

MECHANICAL TECHNOLOGY INC
Form 10-K
March 31, 2010

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-K

ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934
FOR THE FISCAL YEAR ENDED DECEMBER 31, 2009
OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934
FOR THE TRANSITION PERIOD FROM _____ TO _____

Mechanical Technology, Incorporated
(Exact name of registrant as specified in its charter)

New York
(State or Other Jurisdiction
of Incorporation)

0-6890
(Commission File Number)

14-1462255
(IRS Employer
Identification No.)

431 New Karner Road, Albany, New York 12205
(Address of registrant's principal executive office)

(518) 533-2200
(Registrant's telephone number, including area code)

Securities Registered Pursuant to Section 12(b) of the Act:

Title of each class
None

Name of each exchange on which registered
None

Securities Registered Pursuant to Section 12(g) of the Act: Common Stock
(\$0.01 par value)
Title of Class

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (Section 229.405 of this chapter) is not contained herein, and will not be contained, to the best of the registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definition of "large accelerated filer", "accelerated filer", and "smaller reporting company" in Rule 12b-2 of the Exchange Act (check one):

Large Accelerated Filer Accelerated Filer Non-Accelerated Filer Smaller reporting company

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12B-2 of the Act). Yes o No

The aggregate market value of the voting and non-voting common equity held by non-affiliates as of June 30, 2009 (based on the last sale price of \$0.66 per share for such stock reported on the over-the-counter market for that date) was \$3,090,339. Such value excludes common stock held by executive officers, directors, and 10% or greater stockholders as of June 30, 2009. The identification of 10% or greater stockholders as of June 30, 2009 is based upon Schedule 13G and amended Schedule 13G reports publicly filed before June 30, 2009. This calculation does not reflect a determination that such parties are affiliates for any other purposes.

As of March 24, 2010, the Registrant had 4,771,658 shares of common stock outstanding.

Documents incorporated by reference: Portions of the registrant's Proxy Statement for its 2010 Annual Meeting of Stockholders are incorporated by reference into Part III of this Form 10-K.

PART I

Item 1: Business

Unless the context requires otherwise in this Annual Report, the terms “we”, “us” and “our” refer to Mechanical Technology, Incorporated, “MTI Micro” refers to MTI MicroFuel Cells, Inc., and “MTI Instruments” refers to MTI Instruments, Inc. We have a registered trademark in the United States for “Mobion”. Other trademarks, trade names, and service marks used in this Annual Report are the property of their respective owners.

Mechanical Technology, Incorporated, (“MTI” or the “Company”), a New York corporation, was incorporated in 1961. MTI operates in two segments, the New Energy segment which is conducted through MTI MicroFuel Cells Inc. (“MTI Micro”), a majority-owned subsidiary, and the Test and Measurement Instrumentation segment, which is conducted through MTI Instruments, Inc. (“MTI Instruments”), a wholly-owned subsidiary.

MTI Micro was incorporated in Delaware on March 26, 2001, and is developing Mobion®, a handheld energy-generating device to replace current lithium-ion and similar rechargeable battery systems in many handheld electronic devices for the military and consumer markets. Mobion® handheld generators are based on direct methanol fuel cell (DMFC) technology, which has been recognized as enabling technology for advanced portable power sources by the scientific community and industry analysts. As the need for advancements in portable power increases, MTI Micro is developing Mobion® as a solution for advancing current and future electronic device power needs and addressing the multi-billion dollar portable electronics market. As of December 31, 2009, the Company owned approximately 61.81% of MTI Micro’s outstanding common stock.

MTI Instruments was incorporated in New York on March 8, 2000. MTI Instruments is a worldwide supplier of precision non-contact physical measurement solutions, condition based monitoring systems, portable balance equipment and wafer inspection tools. MTI Instrument’s products use a comprehensive array of technologies to solve complex, real world applications in numerous industries including manufacturing, semiconductor, solar, commercial and military aviation, automotive and data storage. Our products consist of electronic gauging instruments for position, displacement and vibration application within the design, manufacturing/production, test and research market; wafer characterization of semi-insulating and semi-conducting wafers within both the semiconductor and solar industries; and engine vibration analysis systems for both military and commercial aircraft.

The New Energy Segment

MTI Micro is developing and commercializing off-the-grid power solutions for various portable electronic devices. Our patented proprietary direct methanol fuel cell technology platform called Mobion, converts 100% methanol fuel to usable electricity capable of providing continuous power as long as necessary fuel flows are maintained. Our proprietary fuel cell power solution consists of two primary components integrated into an easily manufactured device: the direct methanol fuel cell power engine, which we refer to as our Mobion Chip, and methanol fuel cartridges. Our current Mobion Chip weighs less than one ounce and is small enough to fit in the palm of one’s hand. The methanol used by the technology is fully biodegradable. We have demonstrated power density of over 84 mW/cm², while producing more than 1,800 Wh/kg or 1.4 Wh/cc of fuel from its direct methanol fuel feed. For these reasons, we believe our technology offers a superior power solution compared to current lithium-ion and similar rechargeable battery systems currently used by original equipment manufacturers and branded partners, or OEMs, in many handheld electronic devices, such as smart phones, mobile phone accessories, digital cameras, portable gaming devices, e-readers and other portable devices. We believe our platform will facilitate further developments of numerous electronic product advantages, including smaller size, environmental friendliness, greatly extended run-time of current portable devices, and simplicity of design, all critical for commercialization in the consumer market. We also believe our platform can be implemented as three different product options: a handheld power generator for consumer electronic devices, a snap-on or attached power accessory, or an embedded fuel cell on handheld devices. We have strategic agreements with a global Japanese consumer electronics company, with a U.S. based developer and marketer of universal chargers, with a global power tool manufacturer and a letter of intent with Duracell, part of the Procter & Gamble Company. Our goal is to become the leading provider of portable power for various types of electronic devices and, assuming available financing, we intend to commercialize Mobion products in 2010.

Our Mobion technology is protected by a patent portfolio that includes 54 patents and 57 U.S. patent applications covering five key technologies and manufacturing areas, one of which is the process that eliminates the need for active water recirculation pumps or the inclusion of water as a fuel dilutant. The water required for the electrochemical process is transferred internally within the Mobion Chip from the site of water generation on the air-side of the cell. This internal flow of water takes place without the need for any pumps, complicated re-circulation loops or other micro-plumbing tools.

Industry Background

Technological advances in semiconductor manufacturing, LED displays, memory costs and availability, wireless technologies, and software applications have resulted in a dramatic increase in the number of portable electronic devices, their usage, and especially, their power requirements. In addition, there are a number of new handheld electronic devices, such as smart phones, mobile phone accessories, digital cameras, portable gaming devices, e-readers and other portable devices that have been introduced into the market. Consumer demand for these portable electronics that offer an enhanced experience include the ability to communicate any time, anywhere and have effectively enabled the creation of an “always-on” environment independent of the consumer’s location. This trend towards increased functionality in portable electronic devices has led to a “power gap” in which the disparity between a device’s power supply, typically a rechargeable lithium-ion battery, and its power need, is growing. This power gap leads to a need for the end user to plug in their devices to the electrical grid more frequently, which limits their mobility of using these electronic devices where and when the need arises.

Improvements in rechargeable battery technology have not kept pace with the evolution of consumer electronic device performance. Over the last ten years, device performance as measured by silicon processor speed has increased by a factor of 128 times, while the energy density of lithium-ion technology has only doubled. We believe that further gains in lithium-ion technology for portable electronics will be incremental at best, as any achievable benefits may be outweighed by the decreasing stability, availability, integrity, and relative safety of these higher energy output batteries. In addition to their performance shortfalls, lithium-ion battery technology poses an environmental risk as the various heavy metals incorporated in these batteries require special disposal to prevent contamination of waste disposal sites.

According to a report dated May 2009 by Freedonia Group, Inc., an independent research firm, commercial demand for fuel cell systems, which totaled 17,800 units in 2008, will expand exponentially through 2013, when unit sales will reach 1.3 million, and then climb another sevenfold to 9.95 million units in 2018. Although market gains are projected to be strong for most applications, virtually all of this increase will be attributable to an increase in portable fuel cell systems demand, which is expected to account for 98 percent of all unit sales in 2018.

OEMs are actively seeking improved power sources to replace existing rechargeable lithium-ion batteries to keep up with the additional technology improvements to their mobile electronic devices. The development of new products using technologies that already exist, such as radio frequency, touch screen technologies, camera functionality, increase in processor speeds and 4G wireless capabilities, is being slowed down on mobile devices due to the unavailability of portable, compact, economical and rechargeable/replaceable higher energy density, including micro fuel cells.

Our Solution

At the core of our solution is our proprietary Mobion Chip engine, a design architecture that embodies a reduction in the size, complexity, and cost of fuel cell construction, which results in a reliable, manufacturable, and affordable power solution that we believe provides higher energy density and portability over competing rechargeable battery technologies. Our proprietary fuel cell power solution consists of two primary components integrated in an easily manufactured device: the direct methanol fuel cell power engine, which we refer to as our Mobion Chip, and methanol replacement cartridges. Our Mobion Chip weighs less than one ounce and is small enough to fit in the palm of one’s hand. For these reasons, we believe that our Mobion platform is ideally suited to provide a replacement for rechargeable lithium-ion batteries. Based upon our ability to provide a compact, efficient, clean, safe, and long-lasting power source for lower power applications, we intend to initially target power solutions for applications such as universal handheld power generators, power tools, remote sensors, smart phones, mobile phone accessories, digital cameras, portable gaming devices, e-readers and other portable devices.

For handheld consumer electronic applications, we have demonstrated power density of over 84mW/cm² with energy efficiencies of 1.4 Wh/cc of fuel, which is a direct result of our Mobion platform’s ability to use 100% methanol – a widely available, environmentally friendly, inexpensive, and biodegradable fuel. These advantages result in higher energy density and reduced size, cost, and complexity of our power solution offering consumers portable on-demand power, independence from power outlets, and freedom from the need to constantly recharge their devices.

Our Strategy

Our goal is to become a leading provider of portable power for handheld electronic devices. Key elements of the MTI Micro strategy designed to achieve this objective include the following:

Business Focus. We are focusing our efforts on the development and commercialization of our portable power source products. Our fuel cell boasts of a flexible architecture that is applicable to various kinds of electronic devices. We continue to partner with different OEM’s that will co-develop the integration of Mobion to their devices.

Design for Mass Manufacturing. Our portable power source products will be manufactured using standard processes, such as injection molding and automated test and assembly, which are broadly employed throughout the electronics manufacturing industry. In preparing Mobion for commercialization, our current Mobion Chip is designed for mass manufacturing. In addition, we have continued integrating more functionality into our Mobion Chip while reducing its part count to one piece. Our current Mobion Chip is small enough to fit in the palm of a hand.

Outsource Manufacturing. We plan to outsource manufacturing of our products to allow us to expand rapidly and diversify our production capacity. This strategy will allow us to maintain a variable cost model in which we do not incur most of our manufacturing costs until our proprietary fuel cell power solution has been shipped and billed to our customers. We intend to concentrate on our core competencies of research and development and product design. This approach should reduce our fixed capital expenditures and allow us to efficiently scale production.

Utilize our Technology to Provide Compelling Products. We plan to utilize our intellectual property portfolio and technological expertise to develop and offer portable power source products across multiple electronic device markets. We intend to employ our technological expertise to reduce the overall size and weight of our portable power source products while increasing their ease of manufacturing, power capacity, and power duration and decreasing their cost. We believe that these efforts will enable us to meet customer expectations and to achieve our goal of supplying on a timely and cost-effective basis the most environmentally friendly portable power source products to our target markets. We believe our products will offer advantages in terms of performance, functionality, size, weight, and ease of use. We plan to continue enhancing our customers' industrial design alternatives and device functionality through innovative product development based on our existing capabilities and technological advances.

Capitalize on Growth Markets. We intend to capitalize on the growth of the electronic device markets, including new products that may be brought about by the convergence of computing, communications, and entertainment devices. We believe our portable power source products will address the growing need for portability, connectivity, and functionality in the evolving electronic device markets. We plan to offer power solutions to OEM customers that enable them to offer products with advantages in terms of size, weight, power duration, and environmental friendliness. We plan to utilize our existing technologies, as well as aggressively pursue new technologies and evolving markets that demand enhanced power solutions.

Develop Strong Customer Relationships. We plan to develop strong and long-lasting customer relationships with leading electronic device OEMs and to provide them with power solutions for their products. We believe that our portable power source products will enable our OEM customers to deliver a more positive user experience and to differentiate their products from those of their competitors. We will attempt to enhance the competitive position of our customers by providing them with innovative, distinctive, and high-quality portable power supply products on a timely and cost-effective basis. We will work continually to improve our portable power source products, reduce costs, and accelerate the speed of delivery of our products while addressing the power requirements and compatibility they need. We will endeavor to streamline our designs and delivery processes through ongoing design, engineering, and production improvement efforts. We will also devote considerable effort to support our customers after the purchase of our portable power source products.

Pursue Strategic Relationships. We intend to develop and expand strategic relationships to enhance our ability to offer value-added customer solutions, penetrate new markets, and strengthen the technological leadership of our portable power source products.

Products

MTI Micro is developing three product categories of our Mobion technology: (i) external power charger products, (ii) snap-on or attached power source products, and (iii) embedded power source products. In addition, we are working with our strategic partners and suppliers to develop removable methanol cartridges that will be used to fuel our portable power source products.

External Power Charger: Our design for an external power charger is a standalone device that uses a standard and widely used universal serial bus, or USB, interface as a power output connector that can be used to recharge handheld mobile devices. Our current design for the device is roughly the size of two decks of playing cards (see photo below) and employs a 100% methanol fuel cartridge, which occupies the same volume as a pack of chewing gum. For each removable cartridge, our current prototype external power charger provides up to one month of power for the typical mobile phone. It can also be designed to enable a professional photographer to take over 5,000 pictures using a high end digital camera from a single cartridge. Our device is designed to provide 2.5 watts of power output from its USB interface and also offer fast charge, ultra-long run time and self-charging modes.

Mobion external power charger with removable cartridge prototype

Snap-on or Attached Power Source Products: Similar to aftermarket battery attachments, our snap-on direct methanol fuel cell power solution is an attached power supply that is compatible with existing portable electronic devices and offers users extended run-time power. In this category, we envision a number of product applications, including attachments for digital cameras, portable media players, GPS devices, and other consumer and electronic products. Our initial prototype is a direct methanol fuel cell camera-grip (see photo below) that replaces comparable rechargeable lithium-ion battery-pack grips and is designed to provide twice as much energy as similar rechargeable lithium-ion battery-based products. Our Mobion direct methanol fuel cell camera grip allows photographers the benefits of extended usage plus the freedom to refill using a methanol cartridge rather than by plugging into a wall outlet.

Sample Mobion attached power source camera-grip prototype

Embedded power source products: Our goal is to produce direct methanol fuel cells that can be embedded into portable electronic devices in order to increase their run time and to provide fast charge capability by hot-swapping 100% methanol cartridges. We have developed an embedded fuel cell prototype for a handheld GPS unit that we believe will generate three times as much usage time as GPS devices powered by conventional disposable AA batteries (see photo below.)

Prototype of a GPS unit with an embedded Mobion power source

We have also developed an embedded fuel cell concept model designed for a smart phone (see photo below) and believe that this concept model highlights the anticipated future product direction for our portable power source products in the consumer market.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Concept model of a smart phone with an embedded Mobion power source

Advantages of our Portable Power Source Products

We believe that our portable power source products will offer the following advantages:

- Off-the-grid power source. Our products provide users of consumer electronic devices with extended mobility by providing power without having to attach to a wall outlet to recharge their devices.
- Mobility. Our power source provides off-the-grid power both indoors and outdoors, using the power generated from its methanol fuel; it does not need sunlight or wind to generate electricity.
- Small size and low weight. The dimensions of our products will offer our OEM customers the flexibility to further enhance and reduce the overall size and weight of their products.
- Power density. Our products have demonstrated power density of over 84 mW/cm² and high energy efficiencies of 1.4 Wh/cc of methanol.
- Power duration. Our products do not limit power capacity found with a typical battery that just stores electricity. Our product continually generates electricity as you refuel with methanol.
- Ease of manufacturing. Our products will be manufactured using traditional injection molding techniques and system assembly operations that will easily transfer to mass-manufacturing production lines.
- Safety. Our products will utilize methanol fuel, which has been determined by the ICAO (International Civil Aviation Organization) and the US DOT to be safe; methanol cartridges can be carried on airplanes. In addition, methanol does not require storage under pressure or at low temperatures.
- Environmentally friendly. Our products will utilize fully biodegradable methanol fuel. Also, methanol can be sourced from environmentally friendly sources like wood pulp and lumber tailings which yield a carbon neutral impact while generating electricity.

Codes and Standards

In 2004, we became the world's first company to develop micro fuel cell safety compliance certifications for a fuel cell product with Underwriter's Laboratory and CSA International. In addition, fuel cells were given United Nations packaging standards and our methanol cartridges are designed to be compliant by the U.S. Department of Transportation for worldwide cargo shipment. Certification is required for every commercial product prior to its shipment. Based upon our previous experiences with these regulatory agencies, we do not anticipate delays associated with seeking Underwriter's Laboratory and CSA International product testing for our commercial products, which, assuming available financing, are anticipated to begin shipping in 2010.

We also assisted in the development of a proposal adopted by the United Nations to provide methanol fuel cartridges a separate classification and, working with other micro fuel cell companies and the appropriate regulatory bodies, generated the first draft of the international standards for methanol safety and use related to transport on commercial airplanes. As a result of our industry coalition efforts, the International Civil Aviation Organization (ICAO) technical instructions and the International Air Transport Association Dangerous Goods Regulations now permit airline passengers and crew to carry on and use certain fuel cell power systems and fuel cell cartridges containing methanol. On April 30, 2008, the U.S. Department of Transportation issued a notification of final rules for adopting the regulations permitting commercial aircraft passengers and crew to bring in their carry-on baggage methanol fuel cell cartridges and fuel cell systems designed for portable electronic devices. The effective date of the final rule making was February 13, 2009.

Technology

A fuel cell is an electrochemical energy conversion device, which is similar to a battery that produces electricity from a liquid or gaseous fuel, such as methanol, and an oxidant, such as oxygen. Fuel cells are different from batteries in that they consume a reactant that can be replenished, while batteries store electrical energy chemically in a closed system. Generally, the reactants flow in and reaction products flow out of the fuel cell. While the electrodes within a battery react and change as a battery is charged or discharged, a fuel cell's electrodes are catalytic and relatively stable.

A direct methanol fuel cell relies upon the reaction of water with methanol at the catalytic anode layer to release protons and electrons, and form carbon dioxide. The electrons pass through a circuit and generate electricity that can be used to power external devices. The protons generated through this reaction pass through the proton exchange membrane to the cathode, where they combine to form water. The anode and cathode layers of a direct methanol fuel cell are usually made of platinum ruthenium particles and platinum particles embedded on either side of a proton exchange membrane.

Methanol fuel cells need water at the anode and therefore pure methanol cannot be used without the provision of water via either active transport, such as the pumping of water generated at the cathode back to the anode layer (see Chart A), or a passive recirculation mechanism that incorporates pressurized internal ducts or piping. Without either an active or a passive recirculation mechanism, a direct methanol fuel cell would require the inclusion of water as a dilutant in the methanol fuel, which limits the energy content of the diluted fuel (see Chart B).

Direct Methanol Fuel Cell with Active Water Transport

(Chart A)

Methanol Fuel Cell with Water as a Fuel Dilutant

(Chart B)

Our Mobion technology eliminates the need for active water recirculation pumps or the inclusion of water as a fuel dilutant. The water required for reaction at the anode is transferred internally within the Mobion Chip from the site of water generation on the air-side of the cell through a proprietary, passive design that eliminates the need for water movement by external pumps, complicated recirculation loops or other micro-plumbing tools (see Chart C).

Our Mobion Technology with 100% Methanol and Passive Water Recirculation (Chart C)

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Our Mobion solution contains a passive water recirculation sub-system that allows for the consumption of 100% methanol, results in a reduced parts count design and offers the advantage of higher energy density than competing fuel cell technologies for portable electronic devices.

Strategic Agreements

On April 16, 2009, we entered into a \$4.8 million cost-shared development contract with the U.S. Department of Energy, or the DOE, for the commercialization of our Mobion product solutions. Through December 2009, the DOE has authorized \$4.1 million of spending on a cost-shared basis. This contract expires on March 31, 2010.

On April 21, 2009, we entered into an agreement with a leading manufacturer of power tools to evaluate our product for their future cordless power tool products. Because of Mobion's flexible architecture, we were able to pursue opportunities beyond the consumer electronics market.

On October 31, 2008, we signed an agreement with a U.S. based developer and marketer of universal chargers to evaluate the feasibility, development and production of our Mobion products. This agreement, which took effect on August 29, 2008, will enable us and this developer to collaborate in evaluating and adopting our Mobion technology for use with a number of their products.

On September 10, 2008, MTI Micro and Duracell, part of The Gillette Company, which is part of the Procter & Gamble Company ("Duracell") entered into a letter of intent whereby both parties agree to explore a new relationship to collaborate on the market development and commercialization of Mobion based fuel cell systems and methanol fuel cartridges for the consumer market.

On April 28, 2008, we entered into a development agreement with a global Japanese consumer electronics company to evaluate the feasibility, development, and production of our Mobion products. This agreement will enable us and this developer to collaborate in evaluating and adopting our Mobion technology for use in various precision imaging applications, including digital cameras. On May 12, 2008, we announced that we delivered a Mobion prototype to this company for their evaluation.

On December 13, 2007, we entered into an agreement with Trident Systems, Inc. to pursue opportunities to leverage our consumer market platform into low-power military markets. Teaming opportunities include demonstrations of unattended ground sensor prototypes powered by Mobion and evaluations and potential submissions of proposals for military programs.

Manufacturing

We plan to outsource manufacturing of our portable power source products through third-party relationship contract manufacturers. We believe this strategy will provide us with a business model that allows us to concentrate on our core competencies of research and development and technological know-how and reduce our capital expenditures. In addition, this strategy will significantly reduce our working capital requirements for inventory because we will not incur most of our manufacturing costs until we have actually shipped our portable power source products to our customers and billed those customers for those products. To date, we have established an internal developmental pilot production line to test our design and engineering capabilities and a representative office in Shanghai to facilitate our efforts to develop relationships with manufacturers and low cost component suppliers in China. Although we have developed an internal developmental pilot production line, we intend to rely upon third parties to forecast production requirements and have established the basic design, function, and performance of our in-house engineering capabilities to foster the successful commercialization of our products.

The commercialization of our Mobion power solution will depend upon our ability to reduce the costs of our portable power source products, as they are currently more expensive than existing rechargeable battery technologies. In addition, we continue to work on enhancing our Mobion power source design, including our injection molded Mobion Chip, to ensure its manufacturability (including engineering, verification and product testing), design for assembly, design for testability, and design for serviceability, all of which are critical to successful high-volume production.

Sales and Marketing

We plan to sell our portable power source products for incorporation into the products of our OEM customers or to be sold as accessories using their own brand. We plan to generate sales to OEM customers through direct sales employees as well as outside sales representatives and distributors. We have established sales representatives in the United States, South Korea and Japan.

We build awareness in our target markets through a series of targeted campaigns, which include our website, e-mails, conferences, tradeshows, and other standard marketing efforts. In addition, we provide progress reports on our Mobion developments through a wide array of publications, active public relations, updates with industry analysts and the investment community, and speaking engagements.

Competition

We expect that the primary competitive factor in our portable power source business will be market acceptance of our portable power source products as an alternative power source to conventional lithium-ion and other rechargeable batteries. Market acceptance of our portable power source products will depend on a wide variety of factors, including the compatibility of direct methanol fuel cell power sources with portable electronic devices and the market's assessment of the advantages offered by our products in terms of size, weight, power density and duration, safety, reliability, and environmental friendliness when measured against price disadvantages. We anticipate direct competition from large Asian-based companies, including Toshiba (Corporation), which recently introduced a fuel cell charger, and some of our potential OEM customers.

Product Development

Over the past three years, we have developed and built a number of engineering prototypes used to validate our technology and to generate discussions with potential customers about the inclusion of our technology in new products. During the same period, we have created four generations of external power charger prototypes, each of which has shown a dramatic size reduction over the previous generation. Our latest external power charger prototype achieved a 60% reduction in volume over our first generation prototype and it has incorporated a removable methanol cartridge.

We have improved the capabilities of our Mobion Chip technology during the last three years, which we expect will continue to evolve as we integrate greater functionality into our designs. This continuous iterative integration process is intended to reduce the size, simplify the design and construction, and reduce assembly complexity of our technology. We continue to improve the product design of the Mobion Chip and believe that future product generations will deliver performance improvements in terms of energy density, size, weight, and power duration. The Mobion Chip should also be able to provide power directly to wireless electronic devices for refueling/repowering at a speed of 0.5 seconds, compared to rechargeable lithium-ion batteries that need approximately 2 hours.

Intellectual Property and Proprietary Rights

We rely on a combination of patents (both national and international), trade secrets, trademarks, and copyrights to protect our intellectual property. Our strategy is to apply for patent protection for all significant design requirements. Additionally, we systematically analyze the existing intellectual property landscape for direct methanol fuel cells to determine where the greatest opportunities for developing intellectual property exist. We also enter into standard confidentiality agreements with our employees, consultants, vendors, partners and potential customers and seek to control access to and distribution of our proprietary information.

As of December 31, 2009, we had filed over 111 U.S. patent applications, 54 of which have been awarded. Of the awarded patents, 45 are assigned to us and 9 are assigned to Duracell as part of our strategic alliance agreement with them. We have filed 33 Patent Cooperation Treaty Applications in multiple countries, including Japan, the European Union, South Korea and Australia. We have developed a portfolio of patent applications in areas including fuel cell systems, fuel refill and packaging, fuel, components, manufacturing processes, and system packaging.

The Test and Measurement Instrumentation Segment

MTI Instruments is a worldwide supplier of metrology, portable balancing equipment and inspection systems for semiconductor wafers. Our products use state-of-the-art technology to solve complex real world applications in numerous industries including automotive, semiconductor, solar cell manufacturing, commercial and military aviation and data storage. We are continuously working on ways to expand our sales reach, including expanded sales coverage in Europe and the Far East, as well as a focus on internet marketing. We have industry recognized customer service and have worked with hundreds of companies worldwide.

Products

Our test and measurement segment has three product groups: general dimensional gauging, semiconductor/solar and aviation. Our products consist of electronic, computerized gauging instruments for position, displacement and vibration applications for the design, manufacturing and test markets; metrology tools for wafer characterization of semiconductor and solar wafers; and engine balancing and vibration analysis systems for both military and commercial aircraft.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

General Dimensional Gauging: The Precision Instruments employ fiber optic, laser and capacitance technologies to make nano-accurate measurements in product design and quality related processes. Gauging products include laser, fiber-optic and capacitance systems that measure a variety of parameters including displacement, position, vibration and dimension.

Listed below are selected MTI Instruments' Precision Instruments product offerings:

Product	Description	Markets Served
Accumeasure Series	Ultra-high precision capacitive gauging system offering nanotechnology accuracy.	General manufacturing, semiconductor, automotive, R&D, government.
MTI-2100 Fotonic™ Sensor Series	Fiber-optic based vibration sensor systems with extremely high frequency response.	General manufacturing, semiconductor, automotive, R&D, government.
Microtrak™ II	High speed laser sensor systems utilizing the latest complementary metal-oxide semiconductor/charge-coupled device technology.	General manufacturing, semiconductor, automotive, R&D, government.

Semiconductor and Solar: Our family of wafer metrology systems range from manually operated units to fully automated systems which test key wafer characteristics critical to producing high quality chips used in the semiconductor industry. These units are used as quality control tools delivering highly precise measurements for thickness variations, bow, warp, resistivity, and flatness. These systems can be used on substrates varying widely in size and materials. In addition, using push/pull capacitance probe technology, we have expanded our line of products to include product offerings to the solar industry for the measurement of solar wafer thickness.

The semiconductor and solar metrology systems include the following products:

Product	Description	Markets Served
Proforma™ 200SA/300SA	Semi-automated, full wafer surface scanning for thickness, TTV, bow, warp, site and global flatness. The Proforma™200SA can be used for all wafer materials and accommodates diameters of 75 – 200 mm.	Wafer metrology segment of the semiconductor industry.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Proforma™ 300/300G

Manual, non-contact measurement of wafer thickness, TTV and bow. The Proforma™ 300 measures all wafer materials including Silicon, Gallium-Arsenide, Indium-Phosphide and wafers mounted to sapphire or tape. The Proforma™ 300/G can accept wafers from 50 to 300 mm.

Wafer metrology segment of the semiconductor industry.

PV 1000

The PV 1000 module provides up to three pairs of probes for measurement of maximum, minimum and average thickness, as well as total thickness variation (TTV) and wafer bow of solar wafers.

Solar cell manufacturing

Aviation: The computer-based PBS products automatically collect and record aircraft engine vibration data, identify vibration or balance trouble in an engine, and calculate a solution to the problem. These units are used and recommended by major aircraft engine manufacturers and are also used extensively by the U.S. Air Force, other military and commercial airlines and gas turbine manufacturers.

Our aviation and industrial vibration measurement systems products include vibration analysis and engine trim balance instruments and accessories for commercial and military jets. These products are designed to quickly pinpoint engine problems and eliminate unnecessary engine removals. Selected products in this area include:

Product	Description	Markets Served
PBS-4100+ Portable Balancing System	The standard of the aviation industry worldwide, the portable PBS-4100 Plus detects if an engine has a vibration problem or a trim balance problem and provides a solution. This system works on all engine types and models from all engine manufacturers.	Major commercial airlines, regional carriers, and the U.S. Military.
PBS-4100R Test Cell Vibration Analysis & Trim Balance System	Advanced trim balancing and diagnostic features for engine test cells.	Major commercial airlines, regional carriers, and the U.S. Military
PBS-3300	A compact balancing and vibration system for use in mobile test cells and distributed test stands.	Major commercial airlines, regional carriers, and the U.S. Military.

Marketing and Sales

We market our products and services using channels of distribution specific to each of our product groups and customer base. The general dimensional gauging product group markets its products through a combination of manufacturer representatives in the United States and distributors overseas. The semiconductor product group markets its products directly to end customers in the United States and internationally through distributors, while the aviation group primarily sells direct to the end user.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

To supplement these efforts, the company utilizes both commercial and industrial search engines, targeted newsletters and appropriate trade shows to identify and expand its customer base.

Comparisons of sales by class of products, which account for over 10 percent of MTII's sales, are shown below for the years ended December 31:

(Dollars in thousands)	2009		2008		2007	
	Sales	%	Sales	%	Sales	%
Aviation	\$ 2,768	44.19%	\$ 1,977	31.76%	\$ 3,664	40.58%
General Gauging	2,619	41.81	2,983	47.93	4,490	49.73
Semiconductor and Solar	876	14.00	1,264	20.31	874	9.69
Total	\$ 6,263	100.00%	\$ 6,224	100.00%	\$ 9,028	100.00%

Product Development and Manufacturing

MTI Instruments conducts research and develops technology to support its existing products and develop new products. Management believes that the success of the enterprise depends to a large extent upon innovation, technological expertise and new product development.

Our most recent product offerings include:

- In semiconductors, for 2009, the introduction of the PV 1000 product line servicing the Solar cell manufacturing industry.
- In aviation, introduction of the PBS-4100+ – an advanced and compact portable jet engine balancing and vibration diagnostics system for use by both military and commercial carriers.
- In the general gauging area, the introduction of the MTI-2100 Fotonic™ Sensor - a "next generation" fiber-optic sensor for high-resolution, non-contact measurement of high frequency vibration and motion analysis. The amplifier replaced the MTI-2000 Fotonic Sensor.
- MTI Instruments also added the 1515 low-noise amplifier to its Accumeasure product line, which is designed to meet the stringent requirements of brake rotor measurement applications in the automotive industry.

We seek to achieve a competitive position by continuously advancing our technology rather than relying on patent protection. MTI Instruments has one patent supporting its semiconductor line.

MTI Instruments assembles and tests its products at its facilities located in Albany, New York. Management believes that most of the raw materials used in our products are readily available from a variety of vendors.

Intellectual Property and Proprietary Rights

We rely on trade secret laws and patents to establish and protect the proprietary rights of our products. In addition, we enter into standard confidentiality agreements with our employees and consultants and seek to control access to and distribution of our proprietary information. Even with these precautions, it may be possible for a third party to copy or otherwise obtain and use our products or technology without authorization or to develop similar technology independently. In addition, effective patent and trade secret protection may be unavailable or limited in certain foreign countries. We have one patent issued supporting our semiconductor product line.

Significant Customers

MTI Instruments' largest customer is the U.S. Air Force. We also have strong relationships with companies in the manufacturing, semiconductor, automotive, aerospace, aircraft and research industries. In the Test and Measurement Instrumentation Segment, in 2009, the U.S. Air Force accounted for \$1,188 thousand or 19.0% of product revenues; in 2008, it accounted for \$974 thousand or 15.7% of product revenues; and in 2007, the U.S. Air Force accounted for \$2.4 million, or 26.3%, of product revenue.

Recent Contracts

In 2009, MTI Instruments was awarded a multi-year U.S. Air Force contract to service and repair its existing fleet of PBS-4100 jet engine balancing systems with the latest diagnostic and balancing technology, which could potentially generate up to a total of \$6,500 thousand in sales for the Company between the years 2009 and 2014. As of December 31, 2009, MTI Instruments had recorded \$439 thousand in orders,

approximately 6.8% of the five-year contract's total value.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

In 2007, we were awarded a multi-year U.S. Air Force contract for the purchase of up to \$2,280 thousand in PBS4100+ portable aircraft engine balancing systems. As of December 31, 2009, we had recorded \$2,109 thousand in orders, approximately 92.5% of the three-year contract's total value.

In 2002, we were awarded a multi-year \$8,800 thousand U.S. Air Force contract to service and retrofit its existing fleet of PBS-4100 jet engine balancing systems. This contract has generated a total of \$8,009 thousand in sales for the Company between the years 2002 and 2009. Although, this contract has expired, one delivery order remains open under the contract as of December 31, 2009.

Competition

We are subject to competition from several companies, many of which are larger than MTI Instruments and have greater financial resources. MTI Instruments' competitors include KLA-Tencor, Sigma Tech Corporation, E+H Eichhorn+Hausmann GmbH, Chadwick-Helmuth Company, Inc., ACES Systems, Micro-Epsilon, and Keyence Corporation.

While MTI Instruments has a share of its respective specialized market segments, it does not consider its share to be dominant within its industry. The primary competitive considerations in MTI Instruments' markets are product quality, performance, price, timely delivery, and the ability to identify, pursue and bring new customers. MTI Instruments believes that its employees, product development skills, sales and marketing systems and reputation are competitive advantages.

Research and Development

MTI Micro's research and development team is responsible for advanced research, product planning, design and development, and quality assurance. Through our supply chain, we are also working with subcontractors in developing specific components of our technologies. The primary objective of our research and development program is to advance the development of our direct methanol fuel cell technology to enhance the commercial value of our products and technology, as well as to develop next generation fuel cell products.

MTI Instruments conducts research and develops technology to support its existing products and develop new products. Management believes that the success of the enterprise depends to a large extent upon innovation, technological expertise and new product development. MTI, through its subsidiaries MTI Micro and MTI Instruments has incurred research and development costs of approximately \$11.8 million, \$8.3 million and \$3.3 million for the years ended December 31, 2007, 2008, and 2009, respectively. We expect to continue to invest in research and development in the future.

Employees

As of December 31, 2009, we had 52 employees. Of these employees, 21 were involved in our new energy segment and 31 were involved in our test and measurement instrumentation business. Two of our employees are also involved in corporate functions.

Properties

We presently lease two premises in the United States and one office in Shanghai, China. MTI Instruments is located at 325 Washington Avenue Extension, Albany, New York. This premise consists of approximately 17,424 useable square feet of space, with the lease expiring in late 2014. MTI Micro and MTI are located at 431 New Karner Road, Albany, NY. This premise consists of approximately 20,000 useable square feet of space, with the lease expiring in August 2010. Together, the premises are adequate for our current and foreseeable needs. The office in Shanghai, China is a representative office, with approximately 310 usable square feet of space. The lease expires in 2010.

Legal Proceedings

We are not currently involved in any legal proceeding that we believe would have a material adverse effect on our business or financial condition.

Availability of Information

We make available through our website (<http://www.mechtech.com>), free of charge, our Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, and amendments to those reports, filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934, as amended, as soon as reasonably practicable after such reports are electronically filed with, or furnished to, the SEC. These reports may be accessed through our website's Investor Relations page.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

The public may read and copy any materials we file with the SEC at the SEC Public Reference Room at 100 F Street, NE, Room 1580, Washington, DC 20549. The public may obtain information on the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. We file electronically with the SEC and the SEC maintains an Internet site (<http://www.sec.gov>) that contains reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC.

Item 1A: Risk Factors

Factors Affecting Future Results

This Annual Report on Form 10-K and the documents we have filed with the SEC that are incorporated by reference into this Annual Report on Form 10-K contain forward-looking statements that involve risks and uncertainties. Any statements contained, or incorporated by reference, in this Form 10-K that are not statements of historical fact may be forward-looking statements. When we use the words “anticipate,” “estimate,” “plans,” “projects,” “continuing,” “ongoing,” “expects,” “management believes,” “we believe,” “we intend,” “should,” “could,” “may,” “will” and similar words are identifying forward-looking statements. Forward-looking statements involve risks, uncertainties, estimates and assumptions which may cause our actual results, performance or achievements to be materially different from those expressed or implied by forward-looking statements. These factors include, among others:

- our need to raise additional financing for our New Energy segment;
- our history of recurring net losses and the risk of continued net losses;
- our independent auditors have included a going concern paragraph in their opinion;
- sales revenue growth of our test and measurement instrumentation business may not be achieved;
- the dependence of our test and measurement instrumentation business on a small number of customers and potential loss of government funding;
- our ownership position in MTI Micro may be reduced as a result of our plans to seek external financing for MTI Micro’s operations;
- risks related to developing Mobion direct methanol fuel cells and whether we will ever successfully develop reliable and commercially viable Mobion fuel cell solutions;
- our portable power source products or our customers’ products that utilize our portable power source products may not be accepted by the market;
- our inability to build and maintain relationships with our customers;
- our limited experience in manufacturing fuel cell systems on a commercial basis;
- our dependence on others for our production requirements for our portable power source products;
- our dependence on our manufacturing subcontractors to provide high levels of productivity and satisfactory delivery schedules for our portable power source products;
- our dependence on third-party suppliers for most of the manufacturing equipment necessary to produce our portable power source products;
- our inability to obtain sufficient quantities of components and other materials, including platinum and ruthenium, necessary for the production of our portable power source products;
- our dependence on OEMs integrating Mobion fuel cell systems into their devices;
- our lack of long-term purchase commitments from our customers and the ability of our customers to cancel, reduce, or delay orders for our products;
- risks related to protection and infringement of intellectual property;
- our new technologies may not result in customer or market acceptance;
- our inability to commercialize our proposed portable power source solutions and develop new product solutions on a timely basis;

- our inability to develop and utilize new technologies that address the needs of our customers;
- intense competition in the direct methanol fuel cell and instrumentation businesses;
- changes in policies by U.S. or foreign governments that hinder, disrupt, or economically disadvantage international trade;
- the impact of future exchange rate fluctuations;
- the uncertainty of the U.S. economy;
- the historical volatility of our stock price;
- the cyclical nature of the electronics industry;
- failure of our strategic alliances to achieve their objectives or perform as contemplated and the risk of cancellation or early termination of such alliance by either party;
- product liability or defects;
- risks related to the flammable nature of methanol as a fuel source;
- the loss of services of one or more of our key employees or the inability to hire, train, and retain key personnel;
- significant periodic and seasonal quarterly fluctuations in our results of operations;
- our dependence on sole suppliers or a limited group of suppliers for both business segments;
- risks related to the limitation of the use of our net operating losses in the event of certain ownership changes; and
- other factors discussed under the headings “Risk Factors” below.

Except as may be required by applicable law, we do not undertake or intend to update or revise our forward-looking statements, and we assume no obligation to update any forward-looking statements contained in, or incorporated by reference into, this Annual Report on Form 10-K as a result of new information or future events or developments. Thus, assumptions should not be made that our silence over time means that actual events are bearing out as expressed or implied in such forward-looking statements.

Risk Factors

Set forth below are certain risks and uncertainties that could adversely affect our results of operations or financial condition and cause our actual results to differ materially from those expressed in our forward-looking statements. Also refer to Factors Affecting Future Results.

We have incurred recurring net losses and anticipate continued net losses as we execute our commercialization plan for our portable power source business. If we do not raise financing in the next few months, we will be required to dramatically downsize, discontinue, or sell our portable power source business and/or our test and measurement instrumentation business.

We have incurred recurring net losses, including net losses of \$9.6 million in 2007, \$12.5 million in 2008, and \$3.1 million in 2009. As a result of ongoing operating losses, we had an accumulated deficit of approximately \$121 million as of December 31, 2009. Subject to cash availability, we expect to continue to make significant expenditures and incur substantial expenses as we develop and commercialize our proposed portable power source products; develop our manufacturing, sales, and distribution networks; implement internal systems and infrastructure; and hire additional personnel. As a result, we expect to continue to incur significant losses as we execute our plan to commercialize our portable power source business and may never achieve or maintain profitability. We will be unable to satisfy our current obligations solely from cash generated from operations or become profitable until we successfully commercialize our portable power source business. If we continue to incur substantial losses and are unable to secure additional financing, we could be forced to discontinue or curtail our business operations; sell assets at unfavorable prices; or merge, consolidate, or combine with a company with greater financial resources in a transaction that may be unfavorable to us.

At present, the Company does not expect to continue to fund MTI Micro on a long-term basis. Based on the Company's projected cash requirements for operations and capital expenditures and its current cash and cash equivalents of \$785 thousand at December 31, 2009, management believes it will have adequate resources to fund its current operations, excluding MTI Micro operations, but there can be no assurance. Since the company will no longer fund MTI Micro, the subsidiary has sought other sources of funding, but there is no assurance that such funding will be available on acceptable terms, if at all.

We currently do not have sufficient funds to commercialize our portable power source products.

In order to continue full commercialization of its micro fuel cell solution, MTI Micro will need to do one or more of the following to raise additional resources, or reduce its cash requirements:

- obtain additional government or private funding of the Company's direct methanol fuel cell research, development, manufacturing readiness and commercialization;
- secure additional debt or equity financing; or
- further reduce its current expenditure run-rate.

There is no guarantee that resources will be available to MTI Micro on terms acceptable to it, or at all, or that such resources will be received in a timely manner, if at all, or that MTI Micro will be able to reduce its expenditure run-rate without materially and adversely affecting its business. MTI Micro had cash and cash equivalents as of December 31, 2009 of \$163 thousand. Subsequent to December 2009, MTI Micro collected outstanding receivable billings from the DOE of \$307 thousand and received \$660 thousand through the Common Stock and Warrant Purchase Agreement (the "Agreement"). Additionally, MTI Micro has \$1,340 thousand of available borrowing capacity through the Agreement, and the remaining \$191 thousand for the DOE contract as work is performed. However, the funds available through the Agreement are only available to us in increments of \$330 thousand bi-monthly. Our next available draw down is May 2010.

In order to conserve cash and extend operations while we pursue any additional necessary financing, we would be required to reduce operating expenses. There is no assurance that funds raised in any such a financing will be sufficient, that the financing will be available on terms favorable to us or to existing stockholders and at such times as required, or that we will be able to obtain the additional financing required for the continued operation and growth of our business. During the last sixteen months, MTI Micro has raised \$3.1 million in external debt and equity financing. If we raise additional funds by issuing equity securities, MTI Micro's stockholders will experience further dilution. Additional debt financing, if available, may involve restrictive covenants. Any debt financing or additional equity financing may contain terms that are not favorable to us or our stockholders. If we raise additional funds through collaboration and licensing arrangements with third parties, it may be necessary to relinquish some rights to our technologies or our products, or grant licenses on terms that are not favorable to us. If we are unable to raise adequate funds, we may have to liquidate some or all of our assets or delay, reduce the scope of or eliminate some or all of our research and development programs, or discontinue our portable power source business. Without other resources, management currently believes it will need to make significant changes to its operations during the month of April of 2010.

Continuing uncertainty of the U.S. economy may have serious implications for the growth and stability of our business and may negatively affect our stock price.

The revenue growth and profitability of our business will depend significantly on the overall demand for test and measurement instrumentations as well as electronic devices. Softening demand in these markets caused by ongoing economic uncertainty may result in decreased revenue or earnings levels. The U.S. economy has been historically cyclical and market conditions continue to be challenging, which has resulted in individuals and companies delaying or reducing expenditures. Further delays or reductions in spending could have a material adverse effect on demand for our products, and consequently on our business, financial condition, results of operations, prospects, stock price, and ability to continue to operate.

We currently derive all of our product revenue from our test and measurement instrumentation business.

Our test and measurement instrumentation business is subject to a number of risks, including the following:

- a continued slow down or cancellation of sales to the military as a result of a potential redeployment of governmental funding;
- the company may not be able to maintain, improve, or expand its direct and indirect channels of distribution;
- a failure to expand or maintain the business as a result of competition, a lack of brand awareness, or market saturation; and

- an inability to launch new products as a result of intensive competition, uncertainty of new technology development, and developmental timelines.

In addition, our test and measurement instrumentation products can be sold in quantity to a relatively few number of customers, resulting in a customer concentration risk. This business experienced a significant decline in sales in 2008 and sales were comparable in 2009. The further loss of any significant portion of such customers or a material adverse change in the financial condition of any one of these customers could have a material adverse effect on our business.

If we are required to discontinue our portable power source business due to lack of funding, all of our corporate overhead costs would be allocated to the test and measurement instrumentation business.

We have not generated any product revenue from our portable power source business and currently have no portable power source commercial products.

We have not generated any product revenue from our portable power source business and currently have no portable power source commercial products. The successful development and commercialization of our portable power source products will depend on a number of factors, including the following:

- continuing our research and development efforts;
- finalizing the design of our portable power source products;
- securing OEM customers to incorporate our portable power source products into products sold by them;
- arranging for adequate manufacturing capabilities; and
- completing, refining, and managing our supply chain and distribution channels.

Additionally, our technology is new and complex, and there may be technical barriers to the development of our portable power source products. The development of our portable power source products may not succeed or may be significantly delayed. Our portable power source products will be produced through manufacturing arrangements that have not been finalized or tested on a commercial scale. If we fail to successfully develop or experience significant delays in the development of our portable power source products, or if there are significant delays in commercialization, we are unlikely to recover those losses, thus making it impossible for us to become profitable through the sales of these products. This would materially and adversely affect our business and financial condition. If adequate funds are not available by the second quarter of 2010, we may have to delay development or commercialization of our portable power source products, or license to third parties the rights to commercialize products or technologies that we would otherwise seek to commercialize. Any of these factors could harm our business and financial condition.

Any revenue derived in the relatively near-term relating to our portable power source business likely will result from governmental contracts or other governmental funding. We can offer no assurance that we will be able to secure continued government funding. The loss of such contracts or the inability to obtain additional contracts could materially harm our business.

Our ownership position in MTI Micro may be reduced as a result of external financing for MTI Micro's operations, which could limit our ability to control the operations.

As of December 31, 2009, we owned approximately 61.8% of the outstanding equity in MTI Micro and have control over the operations of this subsidiary. As a result of the negotiated conversion in December 2009 of an aggregate principal and accrued interest amount of \$3,910,510 outstanding under the Bridge Notes, the Company's ownership interest in MTI Micro decreased from approximately 97.3% to approximately 61.8%, or 67.8% on a fully-diluted basis including the Micro Warrants issued to all current MTI Micro stockholders and the Bridge Warrants.

On January 11, 2010, MTI Micro entered into a Common Stock and Warrant Purchase Agreement (the "Purchase Agreement") with Counter Point Ventures Fund II, L.P. ("Counter Point"). Pursuant to the Purchase Agreement, MTI Micro may issue and sell to Counter Point up to 28,571,429 shares of common stock of Micro at a purchase price per share of \$0.070, over a period of twelve months, and warrants ("Warrants") to purchase shares of Micro Common Stock equal to 20% of the shares of Micro Common Stock purchased under the Purchase Agreement at an exercise price of \$0.070 per share. If MTI Micro were to issue and sell all of the 28,571,429 shares under the Purchase Agreement, the Company would continue to hold an aggregate of 55.8% of the fully-diluted capital stock of MTI Micro.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

In addition, we do not currently expect to advance additional long-term resources to MTI Micro to fund its continued direct methanol fuel cell development and commercialization programs. Instead, MTI Micro will seek additional capital from external sources to fund future development and operations. Depending on the valuation of MTI Micro at the time of future financings, if any, our ownership position could be substantially diluted, and we may no longer have sufficient equity to control the operations of MTI Micro. If MTI Micro is unable to secure the necessary additional external financing, we may be forced to substantially downsize or eliminate its operations.

We may experience an ownership change which would result in a limitation of the use of our net operating losses.

As of December 31, 2009, we had approximately \$65 million of net operating loss, or NOL, carryforwards. As a result of the conversion of the Bridge Notes, MTI no longer maintains an 80% or greater ownership of MTI Micro. Thus MTI Micro will no longer be included in the MTI and subsidiaries consolidated federal and combined New York State tax returns, effective December 9, 2009. A reattribution of a portion of MTI Micro's NOLs is expected, which will reduce MTI Micro's NOLs to approximately \$13 million, and MTI's balance will be approximately \$52 million. Also as a result of the conversion of the bridge note, MTI Micro may have experienced a Section 382 ownership change, which would further reduce their NOLs by an estimated \$6.7 million. Our ability to utilize both the MTI and MTI Micro NOL carryforwards, including any future NOL carryforwards that may arise, may be limited by Section 382 of the Internal Revenue Code of 1986, as amended, if we or MTI Micro undergo any further "ownership changes" as a result of subsequent changes in the ownership of our outstanding common stock pursuant to the exercise of the warrants, the conversion of the MTI Micro's bridge notes, or otherwise. A corporation generally undergoes an "ownership change" when the ownership of its stock, by value, changes by more than 50 percentage points over any three-year testing period. In the event of an ownership change, Section 382 imposes an annual limitation on the amount of post-ownership change taxable income a corporation may offset with pre-ownership change NOL carryforwards and certain recognized built-in losses.

Our common stock was delisted from the NASDAQ Stock Market, which could adversely affect the price of our stock and the ability of our stockholders to trade in our stock.

In April 2009, we voluntarily delisted our common stock from the NASDAQ Stock Market to reduce expenses and to avoid a likely involuntary delisting for failure to comply with the continued listing requirements. Our common stock subsequently began trading on the Pink Sheets under the symbol "MKTYPK." As a result of the delisting, the liquidity in our stock may decrease, which could adversely affect the price of our stock and make it more difficult for you to trade in our stock.

Our portable power source products may not be accepted by the market.

Any portable power source products that we develop may not achieve market acceptance. The development of a successful market for our proposed portable power source products and our ability to sell those products at favorable prices may be adversely affected by a number of factors, many of which are beyond our control, including the following:

- our failure to produce portable power source products that compete favorably against other products on the basis of price, quality, performance, and life;
- competition from conventional lithium-ion or other rechargeable battery systems;
- the ability of our technologies and product solutions to address the needs of the electronic device markets, the requirements of OEMs, and the preferences of end users;
- our ability to provide OEMs with portable power source products that provide advantages in terms of size, weight, peak power, power duration, reliability, durability, performance, and value-added features compared to alternative solutions; and
- our failure to develop and maintain successful relationships with OEMs, manufacturers, distributors, and others as well as strategic partners.

Target markets for our proposed portable power source products, such as those for mobile phones (including smart phones) and mobile phone accessories, digital cameras, portable media players, PDAs, and GPS devices, are volatile, cyclical, and rapidly changing and could continue to utilize existing technology or adopt other new competing technologies. The market for certain of these products depends in part upon the development and deployment of wireless and other technologies, which may or may not address the needs of users of these new products.

Many manufacturers of portable electronic devices have well-established relationships with competitive suppliers. Penetrating these markets will require us to offer better performance alternatives to existing solutions at competitive costs. The failure of any of our target markets to continue to expand, or our failure to penetrate these markets to a significant extent, will impede our sales growth. We cannot predict the growth rate of these markets or the market share we will achieve in these markets in the future.

If our proposed portable power source products fail to gain market acceptance, it could materially and adversely affect our business and financial condition.

Market acceptance of our customers' products that utilize our portable power source products may decline or may not develop and, as a result, our sales will be harmed.

We plan to produce portable power source products that our OEM customers incorporate into their products. As a result, the success of our proposed portable power source products will depend upon the widespread market acceptance of the products of our OEM customers. We will not control or influence the manufacture, promotion, distribution, or pricing of the products that incorporate our portable power source products. Instead, we will depend on our OEM customers to manufacture and distribute products incorporating our portable power source products and to generate consumer demand through their marketing and promotional activities. Even if our technologies and products successfully meet our customers' price and performance goals, our sales would be harmed if our OEM customers do not achieve commercial success in selling their products to consumers that incorporate our portable power source products.

Any lack of adoption in the use of our portable power source products by OEM customers in the electronic device markets, the reduced demand for our OEM customers' products, or a slowdown in their markets would adversely affect our sales.

If we fail to build and maintain relationships with our customers and do not satisfy our customers, we may lose future sales and our revenue may stagnate or decline.

Because our success depends on the widespread market acceptance of our customers' products, we must develop and maintain our relationships with leading global OEMs of electronic devices, such as mobile phones (including smart phones) and mobile phone accessories, digital cameras, portable media players, PDAs, and GPS devices. In addition, we must identify areas of significant growth potential in other markets, establish relationships with OEMs in those markets, and assist them in developing products that use our portable power source products and technologies. Our failure to identify potential growth opportunities, particularly in new markets, or establish and maintain relationships with OEMs in those markets, would prevent our business from growing in those markets.

Our ability to meet the expectations of our customers will require us to provide portable power source products for customers on a timely and cost-effective basis and to maintain customer satisfaction with our product solutions. We must match our design and production capacity with customer demand, maintain satisfactory delivery schedules, and meet specific performance goals. If we are unable to achieve these goals for any reason, our customers could reduce their purchases from us and our sales would decline or fail to develop.

Our customer relationships also can be affected by factors affecting our customers that are unrelated to our performance. These factors can include a myriad of situations, including business reversals of customers, determinations by customers to change their product mix or abandon business segments, or mergers, consolidations, or acquisitions involving our customers.

We have no experience manufacturing portable power source products on a commercial scale.

To date, we have focused primarily on research, development, and pilot production, and we have no experience manufacturing any portable power source products on a commercial scale. Our pilot production efforts to date have been limited in scale. It is our intent to manufacture our portable power source products through OEM customers and third-party manufacturers. Failure to secure manufacturing capabilities could materially and adversely affect our business and financial condition.

We will rely on others for our production, and any interruptions of these arrangements could disrupt our ability to fill our customers' orders.

We plan to rely on others for all of our production requirements for our portable power source products. The majority of this manufacturing is anticipated to be conducted in Asia by manufacturing subcontractors that also perform services for numerous other companies. We do not expect to have a guaranteed level of production capacity with any of our manufacturing subcontractors. Qualifying new manufacturing subcontractors is time consuming and might result in unforeseen manufacturing and operating problems. The loss of any relationships with our manufacturing subcontractors or assemblers or their inability to conduct their manufacturing and assembly services for us as anticipated in terms of cost, quality, and timeliness could adversely affect our ability to fill customer orders in accordance with required delivery, quality, and performance requirements. If this were to occur, the resulting decline in revenue would harm our business.

We will depend on third parties to maintain satisfactory manufacturing yields and delivery schedules, and their inability to do so could increase our costs, disrupt our supply chain, and result in our inability to deliver our portable power source products, which would adversely affect our results of operations.

We will depend on our manufacturing subcontractors to maintain high levels of productivity and satisfactory delivery schedules for our portable power source products from manufacturing and assembly facilities likely located primarily in Asia. We plan to provide our manufacturing subcontractors with rolling forecasts of our production requirements. We do not, however, anticipate having long-term agreements with any of our manufacturing subcontractors that guarantee production capacity, prices, lead times, or delivery schedules. Our manufacturing subcontractors will serve other customers, many of which will have greater production requirements than we do. As a result, our manufacturing subcontractors could determine to prioritize production capacity for other customers or reduce or eliminate deliveries to us on short notice. We may experience lower than anticipated manufacturing yields and lengthening of delivery schedules. Lower than expected manufacturing yields could increase our costs or disrupt our supply chain. We may encounter lower manufacturing yields and longer delivery schedules while commencing volume production of any new products. Any of these problems could result in our inability to deliver our product solutions in a timely manner and adversely affect our operating results.

We plan to rely on third-party suppliers for most of our manufacturing equipment.

We plan to rely on third-party suppliers for most of the manufacturing equipment necessary to produce our portable power source products. The failure of suppliers to supply manufacturing equipment in a timely manner or on commercially reasonable terms could delay our commercialization plans and otherwise disrupt our production schedules or increase our manufacturing costs. Further, our orders with certain of our suppliers may represent a very small portion of their total orders. As a result, they may not give priority to our business, leading to potential delays in or cancellation of our orders. If any single-source supplier were to fail to supply our needs on a timely basis or cease providing us with key components, we would be required to substitute suppliers. We may have difficulty identifying a substitute supplier in a timely manner and on commercially reasonable terms. If this were to occur, our business would be harmed.

Shortages of components and raw materials may delay or reduce our sales and increase our costs, thereby harming our results of operations.

The inability to obtain sufficient quantities of components and other materials, including platinum and ruthenium, necessary for the production of our portable power source products could result in reduced or delayed sales or lost orders. Any delay in or loss of sales could adversely impact our operating results. Many of the materials used in the production of our portable power source products will be available only from a limited number of foreign suppliers, particularly component suppliers located in Asia. In most cases, neither we nor our manufacturing subcontractors will have long-term supply contracts with these suppliers. As a result, we will be subject to economic instability in these Asian countries as well as to increased costs, supply interruptions, and difficulties in obtaining materials. Our customers also may encounter difficulties or increased costs in obtaining the materials necessary to produce their products into which our product solutions are incorporated.

From time to time, materials and components necessary for our portable power source products or in other aspects of our customers' products may be subject to allocation because of shortages of these materials and components. Shortages in the future could cause delayed shipments, customer dissatisfaction, and lower revenue.

We will be subject to lengthy development periods and product acceptance cycles, which can result in development and engineering costs without any future revenue.

We plan to provide portable power source solutions that are incorporated by OEMs into the products they sell. OEMs will make the determination during their product development programs whether to incorporate our portable power source solutions or pursue other alternatives. This process may require us to make significant investments of time and resources in the design of portable customer-specific power source solutions well before our customers introduce their products incorporating our product solutions and before we can be sure that we will generate any significant sales to our customers or even recover our investment. During a customer's entire product development process, we will face the risk that our portable power source products will fail to meet our customer's technical, performance, or cost requirements or that our products will be replaced by competing products or alternative technological solutions. Even if we complete our design process in a manner satisfactory to our customer, the customer may decide to delay or terminate its product development efforts. The occurrence of any of these events could cause sales to not materialize, to be deferred, or to be cancelled, which would adversely affect our operating results.

We will not have long-term purchase commitments from our customers, and their ability to cancel, reduce, or delay orders could reduce our revenue and increase our costs.

Customers for our portable power source products will not provide us with firm, long-term volume purchase commitments, but instead will issue purchase orders to buy a specified number of units. As a result, customers may be able to cancel purchase orders or reduce or delay orders at any time. The cancellation, delay, or reduction of customer purchase orders could result in reduced revenue, excess inventory, and unabsorbed overhead. We currently have no presence in the electronic device markets. Our success in the electronic device markets will require us to establish the value added proposition of our products to OEMs that have traditionally used other portable power solutions. All of the markets we plan to serve are subject to severe competitive pressures, rapid technological change and product obsolescence, which may increase our inventory and overhead risks, resulting in increased costs.

Variability of customer requirements resulting in cancellations, reductions, or delays may adversely affect our operating results.

We will be required to provide rapid product turnaround and respond to short lead times. A variety of conditions, both specific to individual customers and generally affecting the demand for OEMs' products, may cause customers to cancel, reduce, or delay orders. Cancellations, reductions, or delays by a significant customer or by a group of customers could adversely affect our operating results. Customers may require rapid increases in production, which could strain our resources and reduce our margins.

If we are unable to adequately protect our intellectual property, our competitors and other third parties could produce products based on our intellectual property, which would substantially impair our ability to compete.

Our success and ability to compete depends in part upon our ability to maintain the proprietary nature of our technologies. We rely on a combination of patent, trade secret, copyright, and trademark law and license agreements, as well as nondisclosure agreements, to protect our intellectual property. These legal means, however, afford only limited protection and may not be adequate to protect our intellectual property rights. We cannot be certain that we were the first creator of inventions covered by pending patent applications or the first to file patent applications on these inventions. In addition, we cannot be sure that any of our pending patent applications will issue. The United States Patent and Trademark Office, or other foreign patent and trademark offices may deny or significantly narrow claims made under our patent applications and, even if issued, these patents may be successfully challenged, designed around, or may otherwise not provide us with any commercial protection.

We may in the future need to assert claims of infringement against third parties to protect our intellectual property. Regardless of the final outcome, any litigation to enforce our intellectual property rights in patents, copyrights, or trademarks could be highly unpredictable and result in substantial costs and diversion of resources, which could have a material and adverse effect on our business and financial condition. In the event of an adverse judgment, a court could hold that some or all of our asserted intellectual property rights are not infringed, or are invalid or unenforceable, and could award attorneys' fees to the other party.

We may become subject to claims of infringement or misappropriation of the intellectual property rights of others, which could prohibit us from selling our products, require us to obtain licenses from third parties or to develop non-infringing alternatives, and subject us to substantial monetary damages and injunctive relief.

We may receive notices from third parties that the manufacture, use, or sale of any products we develop infringes upon one or more claims of their patents. Moreover, because patent applications can take many years to issue, there may be currently pending applications, unknown to us, which may later result in issued patents that materially and adversely affect our business. Third parties could also assert infringement or misappropriation claims against us with respect to our future product offerings, if any. Whether or not such claims are valid, we cannot be certain that we have not infringed the intellectual property rights of such third parties. Any infringement or misappropriation claim could result in significant costs, substantial damages, and our inability to manufacture, market, or sell any of our product offerings that are found to infringe. Even if we were to prevail in any such action, the litigation could result in substantial cost and diversion of resources that could materially and adversely affect our business. If a court determined, or if we independently discovered, that our product offerings violated third-party proprietary rights, there can be no assurance that we would be able to re-engineer our product offerings to avoid those rights or obtain a license under those rights on commercially reasonable terms, if at all. As a result, we could be prohibited from selling products that are found to infringe upon the rights of others. Even if obtaining a license were feasible, it may be costly and time-consuming. A court could also enter orders that temporarily, preliminarily, or permanently enjoin us from making, using, selling, offering to sell, or importing our portable power source products, or could enter orders mandating that we undertake certain remedial activities. Further, a court could order us to pay compensatory damages for such infringement, plus prejudgment interest, and could in addition treble the compensatory damages and award attorneys' fees. These damages could materially and adversely affect our business and financial condition.

Confidentiality agreements with employees and others may not adequately prevent disclosure of our trade secrets and other proprietary information, which could limit our ability to compete.

We rely on trade secrets to protect our proprietary technology and processes. Trade secrets are difficult to protect. We enter into confidentiality and intellectual property assignment agreements with our employees, consultants, and other advisors. These agreements generally require that the other party keep confidential and not disclose to third parties confidential information developed by the party or made known to the party by us during the course of the party's relationship with us. However, these agreements may not be honored and enforcing a claim that a party illegally obtained and is using our trade secrets is difficult, expensive and time-consuming, and the outcome is unpredictable. The failure to obtain and maintain trade secret protection could adversely affect our competitive position.

Our efforts to develop new technologies may not result in commercial success, which could cause a decline in our revenue and could harm our business.

Our research and development efforts with respect to our technologies may not result in customer or market acceptance. Some or all of those technologies may not successfully make the transition from the research and development lab to cost-effective production as a result of technology problems, competitive cost issues, yield problems, and other factors. Even when we successfully complete a research and development effort with respect to a particular technology, our customers may decide not to introduce or may terminate products utilizing the technology for a variety of reasons, including the following:

- difficulties with other suppliers of components for the products;
- superior technologies developed by our competitors and unfavorable comparisons of our solutions with these technologies;
- price considerations; and
- lack of anticipated or actual market demand for the products.

The nature of our business will require us to make continuing investments for new technologies. Significant expenses relating to one or more new technologies that ultimately prove to be unsuccessful for any reason could have a material adverse effect on us. In addition, any investments or acquisitions made to enhance our technologies may prove to be unsuccessful. If our efforts are unsuccessful, our business could be harmed.

We may not be able to enhance our product solutions and develop new product solutions in a timely manner.

Our future operating results will depend to a significant extent on our ability to provide new portable power source products that compare favorably with alternative solutions on the basis of time to introduction, cost, performance, and end-user preferences. Our success in attracting customers and developing business will depend on various factors, including the following:

- innovative development of new portable power source products for customer products;
- utilization of advances in technology;
- maintenance of quality standards;
- efficient and cost-effective solutions; and
- timely completion of the design and introduction of new portable power source products.

Our inability to commercialize our proposed portable power source solutions and develop new product solutions on a timely basis could harm our operating results and impede our growth.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

If we do not keep pace with technological innovations, our products may not be competitive and our revenue and operating results may suffer.

Technological advances, the introduction of new products, and new design techniques could adversely affect our business prospects unless we are able to adapt to the changing conditions. Technological advances could render our proposed portable power source products obsolete, and we may not be able to respond effectively to the technological requirements of evolving markets. As a result, we will be required to expend substantial funds for and commit significant resources to

- continue research and development activities on portable power source products;
- hire additional engineering and other technical personnel; and
- purchase advanced design tools and test equipment.

Our business could be harmed if we are unable to develop and utilize new technologies that address the needs of our customers, or our competitors do so more effectively than we do.

New technology solutions that achieve significant market share could harm our business.

New portable power source solutions could be developed. Existing electronic devices also could be modified to allow for a different power source solution. Our business could be harmed if our products become noncompetitive as a result of a technological breakthrough that allows a new power source solution to displace our solution and achieve significant market acceptance.

Our inability to respond to changing technologies will harm our business.

The electronic, semiconductor, solar, automotive and general instrumentation industries are subject to constant technological change. Our future success will depend on our ability to respond appropriately to changing technologies and changes in product function and quality. If we rely on products and technologies that are not attractive to end users, we may not be successful in capturing or retaining any significant market share. In addition, any new technologies utilized in our portable power source products may not perform as expected or as desired, in which event our adoption of such products or technologies may harm our business.

International sales and manufacturing risks could adversely affect our operating results.

We anticipate that the manufacturing and assembly operations for our portable power source products will be conducted primarily in Asia by manufacturing subcontractors. We also believe that many of our OEM customers will be located and much of our sales and distribution operations will be conducted in Asia. These international operations will expose us to various economic, political, and other risks that could adversely affect our operations and operating results, including the following:

- difficulties and costs of staffing and managing a multi-national organization;
- unexpected changes in regulatory requirements;
- differing labor regulations;
- potentially adverse tax consequences;
- tariffs and duties and other trade barrier restrictions;
- possible employee turnover or labor unrest;
- greater difficulty in collecting accounts receivable;
- the burdens and costs of compliance with a variety of foreign laws;
- potentially reduced protection for intellectual property rights; and
- political or economic instability in certain parts of the world.

The risks associated with international operations could negatively affect our operating results.

Our business may suffer if international trade is hindered, disrupted, or economically disadvantaged.

Political and economic conditions abroad may adversely affect the foreign production and sale of our portable power source products. Protectionist trade legislation in either the United States or foreign countries, such as a change in the current tariff structures, export or import compliance laws, or other trade policies, could adversely affect our ability to sell our portable power source products in foreign markets and to obtain materials or equipment from foreign suppliers.

Changes in policies by the U.S. or foreign governments resulting in, among other things, higher taxation, currency conversion limitations, restrictions on the transfer of funds, or the expropriation of private enterprises also could have a material adverse effect on us. Any actions by countries in which we conduct business to reverse policies that encourage foreign investment or foreign trade also could adversely affect our operating results. In addition, U.S. trade policies, such as “most favored nation” status and trade preferences for certain Asian nations, could affect the attractiveness of our products to our U.S. customers and adversely impact our operating results.

Our operating results could be adversely affected by fluctuations in the value of the U.S. dollar against foreign currencies.

We transact our business predominantly in U.S. dollars and bill and collect our sales in U.S. dollars. In 2009, approximately 38% of our revenue was from customers outside of the United States. A weakening of the dollar could cause our overseas vendors to require renegotiation of either the prices or currency we pay for their goods and services. Similarly, a strengthening of the dollar could cause our products to be more expensive for our international customers, which could cause the demand for our products and our revenue to decline.

In the future, customers may negotiate pricing and make payments in non-U.S. currencies. If our overseas vendors or customers require us to transact business in non-U.S. currencies, fluctuations in foreign currency exchange rates could affect our cost of goods, operating expenses, and operating margins and could result in exchange losses. In addition, currency devaluation can result in a loss to us if we hold deposits of that currency. Hedging foreign currencies can be difficult, especially if the currency is not freely traded. We cannot predict the impact of future exchange rate fluctuations on our operating results.

We expect that a majority of our manufacturing subcontractors will be located in Asia, increasing the risk that a natural disaster, labor strike, war, or political unrest in those countries would disrupt our operations.

We expect that a majority of our manufacturing subcontractors will be located in Asia. Events out of our control, such as earthquakes, fires, floods, or other natural disasters, or political unrest, war, labor strikes, or work stoppages in Asia could disrupt their operations, which would impact our business. In addition, there is political tension between Taiwan and China that could lead to hostilities. If any of these events occur, we may not be able to obtain alternative manufacturing capacity. Failure to secure alternative manufacturing capacity could cause a delay in the shipment of our products, which would cause our revenue to fluctuate or decline.

The electronics industry is cyclical and may result in fluctuations in our operating results.

The electronics industry has experienced significant economic downturns at various times. These downturns are characterized by diminished product demand, accelerated erosion of average selling prices, and production overcapacity. In addition, the electronics industry is cyclical in nature. We will seek to reduce our exposure to industry downturns and cyclicity by providing design and production services for leading companies in rapidly expanding industry segments. We may, however, experience substantial period-to-period fluctuations in future operating results because of general industry conditions or events occurring in the general economy.

Our strategic alliances may not achieve their objectives, and their failure to do so could impede our growth.

We plan to explore additional strategic alliances designed to enhance or complement our technology or to work in conjunction with our technology; to provide necessary know-how, components, or supplies; and to develop, introduce, and distribute products utilizing our technology. Any strategic alliances may not achieve their intended objectives, may be cancelled by either party, and parties to our strategic alliances may not perform as contemplated. The failure of our current alliances or our inability to form additional alliances may impede our ability to introduce new products and enter new markets.

Product liability claims against us could result in adverse publicity and potentially significant monetary damages.

As a seller of consumer products using a flammable material such as methanol, we will face an inherent risk of exposure to product liability claims in the event that injuries result from product usage by customers. It is possible that our products could result in injury, whether by product malfunctions, defects, improper installation, or other causes. If such injuries or claims of injuries were to occur, we could incur monetary damages and our business could be adversely affected by any resulting negative publicity. The successful assertion of product liability claims against us could result in potentially significant monetary damages and, if our insurance protection is inadequate to cover these claims, could require us to make significant payments from our own resources.

We expect to face intense competition that could result in failing to gain market share and suffering reduced revenue from our portable power source products.

We plan to serve intensely competitive markets that are characterized by price erosion, rapid technological change, and competition from major domestic and international companies. This intense competition could result in pricing pressures, lower sales, reduced margins, and lower market share. Most of our competitors have greater market recognition, larger customer bases, and substantially greater financial, technical, marketing, distribution, and other resources than we possess and that afford them competitive advantages. As a result, they may be able to devote greater resources to the promotion and sale of products, to negotiate lower prices for raw materials and components, to deliver competitive products at lower prices, and to introduce new product solutions and respond to customer requirements more quickly than we can. Our competitive position could suffer if one or more of our customers decides not to utilize our portable power source products and instead contracts with our competitors or uses alternative technologies.

Our ability to compete successfully will depend on a number of factors, both within and outside our control. These factors include the following:

- our success in designing and introducing new portable power source products;
- our ability to predict the evolving needs of our customers and to assist them in incorporating our technologies into their new products;
- our ability to meet our customer's requirements for small size, low weight, peak power, long power duration, ease of use, reliability, durability, and small form factor;
- the quality of our customer services;
- the rate at which customers incorporate our products into their own products;
- product or technology introductions by our competitors; and
- foreign currency fluctuations, which may cause a foreign competitor's products to be priced significantly lower than our products.

We depend on key personnel who would be difficult to replace, and our business will likely be harmed if we lose their services or cannot hire additional qualified personnel.

Our success will depend substantially on the efforts and abilities of our senior management and key personnel. The competition for qualified management and key personnel, especially engineers, is intense. Although we maintain non-competition and non-disclosure covenants with most of our key personnel, we do not have employment agreements with most of them. The loss of services of one or more of our key employees or the inability to hire, train, and retain key personnel, especially engineers, technical support personnel, and capable sales and customer-support employees outside the United States, could delay the development and sale of our products, disrupt our business, and interfere with our ability to execute our business plan.

Our operating results may experience significant fluctuations.

In addition to the variability resulting from the short-term nature of our customers' commitments, other factors will contribute to significant periodic and seasonal quarterly fluctuations in our results of operations. These factors include the following:

- the cyclical nature of the markets we serve;
- the timing and size of orders;
- the volume of orders relative to our capacity;
- product introductions and market acceptance of new products or new generations of products;
- evolution in the life cycles of our customers' products;
- timing of expenses in anticipation of future orders;
- changes in product mix;
- availability of manufacturing and assembly services;
- changes in cost and availability of labor and components;
- timely delivery of product solutions to customers;
- pricing and availability of competitive products;
- introduction of new technologies into the markets we serve;
- pressures on reducing selling prices;
- our success in serving new markets; and
- changes in economic conditions.

Accordingly, you should not rely on period-to-period comparisons as an indicator of our future performance. Negative or unanticipated fluctuations in our operating results may result in a decline in the price of our stock.

Item 2: Properties

We lease office, manufacturing and research and development space in the following locations:

Location	Segment	Primary Use	Approximate Number of Square Feet	Lease Expiration
Albany, NY	Test and Measurement Instrumentation	Manufacturing, office and sales	17,424	2014
Albany, NY	New Energy	Corporate headquarters, office and research and development	20,000	2010
Shanghai, China	New Energy	Representative office	310	2010

We believe our facilities are generally well maintained and adequate for our current needs and for expansion, if required. We further believe that a lease renewal on reasonable terms for these properties may be achieved.

Item 3: Legal Proceedings

At any point in time, we may be involved in various lawsuits or other legal proceedings. Such lawsuits could arise from the sale of products or services or from other matters relating to its regular business activities, compliance with various governmental regulations and requirements, or other transactions or circumstances. We do not believe there are any such proceedings presently pending which could have a material adverse effect on our financial condition.

Item 4: Reserved

PART II

Item 5: Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Price Range of Common Stock

Our common stock is traded on the OTC Markets at PinkSheets.com under the symbol "MKTY.PK". The following table sets forth the high and low sale prices of our common stock as reported by Pink Sheets for the periods indicated (for periods prior to May 16, 2008, such prices have been derived by multiplying the actual prices by eight to reflect the reverse split of our common stock that was approved by our stockholders at a meeting held on May 15, 2008, pursuant to which every eight shares of our common stock were combined into one share of our common stock):

	High	Low
Fiscal Year Ended December 31, 2008		
First Quarter	\$ 7.44	\$ 3.77
Second Quarter	7.80	1.11
Third Quarter	5.50	.79
Fourth Quarter	1.93	.75
Fiscal Year Ended December 31, 2009		
First Quarter	\$ 1.87	\$.75
Second Quarter	1.00	.10
Third Quarter	1.90	.51
Fourth Quarter	1.54	.30

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Item 6: Selected Financial Data

The following table sets forth our summary consolidated financial data for the fiscal years ended December 31, 2007, 2008, and 2009 which was derived from our audited consolidated financial statements included elsewhere in this Annual Report on Form 10-K. We derived our summary consolidated financial data for the years ended December 31, 2005 and 2006 set forth in the following table from our audited consolidated financial statement not included in this report. You should read the following summary consolidated financial data together with the information under "Management's Discussion and Analysis of Financial Condition and Results of Operations" and our consolidated financial statements, including the related notes thereto.

(In thousands, except per share data)

	Years Ended December 31,				
	2005	2006	2007	2008	2009
Statement of Operations Data					
Product revenue	\$ 6,012	\$ 7,667	\$ 9,028	\$ 6,224	\$ 6,263
Funded research and development revenue	1,829	489	1,556	1,154	2,043
Gain (loss) on derivatives	(10,407)	182	2,967	655	(29)
Net gain (loss) on sale of securities available for sale	10,125	4,289	2,549	1,018	—
(Loss) income from continuing operations before income taxes, equity in holdings' losses and non controlling interest	(14,949)	(12,980)	(7,609)	(10,760)	(3,572)
Income tax (expense) benefit	(1,587)	(1,895)	(2,548)	(2,004)	208
Non controlling interests in losses of consolidated subsidiary	1,442	1,208	582	260	265
Net loss	(15,094)	(13,667)	(9,575)	(12,504)	(3,099)
Basic and Diluted (Loss) Earnings Per Share					
Loss from continuing operations	\$ (3.93)	\$ (3.46)	\$ (2.01)	\$ (2.62)	\$ (0.65)
Loss per share	\$ (3.93)	\$ (3.46)	\$ (2.01)	\$ (2.62)	\$ (0.65)
Balance Sheet Data (as of period end):					
Working capital	\$ 33,045	\$ 23,076	\$ 11,347	\$ 252	\$ 1,233
Securities available for sale	18,947	10,075	4,492	—	—
Total assets	41,267	33,811	18,716	5,511	3,741
Total long-term obligations	—	3,664	904	254	70
Total stockholders' equity (deficit) before noncontrolling interest	32,916	22,871	13,803	1,515	(1,135)

Item 7: Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion of our financial condition and results of operations should be read in conjunction with our Consolidated Financial Statements and the related notes included elsewhere in this Annual Report. This discussion contains forward-looking statements, which involve risk and uncertainties. Our actual results could differ materially from those anticipated in the forward-looking statements as a result of certain factors, including those discussed in Item 1A: "Risk Factors" and elsewhere in this Annual Report.

Overview

MTI operates in two segments, the New Energy segment conducted through MTI MicroFuel Cells, Inc. (MTI Micro) and the Test and Measurement Instrumentation segment, through MTI Instruments, Inc. (MTI Instruments).

New Energy Segment - MTI Micro is developing and commercializing off-the-grid power solutions for various portable electronic devices. Our patented proprietary direct methanol fuel cell technology platform called Mobion, converts 100% methanol fuel to usable electricity capable of providing continuous power as long as necessary fuel flows are maintained. Our proprietary fuel cell power solution consists of two primary components integrated in an easily manufactured device: the direct methanol fuel cell power engine, which we refer to as our Mobion Chip, and methanol fuel cartridges. Our current Mobion Chip weighs less than one ounce and is small enough to fit in the palm of one's hand. The methanol used by the technology is fully biodegradable. We have demonstrated power density of over 84 mW/cm², while producing more than 1,800 Wh/kg or 1.4 Wh/cc of fuel from its direct methanol fuel feed. For these reasons, we believe our technology offers a superior power solution compared to current lithium-ion and similar rechargeable battery systems currently used by original equipment manufacturers and branded partners, or OEMs, in many handheld electronic devices, such as smart phones, mobile phone accessories, digital cameras, portable gaming devices, e-readers and other portable devices. We believe our platform will facilitate further developments of numerous electronic product advantages, including smaller size, environmental friendliness, greatly extended run-time of current portable devices and simplicity of design, all critical for commercialization in the consumer market, and can be implemented as three different product options: a handheld power generator for consumer electronic devices, a snap-on or attached power accessory, or an embedded fuel cell in handheld devices. We have strategic agreements with a global Japanese consumer electronics company, with a U.S. based developer and marketer of universal chargers, with a global power tool manufacturer, and a letter of intent with Duracell, part of the Procter & Gamble Company. Our goal is to become the leading provider of portable power for various types of electronic devices and, assuming available financing, we intend to commercialize Mobion products in 2010.

Our Mobion technology is protected by a patent portfolio that includes 54 patents and 57 U.S. patent applications covering five key technologies and manufacturing areas, one of which is the process that eliminates the need for active water recirculation pumps or the inclusion of water as a fuel dilutant. The water required for the electrochemical process is transferred internally within the Mobion Chip from the site of water generation on the air-side of the cell. This internal flow of water takes place without the need for any pumps, complicated re-circulation loops or other micro-plumbing tools.

Test and Measurement Segment – MTI Instruments is a worldwide supplier of metrology, portable balancing equipment and inspection systems for semiconductor wafers. Our products use state-of-the-art technology to solve complex real world applications in numerous industries including automotive, semiconductor, solar cell manufacturing, commercial and military aviation and data storage. We are continuously working on ways to expand our sales reach, including more sales coverage in Europe and the Far East, as well as a focus on internet marketing. We have industry recognized customer service and have worked with hundreds of companies worldwide.

Our test and measurement segment has three product groups: general dimensional gauging, semiconductor/solar and aviation. Our products consist of electronic, computerized gauging instruments for position, displacement and vibration applications for the design, manufacturing and test markets; metrology tools for wafer characterization of semiconductor and solar wafers; and engine balancing and vibration analysis systems for both military and commercial aircraft.

Liquidity

Our cash requirements depend on numerous factors, including completion of our portable power source products development activities, our ability to commercialize our portable power source products, market acceptance of our portable power source products, and other factors.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Several key indicators of our liquidity are summarized in the following table:

(Dollars in thousands)	Years ended December 31,		
	2007	2008	2009
Cash and cash equivalents	\$ 7,650	\$ 1,662	\$ 785
Securities available for sale	4,492	—	—
Working capital	11,347	252	1,233
Net loss	(9,575)	(12,504)	(3,099)
Net cash used in operating activities	(11,683)	(10,346)	(2,170)
Purchase of property, plant and equipment	(414)	(181)	(7)

From inception through December 31, 2009, we have incurred an accumulated deficit of \$121 million, and we expect to incur losses for the foreseeable future as we continue micro fuel cell product development and commercialization programs. We expect that losses will fluctuate from year to year and that such fluctuations may be substantial as a result of, among other factors, operating results of our businesses.

At present, the Company does not expect to continue to provide equity funding for MTI Micro's development and commercialization of its portable power source products. MTI Micro had cash and cash equivalents as of December 31, 2009 of \$163 thousand. Subsequent to December 2009, MTI Micro collected outstanding receivable billings from the DOE of \$307 thousand.

On January 11, 2010, MTI Micro entered into a Common Stock and Warrant Purchase Agreement (the "Purchase Agreement") with Counter Point Ventures Fund II, L.P. ("Counter Point"). Counter Point is managed by Dr. Walter L. Robb, a member of the Board of Directors of the Company and MTI Micro, and is a current stockholder of MTI Micro. Dr. Robb and Counter Point beneficially held approximately 29.5% of the fully-diluted capital stock of MTI Micro of December 31, 2009, and as of March 15, 2010 hold an aggregate of approximately 30.7% of the fully-diluted capital stock of MTI Micro.

Pursuant to the Purchase Agreement, MTI Micro may issue and sell to Counter Point up to 28,571,429 shares of common stock, par value \$0.01 per share (the "Micro Common Stock"), at a purchase price per share of \$0.070, over a period of twelve (12) months, and warrants ("Warrants") to purchase shares of Micro Common Stock equal to 20% of the shares of Micro Common Stock purchased under the Purchase Agreement at an exercise price of \$0.070 per share. The sale and issuance of the Micro Common Stock and Warrants shall occur over multiple closings (each, a "Closing") occurring over two (2) one month closing periods and five (5) two-month closing periods (each, a "Closing Period"). Three Closings have occurred through March 15, 2010, with MTI Micro raising \$660,000 from the sale of 9,428,571 shares of Micro Common Stock and Warrants to purchase 1,885,714 shares of Micro Common Stock to Counter Point. Subsequent Closings may occur thereafter at MTI Micro's sole discretion during the Closing Periods upon delivery of written notice by MTI Micro to Counter Point of its desire to consummate a Closing, and Counter Point's acceptance of such offer under the Purchase Agreement on the terms agreed upon with MTI Micro. In the event the terms and conditions of the Purchase Agreement no longer reflect current market conditions or otherwise, either party may elect not to participate in a Subsequent Closing(s) or the parties may amend the Purchase Agreement on mutually agreeable terms with respect to such Subsequent Closing(s). If MTI Micro were to issue and sell the remainder of the 28,571,429 shares under the Purchase Agreement, the Company would continue to hold an aggregate of 55.8% of the fully-diluted capital stock of MTI Micro.

Additionally, MTI Micro has the remaining \$191 thousand for the DOE contract to bill as work is performed. However, the funds available through the Purchase Agreement are only available to us in increments of \$330 thousand bi-monthly. Our next available draw down is May 2010. MTI Micro will be required to raise additional funds through issuance of its equity or debt, government funding and/or explore other strategic alternatives including but not limited to the sale of assets and/or the company. If MTI Micro is unable to raise additional financing, it may be required to discontinue or severely reduce its business operations.

In order to conserve cash and extend operations while we pursue any additional necessary financing, we would be required to reduce operating expenses. There is no assurance that funds raised in any such a financing will be sufficient, that the financing will be available on terms favorable to us or to existing stockholders and at such times as required, or that we will be able to obtain the additional financing required for the continued operation and growth of our business. During the last sixteen months, MTI Micro has raised \$3.1 million in external debt and equity financing. If we raise additional funds by issuing equity securities, MTI Micro's stockholders will experience further dilution. Additional debt financing, if available, may involve restrictive covenants. Any debt financing or additional equity financing may contain terms that are not favorable to us or our stockholders. If we raise additional funds through collaboration and licensing arrangements with third parties, it may be necessary to relinquish some rights to our technologies or our products, or grant licenses on terms that are not favorable to us. If we are unable to raise adequate funds, we may have to liquidate some or all of our assets or delay, reduce the scope of or eliminate some or all of our research and development programs, or discontinue our portable power source business. Without other resources, management currently believes it will need to make significant changes to its operations during April 2010.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Management believes that MTI Instruments will continue to generate positive cash flow and would be able to fund its current operations. However, no assurances can be provided on this subsidiary's ability to continue as a going concern given the level of uncertainty involved with the parent company's operations.

Restructuring

In March 2007, the Company announced the suspension of MTI Micro's high power direct methanol fuel cell program in response to decreased funding and sales opportunities in the military market. In connection with this action, the Company accrued restructuring charges of \$344,000 pre-tax, consisting primarily of cash-based employee severance and benefit costs related to the reduction of 23 positions within its New Energy segment and Corporate staff. Restructuring expenses were classified as selling, general and administrative expenses within the Company's Consolidated Statements of Operations for the period. All amounts under this plan were settled by March 31, 2008.

In August 2008, the Board of Directors approved a restructuring plan (the "Restructuring"), which was designed to help the Company reduce expenses and preserve cash. As part of the Restructuring, a total of 29 positions across the Company and its subsidiaries were eliminated. The Company paid total severance and other benefit charges of approximately \$342,000 in connection with this plan by the end of the first quarter of 2009.

Results of Operations

Results of Operations for the Year Ended December 31, 2009 Compared to December 31, 2008.

Product Revenue: Product revenue in our test and measurement instrumentation business rose slightly from \$6.22 million in 2008 to \$6.26 million in 2009; an increase of less than 1%. As with the prior year, the U.S. Air Force remained the top customer for the segment, accounting for 19.0% of product revenue in 2009 and 15.6% in 2008. In addition, during 2009, a single U.S. based commercial customer accounted for 9.9% of total product revenue, versus 2008 when a single Japanese based commercial distributor accounted for 13.9% of total product revenue.

Information regarding government contracts included in product revenue is as follows:

(Dollars in thousands)	Contract(1)	Expiration	Revenue		Total Contract Orders Received	
			Year Ended		Revenue Contract	Total
			December 31,		to Date	to Date
			2008	2009	Dec. 31, 2009	Dec. 31, 2009
	\$2.3 million Air Force New PBS-4100 Systems	07/28/2010 (2)	\$ —	\$ 513	\$ 2,109	\$ 2,109
	\$8.8 million Air Force Retrofit and Maintenance of PBS-4100 Systems	06/19/2008 (3)	\$ 594	\$ 50	\$ 8,009	\$ 8,009
	\$6.5 million Air Force Retrofit and Maintenance of PBS-4100 Systems	09/27/2014 (4)	\$ —	\$ 439	\$ 439	\$ 439

- (1) Contract values represent maximum potential values and may not be representative of actual results.
- (2) Date represents expiration of contract, including all three potential option extensions.
- (3) The contract expiration date has passed, however, one delivery order remains open under the contract.
- (4) Date represents expiration of contract, including all four potential option extensions.

Funded Research and Development Revenue: Funded research and development revenue in our new energy segment increased by \$890 thousand, or 77%, to \$2.04 million for the year ended December 31, 2009 from \$1.15 million for the year ended December 31, 2008. The increase in revenue was primarily the result of the full year of recognition under the new DOE contract awarded in 2009 for the commercialization of our fuel cell product and an increase in our cost reimbursement rates, while in 2008, the DOE contract was for research and development costs.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

(Dollars in thousands)		Revenue Year Ended December 31, 2008	Revenue Year Ended December 31, 2009	Revenue Contract to Date
Contract	Expiration			
\$3.0 million DOE(2)	03/31/09	\$ 1,154	\$ -0-	\$ 3,000
\$2.4 million DOE(3)	03/31/10	-0-	2,043	2,043
Total		\$ 1,154	\$ 2,043	\$ 5,043

- (1) Dates represent expiration of contract, not date of final billing.
- (2) The DOE contract was a cost share contract. DOE funding for this contract was suspended during January 2006 and reinstated during May 2007. During 2007, we received notifications from the DOE of funding releases totaling \$1.0 million and also received an extension of the termination date for the contract from July 31, 2007 to September 30, 2008. During 2008, we received notification from the DOE of a funding release of \$325,000, and an extension of the termination date for the contract from September 30, 2008 to March 31, 2009.
- (3) The DOE contract is a cost share contract.

Cost of Product Revenue: Cost of product revenue in our test and measurement instrumentation business decreased by \$516,000, or 16.2%, to \$2.7 million during the year ended December 31, 2009 from \$3.2 million for the year ended December 31, 2008. As a percentage of product revenue, the annual cost of product revenue decreased eight percentage points (43% in 2009 compared to 51% in 2008). Margin improvements were attributed to a \$406,000 (33%) decrease in manufacturing overhead costs and a \$322,000 decrease in the annual inventory reserve expense. These were partially offset by a one percentage point drop in product margins due to the 2009 product mix.

Unfunded Research and Product Development Expenses: Unfunded research and product development decreased by \$4.5 million, or 76%, to \$1.3 million in 2009. Of this, the new energy segment decreased by \$3.8 million and the test and measurement instrumentation segment decreased by \$685 thousand from the prior year due to staff reductions and substantial cut backs in external development spending.

Selling, General and Administrative Expenses: Selling, general and administrative expenses decreased by \$5.1 million, or 40%, to \$3.3 million for the year ended December 31, 2009 from \$8.4 million for the year ended December 31, 2008. This decrease was primarily the result of (a) a \$1.5 million overall decrease in payroll costs due to staff reductions in 2008, with a full year impact in 2009, offset slightly by an increase in salary allocated to funded research and development (b) \$568,000 in corresponding decreases in benefit related costs, bonuses and commissions (c) a \$715,000 decrease in stock compensation related expenses (d) a \$531,000 decrease in legal fees (e) a \$329,000 decrease in travel expenditures (f) a decrease in \$300,000 for outside consultants and audit fees and (g) the decreases in general operating expenses representing management efforts to reduce expenditures due to decreases in funding sources.

Operating Loss: Operating loss for the year ended December 31, 2009 compared with the operating loss for the year ended December 31, 2008 decreased by \$9.35 million to \$3.1 million, a 76% decrease, as a result of the factors noted above.

Gain on Sale of Securities Available for Sale: During 2008, we sold 1,137,166 shares of Plug Power common stock at a weighted average price of \$2.67 per share, with gross proceeds to us of \$3.3 million. As of December 31, 2008, we no longer owned any Plug Power common stock or other securities available for sale.

Gain (loss) on Derivatives: We recorded a loss on derivative accounting of \$29 thousand for the year ended December 31, 2009 and a gain of \$655 thousand on derivative accounting for the year ended December 31, 2008. Both the 2009 loss and 2008 gain are the result of derivative treatment of the freestanding warrants issued to investors in conjunction with our December 2006 capital raise.

Income Tax (Expense) Benefit: Our income tax rate for the year ended December 31, 2009 was 6%, while the income tax rate for the year ended December 31, 2008 was (19%). These tax rates were primarily the result of losses generated by operations, changes in the valuation allowance, state true-ups upon tax return filings, permanent deductible differences for the derivative valuation, and disproportionate effects of reclassification of gains on Plug Power security sales included in operating loss.

The valuation allowance against our deferred tax assets at December 31, 2009 was \$26.4 million and at December 31, 2008 was \$27.9 million. We determined that it was more likely than not that the ultimate recognition of certain deferred tax assets would not be realized.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Results of Operations for the Year Ended December 31, 2008 Compared to December 31, 2007.

Product Revenue: Product revenue in our test and measurement instrumentation business for 2008 decreased by \$2.8 million, or 31.1%, to \$6.2 million for the fiscal year ended December 31, 2008 from \$9.0 million for the fiscal year ended December 31, 2007. The revenue decrease was primarily the result of a \$1.5 million decrease in general dimensional gauging sales from significantly lower sales to a Japanese OEM. Aviation sales also decreased \$1.4 million due to lower sales to the U.S. Air Force and commercial engine balancing system revenues decreased by \$0.3 million. These declines were partially offset by an increase in semiconductor/solar equipment sales of \$0.4 million.

In our test and measurement instrumentation business during 2008, the U.S. Air Force accounted for \$1.0 million, or 15.7%, of product revenue while during 2007, the U.S. Air Force accounted for \$2.4 million, or 26.3%, of product revenue. Additionally, during 2008, Koyo Precision, our Japanese distributor, represented \$0.9 million, or 13.9%, of product revenue while during 2007, Koyo Precision represented \$2.5 million, or 22.9%, of product revenue.

Information regarding government contracts included in product revenue is as follows:

(Dollars in thousands)		Revenue			Total
		Year Ended		Revenue	Contract
		December 31,		Contract to	Orders
				Date	Received
Contract(1)	Expiration	2007	2008	2008	to Date
				Dec. 31,	Dec. 31,
				2008	2008
\$2.3 million Air Force New PBS-4100 Systems	07/28/2010(2)	\$ 1,596	\$ 0	\$ 1,596	\$ 1,881
\$8.8 million Air Force Retrofit and Maintenance of PBS-4100 Systems	06/19/2008(3)	\$ 738	\$ 594	\$ 7,959	\$ 7,959

- (1) Contract values represent maximum potential values and may not be representative of actual results.
(2) Date represents expiration of contract, including all three potential option extensions.
(3) The contract expiration date has passed, however, three delivery orders remain open under the contract.

Funded Research and Development Revenue: Funded research and development revenue in our portable power, or new energy business decreased by \$0.4 million, or 25%, to \$1.2 million for the year ended December 31, 2008 from \$1.6 million for the year ended December 31, 2007. The decrease in revenue was primarily the result of the completion of the Samsung alliance, the SAFT contract and the NCMS contract in 2007. All revenues for 2008 were a result of reimbursement for research and development costs under the DOE contract with the final billing occurring in January of 2009. The DOE funding was suspended in 2006, and was reinstated during May 2007, thus only eight months of funding was recognized in 2007, or \$675,000. Revenue during 2007 also included \$418,000 from the SAFT contract, for which revenue recognition had been deferred until the delivery under the contract was accepted during the first quarter of 2007, revenue recognized under the Samsung alliance agreement of \$448,000 and revenue from the NCMS contract of \$15,000.

(Dollars in thousands)		Revenue Year	Revenue Year	Revenue
		Ended	Ended	Contract to
		December 31,	December 31,	Date
		2007	2008	Dec. 31, 2008
Contract	Expiration(
\$3.0 million DOE(2)	03/31/09	\$ 675	\$ 1,154	\$ 3,000
\$1.0 million Samsung(3)	07/31/07	448		875
\$418,000 SAFT(4)	12/31/06	418		418
\$15,000 NCMS(5)	06/30/07	15		15
Total		\$ 1,556	\$ 1,154	\$ 4,308

- (1) Dates represent expiration of contract, not date of final billing.
(2) The DOE contract was a cost share contract. DOE funding for this contract was suspended during January 2006 and reinstated during May 2007. During 2007, we received notifications from the DOE of funding releases totaling \$1.0 million and also received an extension of the termination date for the contract from July 31, 2007 to September 30, 2008. During 2008, we received notification from the DOE of a funding release of \$325,000, and an extension of the termination date for the contract from September 30, 2008 to March 31, 2009.
(3)

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

The Samsung contract was a research and prototype contract. This contract included one up-front payment of \$750,000 and two milestone payments of \$125,000 each for the delivery of prototypes. The contract was amended on October 22, 2007 as we agreed to issue a credit in the amount of the last invoice in recognition of our continuing collaboration with Samsung. Therefore, revenue under this contract totaled \$875,000.

- (4) The SAFT contract was a fixed price contract. This is a subcontract with SAFT under the U.S. Army CECOM contract. The purchase order received in connection with this subcontract was revised on November 14, 2006 eliminating one milestone. As a result, the contract value was reduced from \$470,000 to \$418,000 and the expiration date was extended from September 30, 2006 to December 31, 2006.
- (5) This contract was a cost plus catalyst research contract with the National Center for Manufacturing Sciences, or NCMS.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Cost of Product Revenue: Cost of product revenue in our test and measurement instrumentation business decreased by \$0.2 million, or 6%, to \$3.2 million during the year ended December 31, 2008 from \$3.4 million during the year ended December 31, 2007. The decrease primarily resulted from a change in product sales mix to a higher concentration of standard products, partially offset by higher inventory reserves for potentially obsolete inventory.

Gross profit as a percentage of product revenue decreased by 13.1% to 48.9% for the year ended December 31, 2008. The decrease resulted from a change in the product sales mix to a higher concentration of standard products which yielded a lower gross margin as well as the increase in inventory reserves for potentially obsolete inventory.

Funded Research and Product Development Expenses: Funded research and development expenses in our new energy business increased \$0.5 million, or 26%, to \$2.4 million for the year ended December 31, 2008 from \$1.9 million for the year ended December 31, 2007. This is a result of a full year of recognition of costs associated with the DOE contract, with reimbursement also increasing by \$0.5 million for 2008.

Unfunded Research and Product Development Expenses: Unfunded research and product development expenses decreased \$4.0 million, or 41%, to \$5.9 million for the year ended December 31, 2008 from \$9.9 million for the year ended December 31, 2007. This decrease is attributable to three factors (a) a \$0.5 million decrease in development costs that were related to the DOE contract that was in effect for the entire year, which relates to the increase in funded research and product development expenses, (b) the maturity of development of our principle product for the new energy business line and (c) continued cost reductions by management due to decreases in funding.

Selling, General and Administrative Expenses: Selling, general and administrative expenses decreased by \$0.3 million, or 4%, to \$8.4 million for the year ended December 31, 2008 from \$8.7 million for the year ended December 31, 2007. This decrease was primarily the result of (a) a \$756,000 decrease in payroll costs due to staff reductions in 2007, with a full year impact in 2008, and further layoffs in 2008 (b) \$605,000 in corresponding decreases in benefit related costs, bonuses and commissions (c) a \$715,000 decrease in stock compensation related expenses and (d) a \$583,000 decrease in general operating expenses representing management efforts to reduce expenditures due to decreases in funding sources. These decreases in expenditures were offset by increases in outside fees, including audit legal, and consulting fees of \$248,000 and a \$2,000,000 increase related to a decrease in allocations of expense from SG&A to funded and unfunded research and development costs for overhead and other costs allocable to research and development programs.

Operating Loss: Operating loss for the year ended December 31, 2008 compared with the operating loss for the year ended December 31, 2007 decreased by \$0.9 million to \$12.5 million, a 7% decrease, as a result of the factors noted above.

Gain on Sale of Securities Available for Sale: The gain on sale of securities available for sale for the year ended December 31, 2008 was \$1.0 million compared with a gain of \$2.5 million for the year ended December 31, 2007. During 2008, we sold 1,137,166 shares of Plug Power common stock at a weighted average price of \$2.67 per share, with gross proceeds to us of \$3.3 million. As of December 31, 2008, we no longer own any Plug Power common stock.

Gain (loss) on Derivatives: We recorded a gain on derivative accounting of \$0.7 million for the year ended December 31, 2008 and a gain of \$3.0 on derivative accounting for the year ended December 31, 2007. Both the 2008 and 2007 gains are the result of derivative treatment of the freestanding warrants issued to investors in conjunction with our December 2006 capital raise.

Income Tax (Expense) Benefit: Our income tax rate for the year ended December 31, 2008 was 19%, while the income tax rate for the year ended December 31, 2007 was 33%. These tax rates were primarily the result of losses generated by operations, changes in the valuation allowance, state true-ups upon tax return filings, permanent deductible differences for the derivative valuation, and disproportionate effects of reclassification of gains on Plug Power security sales included in operating loss.

The valuation allowance against our deferred tax assets at December 31, 2008 was \$27.9 million and at December 31, 2007 was \$22.3 million. We determined that it was more likely than not that the ultimate recognition of certain deferred tax assets would not be realized.

Liquidity and Capital Resources

We have incurred significant losses as we continue to fund the development and commercialization of our portable power source business. We expect that losses will fluctuate from year to year and that such fluctuations may be substantial as a result of, among other factors, our operating results, the availability of equity financing, including warrants issued in connection with the December 2006 capital raise, and the ability to attract government funding resources to offset research and development costs. As of December 31, 2009, we had an accumulated deficit of \$120.7 million. During the year ended December 31, 2009, our results of operations resulted in a net loss of \$3.1 million and cash used in operating activities totaling \$2.17 million. This cash use in 2009 was funded primarily by cash and cash equivalents on hand as of December 31, 2008 of \$1.7 million and results of operations of MTII.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

We expect to continue to incur losses during this global economic slowdown, and we expect to continue funding our operations from current cash and cash equivalents, proceeds, if any, from debt or equity financings and government funding. We expect to spend approximately \$1.1 million in research and development on MTI Instruments' products during 2010.

We have no other commitments for funding future needs of the organization at this time and financing during 2010 may not be available to us on acceptable terms, if at all. We may also seek to supplement our resources through additional debt or equity financings, sales of assets (including MTI Micro or MTI Instruments), and additional government funding.

Working capital was \$1.2 million at December 31, 2009, a \$1.0 million increase from \$.2 million at December 31, 2008. This increase was primarily the result of a continued hold on expenses and capital raised through the Bridge Note.

At December 31, 2009, the Company's order backlog was \$419 thousand, compared to \$1.3 million at December 31, 2008.

Our inventory turnover ratios and average accounts receivable days sales outstanding for the years ended December 31, 2008 and 2009 and their changes are as follows:

	Years Ended December 31,		
	2008	2009	Change
Inventory turnover	1.5	2.0	0.5
Average accounts receivable days sales outstanding	48	38	(10)

The increase in inventory turnover is driven by a 23% decrease in the average inventory balances on a comparable sales volume in 2008.

The decrease in average accounts receivable days sales outstanding in 2009 compared with 2008 was primarily attributable to our decision to grant our largest commercial customer 90-day payment terms during 2007. This customer accounted for 14% of our total product revenue in 2008. These extended payment terms were eliminated in conjunction with the expiration of our formal distribution agreement in September 2008 and the customer is now back to net 30 payment terms.

Cash flow used by operating activities was \$2.2 million during 2009 compared with \$10.3 million during 2008. This cash use decrease of \$8.1 million reflects a net decrease in cash expenditures to fund operations, together with net balance sheet changes which decreased cash expenditures by \$0.5 million, reflecting the timing of cash payments and receipts, particularly an increase in accounts receivable of \$0.7 million and a reduction of inventory of \$0.8 million.

Capital expenditures were \$7 thousand during 2009, a decrease of \$174 thousand from the prior year of \$181 thousand. This decrease was attributable to lower laboratory equipment expenditures to support our micro fuel cell business. Capital expenditures in 2009 included computer equipment for our Shanghai operations. We had no outstanding commitments for capital expenditures as of December 31, 2009.

During 2008, we sold our remaining 1,137,166 shares of Plug Power common stock with proceeds totaling \$3.0 million and gains totaling \$1.0 million. These proceeds reflect our previously announced strategy to raise additional capital through the sale of Plug Power stock to fund our micro fuel cell operations. We expect the net gains to be offset by our operating losses for purposes of computing taxable income. We estimate that as of December 31, 2009, our remaining net operating loss carryforwards were approximately \$65.4 million.

Off-Balance Sheet Arrangements

There were no off balance sheet arrangements.

Contractual Payment Obligations

We have entered into various agreements that result in contractual payment obligations in future years. These contracts include financing arrangements for current manufacturing, laboratory and office facility lease agreements. The following table summarizes cash payments that we are committed to make under the existing terms of contracts to which we are a party as of December 31, 2009. This table does not include contingencies.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Contractual Payment Obligations (in thousands)	Less Than 1 Year	1-3 Years	3-5 Years	More Than 5 Years	Total
Operating Leases / Total Contractual Payment Obligations	\$ 441	\$ 828	\$ 269	\$ —	\$ 1,538

Market Risk

Market risk is the risk that changes in market conditions will adversely affect earnings or cashflow. We categorize our market risks as interest rate risk and credit risk. Immediately below are detailed descriptions of the market risks and explanations as to how each of these risks are managed.

Interest Rate Risk. Interest rate risk is the risk that changes in interest rates could adversely affect earnings or cashflows. The Company's cash equivalents are sensitive to changes in interest rates. Interest rate changes would result in a change in interest income due to the difference between the current interest rates on cash. Interest rate risk sensitivity analysis is used to measure interest rate risk by computing estimated changes in cashflow as a result of assumed changes in market interest rates. A 10% decrease in 2009 interest rates would be immaterial to the Company's consolidated financial statements.

Credit Risk. Credit risk is the risk of loss we would incur if counterparties fail to perform their contractual obligations. Financial instruments that subject the Company to concentrations of credit risk principally consist of cash equivalents, marketable securities, trade accounts receivable and unbilled contract costs.

Our trade accounts receivable and unbilled contract costs and fees are primarily from sales to commercial customers, the U.S. government and state agencies. We do not require collateral and have not historically experienced significant credit losses related to receivables or unbilled contract costs and fees from individual customers or groups of customers in any particular industry or geographic area.

Our deposits are primarily in cash and investments in marketable securities, primarily deposited in commercial banks and investment companies. Credit exposure to any one entity is limited by Company policy.

Critical Accounting Policies and Significant Judgments and Estimates

The following discussion and analysis of our financial condition and results of operations is based upon our consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States of America. Note 2 to the consolidated audited financial statements includes a summary of our most significant accounting policies. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities, revenue, and expenses, and related disclosure of assets and liabilities. On an ongoing basis, we evaluate our estimates and judgments, including those related to revenue recognition, inventories, securities available for sale, income taxes, share-based compensation and derivatives. We base our estimates on historical experience and on various other factors that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates under different assumptions or conditions. Periodically, we review our critical accounting estimates with the Audit Committee of our Board of Directors.

The significant accounting policies that we believe are most critical to aid in fully understanding and evaluating our financial statements include the following:

Revenue Recognition. We recognize revenue from development contracts based upon the relationship of actual costs to estimated costs to complete the contract. These types of contracts typically provide development services to achieve a specific scientific result relating to direct methanol fuel cell technology. Some of these contracts require us to contribute to the development effort. The customers for these contracts are commercial customers and various state and federal government agencies. While government agencies are providing revenue, we do not expect the government to be a significant end user of the resulting products. Therefore, we do not reduce funded research and product development expense by the funding received. When it appears probable that estimated costs will exceed available funding on fixed price contracts and we are not successful in securing additional funding, we record the estimated additional expense before it is incurred.

We apply accounting guidance on Revenue Recognition in the evaluation of commercially funded fuel cell research and prototype agreements to determine when to properly recognize income. Payments received in connection with commercial research and prototype agreements are deferred and recognized on a straight-line basis over the term of the agreement for service-related payments.

For milestone and prototype delivery payments, if and when achieved, revenue is deferred and recognized on a straight-line basis over the remaining term of the agreement. When revenue qualifies for recognition it will be recorded as funded research and development revenue. The costs associated with research and prototype-producing activities are expensed as incurred. Expenses in an amount equal to revenue recognized are reclassified from unfunded research and product development to funded research and product development.

We recognize product revenue when there is persuasive evidence of an arrangement, delivery of the product to the customer or distributor has occurred, at which time title generally is passed to the customer or distributor, and we have determined that collection of a fixed fee is probable, all of which occur upon shipment of the product. If the product requires installation to be performed by us, all revenue related to the product is deferred and recognized upon the completion of the installation.

Inventory. Inventory is valued at the lower of cost or the current estimated market value of the inventory. We periodically review inventory quantities on hand and record a provision for excess or obsolete inventory based primarily on our estimated forecast of product demand, as well as based on historical usage. Demand and usage for products and materials can fluctuate significantly. A significant decrease in demand for our products could result in a short-term increase in the cost of inventory purchases and an increase of excess inventory quantities on hand. Therefore, although we make every effort to assure the accuracy of our forecasts of future product demand, any significant unanticipated changes in demand could have a significant impact on the value of our inventory and our reported operating results.

Share-Based Payments. We grant options to purchase our common stock and award restricted stock to our employees and directors under our equity incentive plans. The benefits provided under these plans are share-based payments subject to the appropriate accounting provisions regarding Share-Based Payments. Effective January 1, 2006, we use the fair value method of accounting with the modified prospective application, which provides for certain changes to the method for valuing share-based compensation. The valuation provisions apply to new awards and to awards that are outstanding on the effective date and subsequently modified. Under the modified prospective application, prior periods are not revised for comparative purposes. Share-based compensation expense recognized under these accounting methods for the year ended December 31, 2009 was \$0.5 million. At December 31, 2009, total unrecognized estimated compensation expense related to non-vested awards granted prior to that date was \$0.1 million, which is expected to be recognized over a weighted average period of 1.24 years.

We began estimating the value of share-based awards on the date of grant using a Black-Scholes option-pricing model effective January 1, 2006. Prior to this adoption, the value of each share-based award was estimated on the date of grant using the Black-Scholes model for the pro forma information required to be disclosed. The determination of the fair value of share-based payment awards on the date of grant using an option-pricing model is affected by our stock price as well as assumptions regarding a number of complex and subjective variables. These variables include our expected stock price volatility over the term of the awards, actual and projected employee stock option exercise behaviors, risk-free interest rate, and expected dividends.

If factors change and we employ different assumptions for the accounting methodology during future periods, the compensation expense that we record may differ significantly from what we have recorded in the current period. Therefore, we believe it is important for investors to be aware of the high degree of subjectivity involved when using option-pricing models to estimate share-based compensation. Option-pricing models were developed for use in estimating the value of traded options that have no vesting or hedging restrictions, are fully transferable and do not cause dilution. Because our share-based payments have characteristics significantly different from those of freely traded options, and because changes in the subjective input assumptions can materially affect our estimates of fair values, in our opinion, existing valuation models, including the Black-Scholes Option Pricing model, may not provide reliable measures of the fair values of our share-based compensation. Consequently, there is a risk that our estimates of the fair values of our share-based compensation awards on the grant dates may bear little resemblance to the intrinsic values realized upon the exercise, expiration, cancellation, or forfeiture of those share-based payments in the future. Certain share-based payments, such as employee stock options, may expire worthless or otherwise result in zero intrinsic value as compared to the fair values originally estimated on the grant date and expensed in our financial statements. Alternatively, value may be realized from these instruments that are significantly in excess of the fair values originally estimated on the grant date and expensed in our financial statements. There currently is neither a market-based mechanism nor other practical application to verify the reliability and accuracy of the estimates stemming from these valuation models, nor a way to compare and adjust the estimates to actual values. Although the fair value of employee share-based awards is determined using a qualified option-pricing model, that value may not be indicative of the fair value observed in a willing buyer/willing seller market transaction. Estimates of share-based compensation expenses are significant to our financial statements, but these expenses are based on the aforementioned option valuation model and will never result in the payment of cash by us.

Theoretical valuation models and market-based methods are evolving and may result in lower or higher fair value estimates for share-based compensation. The timing, readiness, adoption, general acceptance, reliability, and testing of these methods is uncertain. Sophisticated mathematical models may require voluminous historical information, modeling expertise, financial analyses, correlation analyses, integrated software and databases, consulting fees, customization, and testing for adequacy of internal controls.

For purposes of estimating the fair value of stock options granted during the twelve months ended December 31, 2009 using the Black-Scholes model, we used the historical volatility of our stock for the expected volatility assumption input to the Black-Scholes model, consistent with the proper accounting guidance. The risk-free interest rate is based on the risk-free zero-coupon rate for a period consistent with the expected option term at the time of grant. We do not currently pay nor do we anticipate paying dividends, but we are required to assume a dividend yield as an input to the Black-Scholes model. As such, we use a zero dividend rate. The expected option term is estimated using both historical term measures and projected termination estimates.

Income Taxes. As part of the process of preparing our consolidated financial statements, we are required to estimate our income taxes in each of the jurisdictions in which we operate. This process involves the estimation of our actual current tax exposure together with assessing temporary differences resulting from differing treatment of items for tax and accounting purposes. Included in this assessment is the determination of net operating loss carry forwards. These differences result in a net deferred tax asset. We must assess the likelihood that our deferred tax assets will be recovered from future taxable income and, to the extent that we believe that recovery is not likely, we must establish a valuation allowance.

Significant management judgment is required in determining our provision for income taxes, our deferred tax assets and liabilities, and any valuation allowance recorded against our net deferred tax assets. We have recorded a valuation allowance as a result of uncertainties in our ability to realize certain net deferred tax assets, primarily consisting of net operating losses being carried forward. In the event that actual results differ from these estimates or we adjust these estimates in future periods, we may need to adjust the recorded valuation allowance, which could materially impact our financial position and results of operations. We have recorded a full valuation allowance against our net deferred tax assets of \$26.4 million as of December 31, 2009.

During June 2006 accounting standards on Accounting for Uncertainty in Income Taxes were released, which became effective for us beginning in fiscal 2007. This methodology addresses the determination of how tax benefits claimed or expected to be claimed on a tax return should be recorded in the financial statements. Under this methodology, we must recognize the tax benefit from an uncertain tax position only if it is more likely than not that the tax position will be sustained on examination by the taxing authorities, based on the technical merits of the position. The tax benefits recognized in the financial statements from such a position are measured based on the largest benefit that has a greater than 50% likelihood of being realized upon ultimate resolution. The impact of our reassessment of our tax positions for these standards did not have a material impact on our results of operations, financial condition, or liquidity.

Derivative Instruments. We account for derivative instruments and embedded derivative instruments in accordance with the accounting standard for Accounting for Derivative Instruments and Hedging Activities, as amended. The amended standard requires an entity to recognize all derivatives as either assets or liabilities in the statement of financial position and measure these instruments at fair value. Fair value is estimated using the Black-Scholes Pricing model. We also follow accounting standards for the Accounting for Derivative Financial Instruments Indexed to and Potentially Settled in, a Company's Own Stock, which requires freestanding contracts that are settled in a company's own stock, including common stock warrants, to be designated as an equity instrument, asset or a liability. Under these provisions a contract designated as an asset or a liability must be carried at fair value, with any changes in fair value recorded in the results of operations. A contract designated as an equity instrument can be included in equity, with no fair value adjustments required.

The asset/liability derivatives are valued on a quarterly basis using the Black-Scholes Pricing model. Significant assumptions used in the valuation included exercise dates, closing prices for our common stock, volatility of our common stock, and a proxy risk-free interest rate. Gains (losses) on derivatives are included in "Gain (loss) on derivatives" in our consolidated statement of operations.

New Accounting Pronouncements

Effect of Recent Accounting Pronouncements:

In December 2007, the FASB revised the authoritative guidance for business combinations, which establishes that all business combinations are still required to be accounted for at fair value under the acquisition method of accounting but it changed the method of applying the acquisition method in a number of significant aspects. The guidance is effective on a prospective basis for all business combinations for which the acquisition date is on or after the beginning of the first annual period subsequent to December 15, 2008, with the exception of the accounting for valuation allowances on deferred taxes and acquired tax contingencies. Adjustments made to valuation allowances on deferred taxes and acquired tax contingencies associated with acquisitions that closed prior to the effective date of the policy would also apply the provisions of this policy. The Company's adoption of this guidance on January 1, 2009 did not have a material effect on its financial statements.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

In December 2007, the FASB issued authoritative guidance which establishes reporting standards that require companies to more clearly identify in the financial statements and disclose the impact of noncontrolling interests in a consolidated subsidiary on the consolidated financial statements. Noncontrolling interests are now classified as equity in the financial statements. The consolidated income statement is presented by requiring net income to include the net income for both the parent and the noncontrolling interests, with disclosure of both amounts on the consolidated statement of income. The calculation of earnings per share continues to be based on income amounts attributable to the parent. Prior period amounts related to noncontrolling interests have been reclassified to conform to the current period presentation. The Company adopted this guidance on January 1, 2009.

In March 2008, the FASB issued authoritative guidance regarding disclosures about derivative instruments and hedging activities, which requires enhanced disclosures about derivative instruments and is effective for fiscal periods beginning after November 15, 2008. This was effective for our Company on January 1, 2009. Other than the required disclosures, the adoption of new guidance had no impact on the Financial Statements.

In April 2008, the FASB issued authoritative guidance regarding the determination of the useful life of intangible assets. This guidance amends the factors that should be considered in developing renewal or extension assumptions used to determine the useful life of a recognized intangible asset and requires enhanced disclosures relating to: (a) the entity's accounting policy on the treatment of costs incurred to renew or extend the term of a recognized intangible asset; (b) in the period of acquisition or renewal, the weighted-average period prior to the next renewal or extension (both explicit and implicit), by major intangible asset class and (c) for an entity that capitalizes renewal or extension costs, the total amount of costs incurred in the period to renew or extend the term of a recognized intangible asset for each period for which a statement of financial position is presented, by major intangible asset class. The Company's adoption of this Standard on January 1, 2009 did not have a material effect on its financial statements.

In May 2008, the FASB issued authoritative guidance pertaining to the hierarchy of generally accepted accounting principles, which identifies the sources of accounting principles and the framework for selecting principles to be used in the preparation of financial statements of nongovernmental entities that are presented in conformity with generally accepted accounting principles in the United States. The FASB does not expect that this will result in a change in current practice. However, transition provisions have been provided in the unusual circumstance that the application of the provisions of this guidance results in a change in practice and is effective 60 days following the SEC's approval of the Public Company Accounting Oversight Board amendments to AU Section 411, "The Meaning of Present Fairly in Conformity With Generally Accepted Accounting Principles." The Company's adoption of this on January 1, 2009 did not have a material effect on its financial statements.

In May 2008, the FASB issued authoritative guidance for the accounting for convertible debt instruments that may be settled in cash upon conversion including partial cash settlement. This applies to convertible debt instruments that, by their stated terms, may be settled in cash (or other assets) upon conversion, including partial cash settlement, unless the embedded conversion option is required to be separately accounted for as a derivative. This also requires the issuer to separately account for the liability and equity components of convertible debt instruments in a manner that reflects the issuer's nonconvertible debt borrowing rate on the instrument's issuance date when interest cost is recognized. The Company's adoption of this Standard on January 1, 2009 did not have a material effect on its financial statements.

In June 2008, the FASB issued authoritative guidance to determine whether instruments granted in share-based payment transactions are participating securities. This guidance states that unvested share-based payment awards that contain nonforfeitable rights to dividends or dividend equivalents (whether paid or unpaid) are participating securities and shall be included in the computation of earnings per share pursuant to the two-class method. The Company's adoption of this Standard on January 1, 2009 did not have a material effect on its financial statements.

In April 2009, the FASB issued authoritative guidance which provides instruction for estimating fair value when the volume and level of activity for an asset or liability have significantly decreased in relation to normal market activity for the asset or liability, and for identifying circumstances that may indicate that a transaction is not orderly. Additionally, the guidance requires disclosure about fair value measurements in interim and annual reporting periods. The guidance is effective for interim and annual reporting periods ending after June 15, 2009. The Company's adoption of this Standard on January 1, 2009 did not have a material effect on its financial statements.

In April 2009, the FASB issued authoritative guidance on the timing of impairment recognition and greater clarity about the credit and noncredit components of impaired debt securities that are not expected to be sold. The guidance also requires additional disclosures about impairments in interim and annual reporting periods and was effective for interim and annual reporting periods ending after June 15, 2009. The Company's adoption of this Standard on January 1, 2009 did not have a material effect on its financial statements.

In June 2009, the FASB issued the FASB Accounting Standards Codification (Codification). The Codification became the single source of all authoritative GAAP recognized by FASB to be applied for financial statements issued for periods ending after September 15, 2009. The Codification did not change GAAP and did not have a material affect on our financial position, results of operations or liquidity.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

The Company is exposed to market risk from changes in interest rates and credit risk, which could affect its future results of operations and financial condition. We manage our exposure to these risks through regular operating and financing activities. (See “Market Risk”, included in Item 7, Management’s Discussion and Analysis of Financial Condition and Results of Operations above.)

Item 8: Financial Statements and Supplementary Data

The financial statements filed herewith are set forth on the Index to Consolidated Financial Statements on Page F-1 and are incorporated herein by reference.

Selected Quarterly Financial Data

Item 9: Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A: Controls and Procedures

(a) Evaluation of Disclosure Controls and Procedures

Evaluation of Disclosure Controls and Procedures: Our management, with the participation of our chief executive officer and acting chief financial officer, evaluated the effectiveness of MTI's disclosure controls and procedures as of December 31, 2009. The term "disclosure controls and procedures," as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act, means controls and other procedures of a company that are designed to ensure that information required to be disclosed by a company in the reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported, within the time periods specified in the SEC's rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by a company in the reports that it files or submits under the Exchange Act is accumulated and communicated to the company's management, including its principal executive and principal financial officers, as appropriate to allow timely decisions regarding required disclosure. We recognize that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving their objectives and we necessarily apply our judgment in evaluating the cost-benefit relationship of possible controls and procedures. Based on the valuation of our disclosure controls and procedures as of December 31, 2009, our chief executive officer and acting chief financial officer concluded that, as of such date, our disclosure controls and procedures were effective at the reasonable assurance level.

(b) Management's Report on Internal Control Over Financial Reporting

Management of our Company is responsible for establishing and maintaining adequate internal control over financial reporting, as that term is defined in Exchange Act Rules 13a-15(f) and 15d-15(f). Our internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Under the supervision and with the participation of our management, including the principal executive officer and principal financial officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting using the criteria set forth in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission. We determined that we had a material weakness in our internal control over financial reporting for the year ended December 31, 2008 because of staffing turnover in our finance area and lack of resources necessary to maintain effective controls. The Company has corrected this material weakness by retaining an outside consulting firm to provide controllership and chief financial officer related services. Additionally, on June 18, 2009, the Company appointed an Acting Chief Financial Officer. Based on our evaluation using the criteria set forth in Internal Control—Integrated Framework, Management has concluded that our internal control over financial reporting was effective as of December 31, 2009.

This annual report does not include an attestation report of our registered public accounting firm regarding internal control over financial reporting. Our report was not subject to attestation by our independent registered public accounting firm pursuant to temporary rules of the SEC that permit us to provide only Management's Report in this annual report.

/s/ Peng K. Lim
Chief Executive Officer
(Principal Executive Officer)

/s/ Frederick W. Jones
Acting Chief Financial Officer
(Principal Financial Officer)

(c) Changes in Internal Control over Financial Reporting

There have been no changes in our internal control over financial reporting, as such term is defined in Rules 13a-15(f) and 15d-15(1) under the Exchange Act, during our fiscal quarter ended December 31, 2009 that have materially affected, or are reasonable likely to materially affect our internal control over financial reporting.

Item 9B: Other Information

None.

PART III

Item 10: Directors, Executive Officers and Corporate Governance

(a) Directors

Incorporated herein by reference is the information appearing under the captions “Information about our Directors” and “Compliance with Section 16(a) of the Securities Exchange Act of 1934” in our definitive Proxy Statement for our 2010 Annual Meeting of Stockholders to be filed with the SEC.

(b) Executive Officers

Incorporated herein by reference is the information appearing under the captions “Executive Officers” and “Compliance with Section 16(a) of the Securities Exchange Act of 1934” in our definitive Proxy Statement for our 2010 Annual Meeting of Stockholders to be filed with the SEC.

Incorporated herein by reference is the information appearing under the caption “Board of Director Meetings and Committees – Audit Committee” in our definitive Proxy Statement for our 2010 Annual Meeting of Stockholders to be filed with the SEC.

Code of Ethics: We have adopted a Code of Ethics for employees, officers and directors. The Code of Ethics is intended to comply with Item 406 of Regulation S-K of the Securities Exchange Act of 1934. A copy may be obtained at no charge by written request to the attention of our Secretary at 431 New Karner Road, Albany, New York 12205. A copy of the Code of Ethics is also available on our website at <http://www.mechtech.com>.

Item 11: Executive Compensation

Incorporated herein by reference is the information appearing under the caption “Executive Compensation” in the Company’s definitive Proxy Statement for our 2010 Annual Meeting of Stockholders to be filed with the SEC.

Item 12: Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

Incorporated herein by reference is the information appearing under the caption “Principal Stockholders” in our definitive Proxy Statement for our 2010 Annual Meeting of Stockholders to be filed with the SEC.

Equity Compensation Plans

As of December 31, 2009, we have three equity compensation plans, each of which was originally approved by our stockholders; the Mechanical Technology, Incorporated 1996 Stock Incentive Plan (the “1996 Plan”), 1999 Employee Stock Incentive Plan (the “1999 Plan”) and 2006 Equity Incentive Plan (the “2006 Plan”). The 2006 plan was amended and approved by our Board of Directors in 2009. We refer collectively to these as the Plans. See Note 13 to the Consolidated Financial Statements referred to in Item 8 for a description of these Plans.

The following table presents information regarding these plans:

Plan Category	Number of Securities To Be Issued Upon Exercise of Outstanding Options, Warrants, Rights(1)	Weighted Average Exercise Price of Outstanding Options, Warrants, Rights	Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans (excluding securities reflected in column (a))
	(a)	(b)	(c)
Equity compensation plans approved by security holders	438,869	\$23.22	-0-
Equity compensation plans not approved by security holders	277,534	4.51	316,216

- (1) Under the 1996, 1999 and 2006 Plans, the securities available under the Plans for issuance and issuable pursuant to exercises of outstanding options may be adjusted in the event of a change in outstanding stock by reason of stock dividend, stock splits, reverse stock splits, etc.

Item 13: Certain Relationships and Related Transactions, and Director Independence

Incorporated herein by reference is the information appearing under the caption "Certain Relationships and Related Transactions" in our definitive Proxy Statement for the 2010 Annual Meeting of Stockholders to be filed with the SEC.

Item 14: Principal Accountant Fees and Services

Incorporated herein by reference is the information appearing under the caption "Independent Accountants" in our definitive Proxy Statement for the 2010 Annual Meeting of Stockholders to be filed with the Securities and Exchange Commission.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

PART IV

Item 15: Exhibits, Financial Statement Schedules

15(a) (1) Financial Statements: The financial statements filed herewith are set forth on the Index to Consolidated Financial Statements on page F-1 of the separate financial section which accompanies this Report, which is incorporated herein by reference.

15(a) (2) Financial Statement Schedules: The following consolidated financial statement schedule for the years ended December 31, 2007, 2008, and 2009 is included pursuant to Item 15(d):

Report of Independent Registered Public Accounting Firm on Financial Statements Schedule;
Schedule II - Valuation and Qualifying Accounts.

All other financial statement schedules not listed have been omitted because they are either not required, not applicable, or the information has been included elsewhere in the consolidated financial statements or notes thereto.

15(a) (3) Exhibits: The exhibits listed in the Exhibit Index immediately preceding the exhibits are filed as part of this Annual Report on Form 10-K.

The following exhibits are filed as part of this Report:

Exhibit Number	Description
3.1	Certificate of Incorporation of the registrant, as amended and restated. (17)
3.2	Certificate of Amendment of the Certificate of Incorporation of the registrant. (18)
3.3	By-Laws of the registrant, as amended and restated. (16)
4.1	Form of Common Stock Purchase Warrant to be issued by the Company. (13)
10.14	Mechanical Technology, Incorporated 1996 Stock Incentive Plan. (1)
10.30	Mechanical Technology, Incorporated 1999 Employee Stock Incentive Plan. (2)
10.38	Lease dated August 10, 1999 between Carl E. Touhey and Mechanical Technology, Inc. (3)
10.43	Lease dated April 2, 2001 between Kingfisher LLC and Mechanical Technology, Inc. (4)
10.44	First Amendment to lease dated March 13, 2003 between Kingfisher LLC and Mechanical Technology, Inc. (5)
10.132	Second Amendment to lease dated December 12, 2005 between Kingfisher, LLC and Mechanical Technology, Incorporated. (7)
10.139	Employment Agreement dated May 4, 2006 between Peng K. Lim and MTI MicroFuel Cells Inc (10) (amended and restated on December 31, 2008). (20)
10.140	Form of Restricted Stock Agreement for the 1996 and 1999 Mechanical Technology, Inc. Stock Incentive Plans. (11)
10.142	Third Amendment to lease dated August 7, 2006 between Kingfisher, LLC and Mechanical Technology, Incorporated. (12)
10.145	Mechanical Technology, Incorporated 2006 Equity Incentive Plan. (9)
10.147	Employment Agreement dated March 27, 2007 between Robert Kot and MTI Instruments, Inc (terminated January 2009). (14)
10.148	Fourth Amendment to lease dated August 6, 2007 between Kingfisher LLC and Mechanical Technology, Incorporated. (15)
10.151	

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Employment Agreement dated April 3, 2006 between James K. Prueitt and MTI MicroFuel Cells Inc (21) (amended and restated on December 31, 2008) (20).

10.152 Separation Agreement dated September 4, 2008 between Cynthia A. Scheuer and Mechanical Technology, Incorporated (19)

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

10.153	Form of Convertible Note and Warrant Purchase Agreement dated September 18, 2008 (19)
10.154	Amended and Restated Employment Agreement dated December 30, 2008 between James K. Prueitt and MTI MicroFuel Cells Inc. (20)
10.155	Amended and Restated Employment Agreement dated December 31, 2008 between Peng K. Lim and Mechanical Technology, Inc. (20)
10.156	Amendment to Employment Agreement dated March 27, 2007 between Robert Kot and MTI Instruments, Inc. (20)
10.157	Separation Agreement and Release Agreement dated January 16, 2009 between Robert Kot and MTI Instruments, Inc. (20)
10.158	Amendment No. 1 to Convertible Note and Warrant Purchase Agreement dated February 20, 2009 (20)
10.159	Letter Agreement dated February 24, 2009 between Peng K. Lim and Mechanical Technology, Inc. (20)
10.160	Letter Agreement dated February 24, 2009 between James K. Prueitt and MTI MicroFuel Cells Inc. (20)
10.161	Amendment No. 2 to Convertible Note and Warrant Purchase Agreement dated April 15, 2009 (21)
10.162	Secured Convertible Promissory Note Negotiated Conversion Agreement, dated December 9, 2009, by and among the Company, MTI Micro and the Bridge Investors (22)
10.163	Form of Common Stock Warrant (22)
10.164	Mechanical Technology, Incorporated Amended and Restated 2006 Equity Incentive Plan (23)
10.165	Fifth Amendment to lease dated August 6, 2007 between Kingfisher LLC and Mechanical Technology, Incorporated
10.166	Amendment No 1 to Lease Agreement Between Mechanical Technology Inc. and Carl E. Touhey
10.167	MTI MicroFuel Cells Inc. 2009 Stock Plan
14.1	Code of Ethics. (8)
21	Subsidiaries of the Registrant. (6)
23.1	Consent of Independent Registered Public Accounting Firm – PricewaterhouseCoopers LLP.
31.1	Certification of Chief Executive Officer Pursuant to Section 302 of the Sarbanes-Oxley Act of 2002
31.2	Certification of Acting Chief Financial Officer Pursuant to Section 302 of the Sarbanes-Oxley Act of 2002
32.1	Certification of Chief Executive Officer Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002
32.2	Certification of Acting Chief Financial Officer Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

Certain exhibits were previously filed (as indicated below) and are incorporated herein by reference. All other exhibits for which no other filing information is given are filed herewith:

- (1) Filed as Appendix A to the registrant's Definitive Proxy Statement Schedule 14A filed November 19, 1996.
- (2) Filed as an Exhibit to the registrant's Proxy Statement, Schedule 14A, dated February 13, 1999.
- (3) Filed as an Exhibit to the registrant's Form 10-K Report for the fiscal year ended September 30, 1999.

REPORT OF INDEPENDENT REGISTERED PUBLIC
ACCOUNTING FIRM ON FINANCIAL STATEMENT SCHEDULE

To the Board of Directors and Stockholders
of Mechanical Technology, Incorporated:

Our audits of the consolidated financial statements referred to in our report dated March 31, 2010 appearing on page F-2 of this Form 10-K of Mechanical Technology, Incorporated, also included an audit of the financial statement schedule listed in Item 15(a)(2) of this Form 10-K. In our opinion, this financial statement schedule presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of
Mechanical Technology, Incorporated:

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of operations, shareholders' equity and comprehensive loss, and of cash flows present fairly, in all material respects, the financial position of Mechanical Technology, Incorporated and its subsidiaries at December 31, 2009 and 2008, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2009 in conformity with accounting principles generally accepted in the United States of America. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits of these statements in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

As discussed in Note 2 to the consolidated financial statements, the Company changed the manner in which it accounts for noncontrolling interest in 2009.

The accompanying financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in Note 1 to the financial statements, the Company has suffered recurring losses from operations and has an accumulated deficit that raises substantial doubt about its ability to continue as a going concern. Management's plans in regard to these matters are also described in Note 1. The financial statements do not include any adjustments that might result from the outcome of this uncertainty.

MECHANICAL TECHNOLOGY, INCORPORATED AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

I. Nature of Operations

Description of Business

Mechanical Technology, Incorporated, (“MTI” or the “Company”), a New York corporation, was incorporated in 1961. MTI operates in two segments, the New Energy segment which is conducted through MTI MicroFuel Cells Inc. (“MTI Micro”), a majority-owned subsidiary, and the Test and Measurement Instrumentation segment, which is conducted through MTI Instruments, Inc. (“MTI Instruments”), a wholly-owned subsidiary.

MTI Micro was incorporated in Delaware on March 26, 2001, and is developing Mobion®, a handheld energy-generating device to replace current lithium-ion and similar rechargeable battery systems in many handheld electronic devices for the military and consumer markets. Mobion® handheld generators are based on direct methanol fuel cell (DFMC) technology, which has been recognized as enabling technology for advanced portable power sources by the scientific community and industry analysts. As the need for advancements in portable power increases, MTI Micro is developing Mobion® as a solution for advancing current and future electronic device power needs and addressing the multi-billion dollar portable electronics market. As of December 31, 2009, the Company owned approximately 61.81% of MTI Micro’s outstanding common stock.

MTI Instruments was incorporated in New York on March 8, 2000. MTI Instruments is a worldwide supplier of precision non-contact physical measurement solutions, condition based monitoring systems, portable balance equipment and wafer inspection tools. MTI Instrument’s products use a comprehensive array of technologies to solve complex, real world applications in numerous industries including manufacturing, semiconductor, solar, commercial and military aviation, automotive and data storage. Our products consist of electronic gauging instruments for position, displacement and vibration application within the design, manufacturing/production, test and research market; wafer characterization of semi-insulating and semi-conducting wafers within both the semiconductor and solar industries; and engine vibration analysis systems for both military and commercial aircraft.

Reverse Stock Split

Unless otherwise noted, all capital values, share, and per share amounts in the consolidated financial statements have been retroactively restated for the effects of the Company’s reverse split of its issued and outstanding common stock at a rate of 1-for-8 which became effective on May 16, 2008. This action was approved by stockholders on May 15, 2008.

Liquidity and Going Concern

The Company has incurred significant losses as it continued to fund the direct methanol fuel cell product development and commercialization programs of its majority owned subsidiary, MTI Micro, and had a consolidated accumulated deficit of \$120,725 thousand and working capital of \$1,233 thousand at December 31, 2009. Because of these losses, limited current cash and cash equivalents, negative cash flows and accumulated deficit, there is substantial doubt about the Company’s ability to continue as a going concern. These financial statements do not include any adjustments that might result from the outcome of this uncertainty.

At present, the Company does not expect to continue to fund MTI Micro on a long-term basis. The Company has projected positive cash flows to meet future cash requirements for operations and capital expenditures exclusive of MTI Micro, and has cash and cash equivalents of \$785 thousand at December 31, 2009. Management believes that MTI Instruments will continue to generate positive cash flows and be able to fund its current operations. However, no assurance can be provided regarding MTI and MTI Instrument’s ability to continue as a going concern given the level of uncertainty involved with the parent company’s operations.

Since the Company will no longer fund MTI Micro, the subsidiary has sought other sources of funding. In September 2008, MTI Micro closed on \$2.2 million of funding in the form of convertible secured notes (the “Bridge Notes”) to investors (the “Bridge Investors”), including MTI, Dr. Walter L. Robb, a member of the Company’s and MTI Micro’s Boards of Directors, and Counter Point Ventures Fund II, LP (Counter Point). Counter Point is a venture capital fund sponsored and managed by Dr. Walter L. Robb. General Electric Pension Trust, an employee benefit plan trust, is a passive limited partner in Counter Point. In February 2009, MTI Micro issued additional bridge notes to Counter Point in the amount of \$500,000. On April 15, 2009, MTI Micro, Counter Point and an additional investor agreed to additional bridge notes in the amount \$800,000 to be drawn down in increments not to exceed \$165,000 monthly. The final principal draw down occurred on December 4, 2009. The Bridge Notes carried an annual interest rate of 10%. On December 9, 2009, these bridge notes with the aggregate principal and accrued interest amount of \$3,910,510 outstanding were converted into an aggregate of 55,864,425 shares of Common Stock of MTI Micro using a conversion price per

share of \$0.070 (the "Negotiated Conversion"). See Note 17 for further discussion of this transaction.

F-7

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

On January 11, 2010, MTI Micro entered into a Common Stock and Warrant Purchase Agreement (the "Purchase Agreement") with Counter Point. Through March 11, 2010 \$660 thousand has been drawn against this agreement. See Note 20 for further discussion of this transaction.

On April 16, 2009, MTI Micro was awarded a cost share funding grant of \$2.4 million from the United States Department of Energy (DOE) as part of DOE's \$41.9 million in American Recovery and Reinvestment Act funding for fuel cell technology. As of February 22, 2010, \$2.2 million has been billed and paid by the DOE under this grant.

In order to continue full commercialization of its micro fuel cell solution, MTI Micro will need to do one or more of the following to raise additional resources, or reduce its cash requirements:

- obtain additional government or private funding of the Company's direct methanol fuel cell research, development, manufacturing readiness and commercialization;
- secure additional debt or equity financing; or
- further reduce its current expenditure run-rate.

There is no guarantee that resources will be available to MTI Micro on terms acceptable to it, or at all, or that such resources will be received in a timely manner, if at all, or that MTI Micro will be able to reduce its capital expenditure run-rate further without materially and adversely affecting its business. MTI Micro had cash and cash equivalents as of December 31, 2009 of \$163 thousand. Additionally, MTI Micro has \$1,340 thousand of available borrowing capacity through the Agreement, and the remaining \$191 thousand for the DOE contract as work is performed. However, the funds available through the Agreement are only available to us at increments of \$330 thousand bi-monthly. Our next available draw down is May, 2010. Without other resources, management currently believes it will need to make significant changes to its operations in the month of April of 2010.

2. Accounting Policies

Principles of Consolidation

The consolidated financial statements include the accounts of the Company and its majority-owned subsidiaries. All significant inter-company transactions are eliminated in consolidation.

Non-controlling interest in subsidiaries consists of equity securities issued by a subsidiary of the Company. The Company reflects the impact of the equity securities issuances in its investment in subsidiary and additional paid-in-capital accounts for the dilution or anti-dilution of its ownership interest in the subsidiary.

Use of Estimates

The preparation of the consolidated financial statements is in conformity with accounting principles generally accepted in the United States of America ("U.S. GAAP") which requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Fair Value of Financial Instruments

The Company's financial instruments consist of cash and cash equivalents, marketable securities, accounts receivable, unbilled contract costs and fees, derivatives and accounts payable. The estimated fair values of these financial instruments approximate their carrying values at December 31, 2008 and 2009. The estimated fair values have been determined through information obtained from market sources, where available, or Black-Scholes Option Pricing model valuations.

Accounting for Derivative Instruments

On January 1, 2009, the Company adopted a newly issued accounting standard regarding disclosure of derivative instruments. The Company recognizes all derivatives as either assets or liabilities in the statement of financial position and measures these instruments at fair value. The fair value of the derivative is recorded in the "Derivative liability" line on the financial statements, and is valued quarterly using the Black-Scholes Option Pricing Model. The Company also follows the accounting provisions for Accounting for Derivative Financial Instruments Indexed to and Potentially Settled in, a Company's Own Stock, which requires freestanding contracts that are settled in a company's own stock, including common stock warrants, to be designated as an equity instrument, asset or a liability. Under these provisions, a contract designated as an asset or

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

a liability must be carried at fair value, with any changes in fair value recorded in the results of operations. A contract designated as an equity instrument can be included in equity, with no fair value adjustments required. Based on the terms and conditions of the warrant of the Company, the instrument does not qualify to be designated as an equity instrument and is therefore recorded as a derivative liability.

F-8

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

The asset/liability derivatives are valued on a quarterly basis using the Black-Scholes Option Pricing model. Significant assumptions used in the valuation include exercise dates, closing market prices for the Company's common stock, volatility of the Company's common stock, and proxy risk-free interest rates. Gains (losses) on derivatives are included in "Gain (loss) on derivatives" in the Consolidated Statement of Operations.

Accounts Receivable and Allowance for Doubtful Accounts

Trade accounts receivable are recorded at the invoiced amount and do not bear interest. An allowance for doubtful accounts, if necessary, represents the Company's best estimate of the amount of probable credit losses in its existing accounts receivable. The Company determines the allowance based on historical write-off experience and current exposures identified. The Company reviews its allowance for doubtful accounts monthly. Past due balances over 90 days and over a specified amount are reviewed individually for collectability. All other balances are reviewed on a pooled basis by type of receivable. Account balances are charged off against the allowance when the Company believes it is probable the receivable will not be recovered. The Company does not have any off-balance-sheet credit exposure related to its customers.

Inventories

Inventories are valued at the lower of cost (first-in, first-out) or market. The Company provides estimated inventory allowances for excess, slow moving and obsolete inventory as well as inventory whose carrying value is in excess of net realizable value.

Property, Plant, and Equipment

Property, plant and equipment are stated at cost and depreciated using primarily the straight-line method over their estimated useful lives:

Leasehold improvements	Lesser of the life of the lease or the useful life of the improvement
Computers and related software	3 to 5 years
Machinery and equipment	3 to 10 years
Office furniture, equipment and fixtures	2 to 10 years

Significant additions or improvements extending assets' useful lives are capitalized; normal maintenance and repair costs are expensed as incurred. The costs of fully depreciated assets remaining in use are included in the respective asset and accumulated depreciation accounts. When items are sold or retired, related gains or losses are included in net (loss) income.

Income Taxes

The Company accounts for taxes in accordance under the asset and liability method of accounting for income taxes. Under this method, deferred income taxes are recognized for the tax consequences of "temporary differences" by applying enacted statutory tax rates applicable for future years to differences between financial statement and tax bases of existing assets and liabilities. Under the accounting standard, the effect of tax rate changes on deferred taxes is recognized in the income tax provision in the period that includes the enactment date. The provision for taxes is reduced by investment and other tax credits in the years such credits become available. A valuation allowance is recorded to reduce the carrying amounts of deferred tax assets unless it is more likely than not those assets will be realized.

Effective January 1, 2007, the Company adopted an accounting provision that contains a two-step approach to recognizing and measuring uncertain tax positions (tax contingencies). The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates it is more likely than not that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. The second step is to measure the tax benefit as the largest amount which is more than 50% likely of being realized upon ultimate settlement. The Company considers many factors when evaluating and estimating its tax positions and tax benefits, which may require periodic adjustments and which may not accurately forecast actual outcomes.

Revenue Recognition

The Company applies the accounting guidance for revenue recognition in the evaluation of its contracts to determine when to properly recognize revenue. The following outlines the various types of revenue and the determination of the recognition of income for each category:

Product Revenue

Product revenue is recognized when there is persuasive evidence of an arrangement, the collection of a fixed fee is probable or determinable, and delivery of the product to the customer or distributor has occurred, at which time title generally is passed to the customer or distributor. All of these generally occur upon shipment of the product. If the product requires installation to be performed by the Company, all revenue related to the product is deferred and recognized upon the completion of the installation. If the product requires specific customer acceptance, revenue is deferred until customer acceptance occurs or the acceptance provisions lapse, unless the Company can objectively and reliably demonstrate that the criteria specified in the acceptance provisions is satisfied.

MTI Instruments currently has distributor agreements in place for the international sale of general instrument and semiconductor products in certain global regions. Such agreements grant a distributor the right of first refusal to act as distributor for such products in the distributor's territory. In return, the distributor agrees to not market other products which are considered by MTI Instruments to be in direct competition with MTI Instruments' products. The distributor is allowed to purchase MTI Instruments' equipment at a price which is discounted off the published domestic/international list prices. Such list prices can be adjusted by MTI Instruments during the term of the distributor agreement, but MTI Instruments must provide advance notice at least 90 days before the price adjustment goes into effect. Generally, payment terms with the distributor are standard net 30 days; however, on occasion, extended payment terms have been granted. Title and risk of loss of the product passes to the distributor upon delivery to the independent carrier (standard "free-on-board" factory), and the distributor is responsible for any required training and/or service with the end-user. The sale (and subsequent payment) between MTI Instruments and the distributor is not contingent upon the successful resale of the product by the distributor. Distributor sales are covered by MTI Instruments' standard one-year warranty and there are no special return policies for distributors.

Some of MTI Instruments' direct sales, particularly sales of semi-automatic and fully-automated semiconductor metrology equipment, or rack-mounted vibration systems, involve on-site customer acceptance and/or installation. In those instances, revenue recognition does not take place at time of shipment. Instead, MTI Instruments recognizes the sale after the unit is installed and/or an on-site acceptance is given by the customer. Agreed-upon acceptance terms and conditions, if any, are negotiated at the time of purchase.

Funded Research and Development Revenue

The Company performs funded research and development for government agencies under both cost reimbursement and fixed-price contracts. Cost reimbursement contracts provide for the reimbursement of allowable costs. On fixed-price contracts, revenue is generally recognized on the percentage of completion method based upon the proportion of costs incurred to the total estimated costs for the contract. Revenue from reimbursement contracts is recognized as the services are performed. In each type of contract, the Company generally receives periodic progress payments or payments upon reaching interim milestones. When the current estimates of total contract revenue for commercial development contracts indicate a loss, a provision for the entire loss on the contract is recorded. Any losses incurred in performing funded research and development projects are recognized as research and development expense as incurred. When government agencies are providing funding they do not expect the government to be the only significant end user of the resulting products. These contracts do not require delivery of products that meet defined performance specifications, but are best efforts arrangements to achieve overall research and development objectives. Included in accounts receivable are billed and unbilled work-in-progress on contracts. Billings in excess of contract revenues earned are recorded as deferred revenue. While the Company's accounting for government contract costs is subject to audit by the sponsoring entity, in the opinion of management, no material adjustments are expected as a result of such audits. Adjustments are recognized in the period made.

Commercial Research and Prototype Agreement Income

The Company also applies the proper accounting guidance in the evaluation of commercially funded fuel cell research and prototype agreements in order to determine when to properly recognize income. Payments received in connection with commercial research and prototype agreements are deferred and recognized on a straight-line basis over the term of the agreement for service-related payments, and for milestone and prototype delivery payments, if and when achieved, revenue is deferred and recognized on a straight-line basis over the remaining term of the agreement. Under this policy, when revenue qualifies for recognition it will be recorded in the Consolidated Statements of Operations in the line "Funded research and development revenue." The costs associated with research and prototype-producing activities are expensed as incurred. Expenses in an amount equal to revenues recognized are reclassified from "Unfunded research and product development" to "Funded research and product development" in the Consolidated Statements of Operations.

Prototype Evaluation Agreements

The Company recognizes income derived from its micro fuel cell prototype evaluation agreements, where the Company receives a lump-sum amount from Original Equipment Manufacturers ("OEMs") which are testing the Company's Mobion prototypes for an OEM-specific application, upon delivery of the evaluation prototypes. These prototypes are returned to the Company once the evaluation period expires. There are no warranties given to any OEM regarding these prototypes, and each evaluation agreement is considered a customer specific arrangement. The costs associated with executing these prototype evaluation arrangements are expensed in research and development expense as they are incurred. Income derived from these arrangements of \$45 thousand in 2009 and \$23 thousand in 2008 are recorded in the Consolidated Statements of Operations in the line titled "Other income (expense), net."

Cost of Product Revenue

Cost of product revenue includes material, labor and overhead. Costs incurred in connection with funded research and development arrangements are included in funded research and product development expenses.

Deferred Revenue

Deferred revenue consists of payments received from customers in advance of services performed, completed installation or customer acceptance.

Warranty

The Company records a warranty reserve at the time product revenue is recorded based on a historical rate. The reserve is reviewed during the year and is adjusted, if appropriate, to reflect new product offerings or changes in experience. Actual warranty claims are tracked by product line. Warranty liability was \$21 thousand and \$31 thousand at December 31, 2009 and 2008, respectively.

Accounting for Impairment or Disposal of Long-Lived Assets

The Company accounts for impairment or disposal of long-lived assets in accordance with accounting standards that address the financial accounting and reporting for the impairment or disposal of long-lived assets, specify how impairment will be measured, and how impaired assets will be classified in the consolidated financial statements. On a quarterly basis, the Company analyzes the status of its long-lived assets at each subsidiary for potential impairment. As of December 31, 2009, the Company does not believe that any of its long-lived assets have suffered any type of impairment that would require an adjustment to that asset's recorded value.

Cash and Cash Equivalents

Cash and cash equivalents consist of cash and highly liquid short-term investments with original maturities of less than three months.

Net Loss per Common Share

The Company reports net loss per basic and diluted common share in accordance with the accounting standard, which establishes standards for computing and presenting loss per share. Basic loss per common share is computed by dividing net loss by the weighted average number of common shares outstanding during the reporting period. Diluted loss per share reflects the potential dilution, if any, computed by dividing loss income by the combination of dilutive common share equivalents, comprised of shares issuable under outstanding investment rights, warrants and the Company's share-based compensation plans, and the weighted average number of common shares outstanding during the reporting period. Dilutive common share equivalents include the dilutive effect of in-the-money stock options, which are calculated based on the average share price for each period using the treasury stock method. Under the treasury stock method, the exercise price of a stock option, the amount of compensation cost, if any, for future service that the Company has not yet recognized, and the amount of windfall tax benefits that would be recorded in additional paid-in capital, if any, when the stock option is exercised are assumed to be used to repurchase shares in the current period.

Share-Based Payments

The Company accounts for stock based awards exchanged for employee service in accordance with the stock-based payment accounting guidance. The Company has three share-based employee compensation plans and MTI Micro has two share-based employee compensation plans, all of which are described more fully in Note 13, Stock Based Compensation.

Stock-based compensation represents the cost related to stock-based awards granted to employees and directors. The Company measures stock-based compensation cost at grant date based on the estimated fair value of the award, and recognizes the cost as expense on a straight-line basis (net of estimated forfeitures) over the option's requisite service period. The Company estimates the fair value of stock-based awards using a Black Scholes valuation model. Stock-based compensation expense is recorded in "Selling, general and administrative expenses" and "Unfunded research and product development expenses" in the Consolidated Statements of Operations based on the employees' respective functions.

The Company records deferred tax assets for awards that potentially can result in deductions on the Company's income tax returns based on the amount of compensation cost recognized and the Company's statutory tax rate. Differences between the deferred tax assets recognized for financial reporting purposes and the actual tax deduction reported on the Company's income tax return are recorded in Additional Paid-In Capital (if the tax deduction exceeds the deferred tax asset) or in the Consolidated Statement of Operations (if the deferred tax asset exceeds the tax deduction and no historical pool of windfall tax benefits exists). Since the adoption of revised accounting standard on share-based payments, no tax benefits have been recognized related to share-based compensation since the Company has incurred net operating losses and has established a full valuation allowance to offset all potential tax benefits associated with these deferred tax assets. The Company continues to record the fair market value of stock options and warrants granted to non-employees and non-directors in exchange for services in accordance with the appropriate accounting guidance in the Consolidated Statements of Operations.

Concentration of Credit Risk

Financial instruments that subject the Company to concentrations of credit risk principally consist of cash equivalents, trade accounts receivable and unbilled contract costs. The Company's trade accounts receivable and unbilled contract costs and fees are primarily from sales to commercial customers, the U.S. government and state agencies. The Company does not require collateral and has not historically experienced significant credit losses related to receivables or unbilled contract costs and fees from individual customers or groups of customers in any particular industry or geographic area.

The Company deposits its cash in commercial banks. Credit exposure to any one entity is limited by Company policy.

Research and Development Costs

The Company expenses research and development costs as incurred.

Comprehensive Loss

Comprehensive loss includes net loss, as well as changes in stockholders' equity, other than those resulting from investments by stockholders.

Effect of Recent Accounting Pronouncements

In December 2007, the FASB revised the authoritative guidance for business combinations, which establishes that all business combinations are still required to be accounted for at fair value under the acquisition method of accounting but it changed the method of applying the acquisition method in a number of significant aspects. The guidance is effective on a prospective basis for all business combinations for which the acquisition date is on or after the beginning of the first annual period subsequent to December 15, 2008, with the exception of the accounting for valuation allowances on deferred taxes and acquired tax contingencies. Adjustments made to valuation allowances on deferred taxes and acquired tax contingencies associated with acquisitions that closed prior to the effective date of the policy would also apply the provisions of this policy. The Company's adoption of this guidance on January 1, 2009 did not have a material effect on its financial statements.

In December 2007, the FASB issued authoritative guidance which establishes reporting standards that require companies to more clearly identify in the financial statements and disclose the impact of noncontrolling interests in a consolidated subsidiary on the consolidated financial statements. Noncontrolling interests are now classified as equity in the financial statements. The consolidated income statement is presented by requiring net income to include the net income for both the parent and the noncontrolling interests, with disclosure of both amounts on the consolidated statement of income. The calculation of earnings per share continues to be based on income amounts attributable to the parent. Prior period amounts related to noncontrolling interests have been reclassified to conform to the current period presentation. The Company adopted this guidance on January 1, 2009.

In March 2008, the FASB issued authoritative guidance regarding disclosures about derivative instruments and hedging activities, which requires enhanced disclosures about derivative instruments and is effective for fiscal periods beginning after November 15, 2008. This was effective for our Company on January 1, 2009. Other than the required disclosures, the adoption of new guidance had no impact on the Financial Statements.

In April 2008, the FASB issued authoritative guidance regarding the determination of the useful life of intangible assets. This guidance amends the factors that should be considered in developing renewal or extension assumptions used to determine the useful life of a recognized intangible asset and requires enhanced disclosures relating to: (a) the entity's accounting policy on the treatment of costs incurred to renew or extend the term of a recognized intangible asset; (b) in the period of acquisition or renewal, the weighted-average period prior to the next renewal or extension (both explicit and implicit), by major intangible asset class and (c) for an entity that capitalizes renewal or extension costs, the total amount of costs incurred in the period to renew or extend the term of a recognized intangible asset for each period for which a statement of financial position is presented, by major intangible asset class. The Company's adoption of this Standard on January 1, 2009 did not have a material effect on its financial statements.

In May 2008, the FASB issued authoritative guidance pertaining to the hierarchy of generally accepted accounting principles, which identifies the sources of accounting principles and the framework for selecting principles to be used in the preparation of financial statements of nongovernmental entities that are presented in conformity with generally accepted accounting principles in the United States. The FASB does not expect that this will result in a change in current practice. However, transition provisions have been provided in the unusual circumstance that the application of the provisions of this guidance results in a change in practice and is effective 60 days following the SEC's approval of the Public Company Accounting Oversight Board amendments to AU Section 411, "The Meaning of Present Fairly in Conformity With Generally Accepted Accounting Principles." The Company's adoption of this on January 1, 2009 did not have a material effect on its financial statements.

In May 2008, the FASB issued authoritative guidance for the accounting for convertible debt instruments that may be settled in cash upon conversion including partial cash settlement. This applies to convertible debt instruments that, by their stated terms, may be settled in cash (or other assets) upon conversion, including partial cash settlement, unless the embedded conversion option is required to be separately accounted for as a derivative. This also requires the issuer to separately account for the liability and equity components of convertible debt instruments in a manner that reflects the issuer's nonconvertible debt borrowing rate on the instrument's issuance date when interest cost is recognized. The Company's adoption of this Standard on January 1, 2009 did not have a material effect on its financial statements.

In June 2008, the FASB issued authoritative guidance to determine whether instruments granted in share-based payment transactions are participating securities. This guidance states that unvested share-based payment awards that contain nonforfeitable rights to dividends or dividend equivalents (whether paid or unpaid) are participating securities and shall be included in the computation of earnings per share pursuant to the two-class method. The Company's adoption of this Standard on January 1, 2009 did not have a material effect on its financial statements.

In April 2009, the FASB issued authoritative guidance which provides instruction for estimating fair value when the volume and level of activity for an asset or liability have significantly decreased in relation to normal market activity for the asset or liability, and for identifying circumstances that may indicate that a transaction is not orderly. Additionally, the guidance requires disclosure about fair value measurements in interim and annual reporting periods. The guidance is effective for interim and annual reporting periods ending after June 15, 2009. The Company's adoption of this Standard on January 1, 2009 did not have a material effect on its financial statements.

In April 2009, the FASB issued authoritative guidance on the timing of impairment recognition and greater clarity about the credit and noncredit components of impaired debt securities that are not expected to be sold. The guidance also requires additional disclosures about impairments in interim and annual reporting periods and was effective for interim and annual reporting periods ending after June 15, 2009. The Company's adoption of this Standard on January 1, 2009 did not have a material effect on its financial statements.

In June 2009, the FASB issued the FASB Accounting Standards Codification (Codification). The Codification became the single source of all authoritative GAAP recognized by FASB to be applied for financial statements issued for periods ending after September 15, 2009. The Codification did not change GAAP and did not have a material affect on our financial position, results of operations or liquidity.

Edgar Filing: MECHANICAL TECHNOLOGY INC - Form 10-K

3. Accounts Receivable and Allowance for Doubtful Accounts

Receivables consist of the following at December 31:

	2008	2009
	(dollars in thousands)	
U.S. and State Government:		
Amount billable	\$ 102	\$ 143
Amount billed	4	—
Total U.S. and State Government	106	143
Commercial	434	1,091
Less: Allowance for doubtful accounts	—	(92)
Total	\$ 540	\$ 1,142

As of December 31, 2008 and 2009, the Company had a reserve for doubtful trade accounts receivable of \$0 and \$92 thousand, respectively.

4. Issuance of Stock by Subsidiary

MTI Micro was formed on March 26, 2001 and as of December 31, 2009 the Company owns approximately 61.81% of MTI Micro's outstanding common stock. The following table represents all MTI Micro common stock shares issued.

	Average Price	MTI Shares	Ownership %	NCI Shares	Ownership %	Total Shares
Balance at 1/1/2007		27,236,896	94.0	1,750,345	6.0	28,987,241
Stock issued for MTI Options to MFC Employees	\$ 0.69	44,960				44,960
Transfer of Plug Power securities to MFC	\$ 0.69	5,680,827				5,680,827
