exchange Ibovespa index was down 2.91% in the year, closing December at 50,007 points. This negative performance reflected investors' growing pessimism on the Brazilian economy.

Cemig's shares, however, significantly outperformed the Brazilian stock market's principal index. Our common stock (Cemig ON) was up 19.96% in the year, and our preferred stock was down 15.94%.

- (III) other agents of the electricity sector – traders, generators and independent power producers, also in the ACL;
- (IV) Distributors, in the Regulated Market (*Ambiente de Contratação Regulada*, or ACR); and
- (V) the wholesale trading chamber (*Câmara de Comercialização de Energia Elétrica*, or CCEE) (eliminating transactions between companies of the Cemig Group).

Sales of electricity to final consumers totaled 49,324 GWh, or 8.7% more than in 2013.

Total sales in the Regulated and Free Markets were 14,146 GWh, or 12.3% lower than in 2013.

At the end of December the Cemig Group was billing 8,008,205 clients – or 2.9% more than at the end of December 2013 – of which 8,008,153 were final consumers, and 52 were other agents of the Brazilian electricity sector.

Comments on the various consumer categories:

Residential

The *residential* consumer category accounted for 20.32% of Cemig's electricity sales in 2014, totaling 10,014 GWh this was 5.7% higher than in 2013.

Factors on this figure were:

- a. Addition of 196,587 consumers, or 3.1% growth in the total number of residential consumer units;
- b. Higher temperatures in 2014 than 2013, causing consumers to use and buy more air conditioning and ventilators for their homes;
- c. average monthly consumption per consumer 2.2% higher in 2014, at 131.2 kWh/month, the highest level since 2001.

The *industrial* consumer category accounted for 41.00% of Cemig's electricity sales in 2014, totaling 26,026 GWh in the year this was 10.98% higher than in 2013.

This reflects volume of electricity billed by Cemig GT to free clients 13.7% higher, addition of new clients by Cemig GT, and redirecting of available supply to the Free Market following the termination, in December 2013 of contracts originally made in the Regulated Market.

The *commercial* consumer category accounted for 10.08% of Cemig's electricity sales in 2014, totaling 6,395 GWh in the year – this was 5.97% higher than in 2Q13.

Factors were:

- connection of 10,446 new consumers – a 1.5% increase in the client base;
- climate factors in 2014, with temperatures higher than historic monthly averages, leading the various types of small businesses and service companies to install more air conditioning and similar devices;
- the dynamics of the tertiary sector.

Rural:

Rural consumption was 5.34% of the total of electricity distributed by Cemig, and was 11.94% more in 2014 than 2013. One of the main factors in this increase was lower rainfall at the beginning of the year than the historic average for the rainy season, and higher temperatures over the whole of the year, increasing consumption on irrigation by 16.5%, and other farming activities by 9.7%.

Other categories

Total consumption by the other consumer categories – Public authorities, Public lighting, Public services, and Cemig's own consumption – totaling 5.51% of the total electricity transacted, was 2.8% higher than in 2013.

The electricity market of Cemig D

The concession area of Cemig D (Cemig Distribution – Cemig Distribuição S.A.), approximately 97% of the Brazilian state of Minas Gerais, totals an area of 567,478 km². Cemig D has four electricity concessions in the state, under four separate concession contracts (West, East, South, and North).

Total volume billed to captive clients, plus volume transported for free clients and distributors with access to Cemig D's network totaled 44,459 GWh in 2014, 1.4% less than in 2013. This reflects: (i) 5.3% growth in the captive market, with contributions from the Residential, Commercial and services, and Rural categories; and (ii) 10.3% lower total of energy transported, due to lower consumption by the industrial consumer category.

At the end of December 2014 Cemig D was billing 8,008,085 consumers, or 2.9% more than at the end of 2013. Of this total, 8,007,668 are captive consumers, and 417 are free consumers that use the distribution networks of Cemig D.

The electricity market of Cemig GT

The market of Cemig GT comprises sales made:

(I) in the Free Market (*Ambiente de Contratação Livre* or ACL) to Free Clients, either located in Minas Gerais or in other States; and to other generation companies, traders and independent power producers;

(II) in the Regulated Market (ACR), to distributors; and

(III) through the Electricity Trading Chamber (CCEE).

Cemig GT's market grew by 2.8% in 2014, and its total number of clients billed increased by 22.1% to 520 in December 2014. They comprised: 472 industrial and commercial clients, in Minas Gerais and other states, 36 distribution companies, and 12 companies in the category of traders, generators and independent power producers.

Free clients consumed 21,350 GWh in the year or 54.3% of the total energy provided by Cemig GT, and an increase of 13.6% over 2013 on two main factors:

addition of new clients for Cemig GT, mainly outside the state of Minas Gerais; and

redirection of available power levels from the regulated market to the free market (regulated sales were 54.2% lower), with the termination, in December 2013, of contracts that had been made in the regulated market.

Sale of electricity to other agents in the sector, in the Free Market, totaled 8,530 GWh, which was 105.6% more than in 2013. This reflects Cemig taking advantage of commercial opportunities, which resulted in new contracts in the short-term market.

Sales on the CCEE were 27.4% higher in 2014, due to settlement of a higher volume of available supply from GT than in 2013.

Electricity losses

Control of electricity losses is one of Cemig D's strategic objectives, and the Company has a structure dedicated to this: Its Distribution Losses Measurement and Control Management Unit. Compliance with the objective is monitored monthly using the Distribution Total Losses Index (*Índice de Perdas Totais da Distribuição*, or IPTD), which was 11.00% in 2014, against a regulatory target of 10.48% by the end of 2017. In setting regulatory targets for the third Tariff Review Cycle, Aneel made significant changes in its method for calculating technical losses, imposing limits that are extremely challenging for Cemig D. Total losses comprise technical losses plus non-technical losses (PPTD and PPNT). The forecast result for technical losses in 2014 was 8.81%, for a regulatory target of 7.84 %, and the projected result for non-technical losses was 2.19%, for a regulatory target of 2.64%.

Aneel measures non-technical losses with reference to the low-voltage market. Taking this into account, the result for non-technical losses for the low-voltage market as invoiced in 2014 was 5.74%, for a regulatory target of 7.63% (33% below the limit set by the Regulator).

QUALITY INDICATORS SAIDI AND SAIIFI

Cemig D is continuously taking action to improve operational management, organization of the logistics of its emergency services, and its permanent regime of preventive inspection and maintenance of substations, lines and distribution networks. It also invests in training of its staff for improved qualifications, state-of-the-art technologies and standardizations of work processes, aiming to uphold the quality of electricity supply, and, consequently, maintain the satisfaction of clients and consumers.

The charts below show Cemig's SAIDI (in hours) and SAIFI (in number of outages) for the last 2 years. These results reflect the investments made by the company in preventive maintenance, such as cleaning of power line pathways, tree pruning, replacement of cross-arms, maintenance of structures, replacement of poles, transformers and cables, and other work such as network shielding, and overhaul and interconnection of circuits. Another important initiative is the change of the technological level, with systematic investment in automation of the electricity system, which will enable automatic remote re-establishment of supply after outages.

Consolidated operational revenue

The main factors affecting revenue in 2014 were:

Annual tariff adjustment in Cemig D (Distribution), with average effects on tariffs for captive consumers of 2.99%, effective since April 8, 2013 (full effect in 2014).

Energy invoiced to final consumers 8.66% higher, due to increased demand from residential and commercial consumers.

Tariff increase for Cemig D, with average effect on consumer tariffs of 14.76%, in effect since April 8, 2014.

Volume of electricity billed by Cemig GT to free clients 13.7% higher, reflecting addition of new clients by Cemig GT, and redirecting of available energy from the regulated market to the free market, with the termination of regulated market contracts at the end of December 2013.

Revenue from wholesale supply

Revenue from wholesale supply to other concession holders was R\$ 2,230 million in 2014, compared to R\$ 2,144 million in 2013. Although the volume of electricity sold to other concession holders was 12.28% lower in 2014, at 14,146,109 MWh, compared to 16,127,376 MWh in 2013, revenue was higher because the average price of electricity sold was 20.68% higher, at R\$ 159.16 per MWh in 2014, compared to R\$ 132.94/MWh in 2013. The higher average price is substantially due to the lower level of supply available in 2014, as a result of the lower water levels in the hydroelectric plant reservoirs.

Revenue from Use of Distribution Systems (the TUSD charge)

Cemig D's revenue from the TUSD charge was R\$ 855 million in 2014, a reduction of 15.18% from 2013 (R\$ 1,008 million), resulting from several factors affecting Cemig D: (a) cooling of economic activity in the industrial sector, reducing volume of energy transported by 10.30%; (b) effect of the 33.22% reduction in the TUSD charged to free consumers as from April 8, 2013, and the subsequent effect of its increase by 8.79% from April 8, 2014.

CVA and other financial components

Due to the alteration in the concession contracts of the distributors, Cemig started to recognize balances of non-controllable costs to be passed through to Cemig D's next tariff adjustment, which represented a revenue of R\$ 1,107 million in 2014.

Transmission concession revenue

Revenue from the Transmission concession in 2014 of R\$ 557 million, or 37.77% more than in 2013 (R\$ 404 million). This mainly reflects the higher volume of demand for supply due to the inclusion of new contracts.

Transmission indemnity revenue

For 2014, Cemig reports Indemnity Revenue of R\$ 420 million, which compares with R\$ 21 million in 2013. The higher figure mainly represents recognition of revenue of R\$ 357 million arising from receipt of the Inspection Report (*Relatório de Acompanhamento da Fiscalização*, or RAF), which dealt with indemnity of the transmission assets of Cemig GT (Generation and Transmission).

Operational costs and expenses

Operational costs and expenses, excluding Financial revenue (expenses), totaled R\$ 14,451 million in 2014, compared to R\$ 11,232 million in 2013, an increase of 28.66%.

The following paragraphs comment on the main variations:

Electricity purchased for resale

The expense on electricity purchased for resale in 2014 was R\$ 7,428 million, 42.65% more than the figure of R\$ 5,207 million in 2013. Main factors in the increase:

Cemig D

Involuntary exposure of Cemig D to the spot market in 2014, together with the higher price of electricity in the wholesale market, due to the low levels of the reservoirs of Brazil's hydroelectric plants. As a result the Company had an expense of R\$ 1,127 million in 2014, compared to R\$ 236 million in 2013.

Expense on electricity acquired in auctions 47.76% higher in 2014, at R\$ 3,394 million, compared to R\$ 2,297 million in 2013, arising mainly from availability contracts, due to expenditure on fuel for generation by the thermal plants that were dispatched in their totality in 2014 while in 2013 those with higher costs were shut down as from July.

Expenses on electricity bought from Itaipu Binacional 18.31% lower, at R\$ 830 million in 2014, compared to R\$ 1,016 million in 2013 reflecting among other factors the volume of electricity purchased being 28.74% lower, at 6,255 GWh in 2014, compared to 8,777 GWh in 2013. The effect of this reduction in quantity was partially offset by the appreciation of the dollar against the Real from 2013 to 2014. The average dollar exchange rate applicable to invoices from Itaipu in 2014 was R\$ 2.35/US\$, or 8.80% higher than in 2013 (R\$ 2.16/US\$).

Cemig GT

The expense on electricity purchased for resale in 2014 was R\$ 1,692 million, 36.01% more than the figure of R\$ 1,244 million in 2013. This reflects a volume of electricity purchased for resale 27.77% higher in 2014 (10,313 GWh) compared to 2013 (8,072 GWh), due to higher trading activity.

Operational provisions

Operational provisions were R\$ 581 million in 2014, 90.49% more than in 2013 (R\$ 305 million). The change mainly reflects:

Constitution of a provision for losses of R\$195 million in 2014: R\$ 166 million from the put options of Parati, and R\$ 29 million from the units option contract, signed between Cemig GT and the private pension plan entities.

Employment-law provisions R\$ 71 million higher in 2014 (at R\$ 242 million, vs. R\$ 171 million in 2013) reflecting a higher volume of actions brought by former employees resulting from dismissals in recent years, and the higher volume of actions arguing hazardous employment pay, due to new legal arguments being put forward following recent changes in legislation. The Company also recognized a provision of R\$ 127 million, for the 3% increase in employees' salaries in real terms claimed in a legal proceeding by representatives of the employees under the annual wage negotiation agreement.

Equity gain (loss) in subsidiaries

The total of Equity gains (losses) in subsidiaries in 2014 was a gain of R\$ 210 million, representing 72.44% less than the gain of R\$ 764 million in 2013.

This principally represents the negative equity income of R\$ 348 million in 2014 on the investment in the *Santo Antônio* plant, through Madeira Energia and SAAG Investimentos S.A., related to the following factors: (i) the Generation Scaling Factor (GSF), an adjustment applying to generators; (ii) the Generation Availability Factor (FID); and (iii) a provision for losses on amounts receivable from the consortium building the plant, due to the delay in commercial start-up of generating units.

Financial revenue (expenses)

Cemig reports net financial expenses of R\$ 1,101 million in 2014, or 256.91% more than in 2013 (R\$ 308 million). The following are the main factors:

In 2013 Cemig posted a gain of R\$ 313 million, in Financial revenue, of which R\$ 81 million was recognized as reversal of Pasep and Cofins taxes; and R\$ 232 million as revenue from monetary updating. This arose from final judgment (subject to no further appeal) in favor of Cemig in the court action arguing illegality of Paragraph 1 of Article 3 of Law 9718, of November 27, 1998, which had sought to extend the base for calculation of the Pasep and Cofins taxes, to make them chargeable on Financial revenue and on Other non-operational revenues. The judgment referred to the period 1999 to 2004.

Costs of loans and financings 33.38% higher, at R\$ 931 million in 2014, compared to R\$ 698 million in 2013, mainly due to the higher CDI rate (10.81% in 2014, and 8.05% in 2013), and also to a higher volume of funds raised in 2014.

Recognition of financial expenses of R\$ 239 million, from supplementary monetary updating, arising from the difference between the Selic and IGP M interest rates, applied to the amount of the advances against future capital increase made by the State of Minas Gerais in the preview years.

Income tax and Social Contribution tax

In 2014 Cemig reported income tax and the Social Contribution tax totaling R\$ 1,343 million, on reported pre-tax profit of R\$ 4,479 million, representing a percentage rate of 29.96%. In 2013, Cemig's expense on income tax and the Social Contribution totaled R\$ 950 million, on pre-tax profit of R\$ 4,054 million, a percentage of 23.43%.

Table of Contents**Regulatory assets and liabilities**

On November 25, 2014 Aneel decided to amend the concession contracts of holders of Brazilian electricity distribution concessions, to provide that in the event of cancellation of the concession contract for whatever reason, the remaining balances (assets and liabilities) of any shortfall in payment or reimbursement through the mechanism of the tariff will be taken into account by the concession-granting power for the purposes of indemnity.

As a result, as from signature of the amendment on December 10, 2014, Cemig D started recognizing the balance of the CVA account (the Account for Compensation of Variation in Values of Portion A Items), and of any of the financial components to be included in tariff calculations, accumulated up to that date. The initial recognition was made in financial assets or liabilities, with counterpart in the profit and loss account (Revenue from sale of goods and services).

The Company has financial assets and liabilities arising from this contractual amendment, recognized as from December 2014, as follows:

Table of Contents**EBITDA**

Cemig's consolidated Ebitda in 2014 was 23.05% higher than in 2013:

EBITDA R\$ 000	2014	2013	Change, %
Net profit for the period	3,136,903	3,103,855	1.06
+ Provision for income tax and Social Contribution tax	1,342,507	950,141	41.30
+ Financial revenue (expenses)	1,100,988	308,475	256.91
+ Amortization and depreciation	800,918	823,668	(2.76)
= Ebitda	6,381,316	5,186,139	23.05

Consolidated Ebitda was higher by a significant percentage, of 23.05%, resulting mainly from the increase of R\$ 5 billion in the Company's operational revenue, partially offset by the increase of R\$ 3 billion in operational costs (excluding depreciation and amortization).

The increase of 10.33% in Cemig D's Ebitda in 2014, from 2013, is mainly due to the recognition of regulatory assets and liabilities.

The significant increase of 36.32% in Cemig GT's Ebitda in 2014 mainly reflects the increase of 47.51% in net revenue arising from the greater availability of electricity for settlement in the spot market.

- h) there is urgency in meeting the cash needs of Cemig Distribuição S.A. to honor its operational commitments in the short term, arising, principally, from the following factors:

- i) there is not enough time for the Company to raise funds in the financial market through a debt instrument, for settlement of the obligations specified in the budget;
- j) the most practical alternative for additional entry of funds into Cemig D, for settlement of its obligations specified in the budget, is an increase in its share capital through issuance of nominal common shares without par value, to be subscribed in their entirety by Cemig;
- k) the issue price is R\$ 1.0297 per share, calculated by dividing Stockholders' equity on September 30, 2014 (R\$ 2,329,263,000) by the number of existing shares (2,261,997,787);

 - ii) to approve declarations of vote in the General Meetings of Stockholders, and orientations of vote in the meetings of the boards of directors, of the wholly-owned subsidiaries, subsidiaries, affiliated companies and of the consortia in which this company participates, when they involve ownership in the share capital of other companies or consortia, and such decisions must, in any event and not only in matters relating to ownership of an interest in the capital of other companies or consortia, obey the provisions of these by-laws, the Long-Term Strategic Plan, and the Multi-Year Strategic Implementation Plan, as specified, respectively, in subclauses e and p of Article 17 of the by-laws of Cemig.
- o) under Article 163, III of Law 6404/1976, the Audit Board should give opinion on any proposals by the management bodies that are submitted to the General Meeting of Stockholders in relation to change of the share capital;
