Title of Each Class of Securities Offered	Maximum Aggregate Offering Price	Amount of Registration Fee⁽¹⁾
Medium-Term Notes, Series S, Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021	\$1,740,000	\$210.89

⁽¹⁾ The total filing fee of \$210.89 is calculated in accordance with Rule 457(r) of the Securities Act of 1933 (the "Securities Act") and will be paid by wire transfer within the time required by Rule 456(b) of the Securities Act.

PRICING SUPPLEMENT No. 173 dated November 16, 2018

(To Prospectus Supplement dated January 24, 2018

and Prospectus dated April 27, 2018)

Wells Fargo & Company

Medium-Term Notes, Series S

Equity Linked Securities

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

Linked to the **lowest performing** of the common stock of General Mills, Inc. and the common stock of Conagra Brands, Inc. (each referred to as an “Underlying Stock”)

Face amount of \$1,000 per security

Unlike ordinary debt securities, the securities do not provide for fixed payments of interest, do not repay a fixed amount of principal at stated maturity and are subject to potential automatic call prior to stated maturity upon the terms described below. Whether the securities pay a contingent coupon, whether the securities are automatically called prior to stated maturity and, if they are not automatically called, whether you receive the face amount of your securities at stated maturity will depend in each case on the stock closing price of the lowest performing Underlying Stock on the relevant calculation day. The lowest performing Underlying Stock on any calculation day is the Underlying Stock that has the lowest stock closing price on that calculation day as a percentage of its starting price **Contingent Coupon.** The securities will pay a contingent coupon on a quarterly basis until the earlier of stated maturity or automatic call if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the calculation day for that quarter is greater than or equal to its threshold price. However, if the stock closing price of the lowest performing Underlying Stock on a calculation day is less than its threshold price, you will not receive any contingent coupon for the relevant quarter. If the stock closing price of the lowest performing Underlying Stock is less than its threshold price on every calculation day, you will not receive any contingent coupons throughout the entire term of the securities. The contingent coupon rate is 9.50% per annum

Automatic Call. If the stock closing price of the lowest performing Underlying Stock on any of the quarterly calculation days from May 2019 to August 2021, inclusive, is greater than or equal to its starting price, we will automatically call the securities for the face amount plus a final contingent coupon payment

Potential Loss of Principal. If the securities are not automatically called prior to stated maturity, you will receive the face amount at stated maturity if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the final calculation day is greater than or equal to its threshold price. If the stock closing price of the lowest performing Underlying Stock on the final calculation day is less than its threshold price, you will lose more than 35%, and possibly all, of the face amount of your securities

The threshold price for each Underlying Stock is equal to 65% of its starting price

If the securities are not automatically called prior to stated maturity, you will have full downside exposure to the lowest performing Underlying Stock from its starting price if its stock closing price on the final calculation day is less than its threshold price, but you will not participate in any appreciation of either Underlying Stock and will not receive any dividends paid on either Underlying Stock

Your return on the face amount of the securities will depend **solely** on the performance of the Underlying Stock that is the lowest performing Underlying Stock on each calculation day. You will not benefit in any way from the

performance of the better performing Underlying Stock. Therefore, you will be adversely affected if **either Underlying Stock** performs poorly, even if the other Underlying Stock performs favorably

All payments on the securities are subject to the credit risk of Wells Fargo & Company, and you will have no ability to pursue either Underlying Stock for payment; if Wells Fargo & Company defaults on its obligations, you could lose some or all of your investment

No exchange listing; designed to be held to maturity

On the date of this pricing supplement, the estimated value of the securities is \$956.51 per security. The estimated value of the securities was determined for us by Wells Fargo Securities, LLC using its proprietary pricing models. It is not an indication of actual profit to us or to Wells Fargo Securities, LLC or any of our other affiliates, nor is it an indication of the price, if any, at which Wells Fargo Securities, LLC or any other person may be willing to buy the securities from you at any time after issuance. See “Investment Description” in this pricing supplement.

The securities have complex features and investing in the securities involves risks not associated with an investment in conventional debt securities. See “Risk Factors” herein on page PRS-11.

The securities are unsecured obligations of Wells Fargo & Company, and all payments on the securities are subject to the credit risk of Wells Fargo & Company. If Wells Fargo & Company defaults on its obligations, you could lose some or all of your investment. The securities are not deposits or other obligations of a depository institution and are not insured by the Federal Deposit Insurance Corporation, the Deposit Insurance Fund or any other governmental agency of the United States or any other jurisdiction.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this pricing supplement or the accompanying prospectus supplement and prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

Original Offering Price Agent Discount⁽¹⁾ Proceeds to Wells Fargo

Per Security	\$1,000.00	\$25.00	\$975.00
Total	\$1,740,000.00	\$43,500.00	\$1,696,500.00

Wells Fargo Securities, LLC, a wholly owned subsidiary of Wells Fargo & Company, is the agent for the ⁽¹⁾distribution of the securities and is acting as principal. See “Investment Description” in this pricing supplement for further information.

Wells Fargo Securities

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

Terms of the Securities

Market Measures: The common stock of General Mills, Inc. and the common stock of Conagra Brands, Inc. (each referred to as an “Underlying Stock,” and collectively as the “Underlying Stocks”). We refer to the issuer of each Underlying Stock as an “Underlying Stock Issuer” and collectively as the “Underlying Stock Issuers.”

Pricing Date: November 16, 2018.

Issue Date: November 21, 2018. (T+3)

Original Offering Price: \$1,000 per security.

Face Amount: \$1,000 per security. References in this pricing supplement to a “security” are to a security with a face amount of \$1,000.

Contingent Coupon Payment: On each contingent coupon payment date, you will receive a contingent coupon payment at a per annum rate equal to the contingent coupon rate if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the related calculation day is greater than or equal to its threshold price. Each “contingent coupon payment”, if any, will be calculated per security as follows: $(\$1,000 \times \text{contingent coupon rate})/4$. Any contingent coupon payment will be rounded to the nearest cent, with one-half cent rounded upward.

Contingent Coupon Payment Dates: **If the stock closing price of the lowest performing Underlying Stock on any calculation day is less than its threshold price, you will not receive any contingent coupon payment on the related contingent coupon payment date. If the stock closing price of the lowest performing Underlying Stock is less than its threshold price on all quarterly calculation days, you will not receive any contingent coupon payments over the term of the securities.** Quarterly, on the third business day following each calculation day (as each such calculation day may be postponed pursuant to “—Postponement of a Calculation Day” below, if applicable), provided that the contingent coupon payment date with respect to the final calculation day will be the stated maturity date. If a calculation day is postponed with respect to one or both Underlying Stocks, the related contingent coupon payment date will be three business days after the last calculation day as postponed. If a contingent coupon payment date is postponed, the contingent coupon payment, if any, due on that contingent coupon payment date will be made on that contingent coupon payment date as so postponed with the same force and effect as if it had been made on the originally scheduled contingent coupon payment date, that is, with no additional amount accruing or payable as a result of the postponement.

Contingent Coupon Rate: The “contingent coupon rate” is 9.50% per annum.

Automatic Call: If the stock closing price of the lowest performing Underlying Stock on any of the quarterly calculation day from May 2019 to August 2021, inclusive, is greater than or equal to its starting price, the securities will be automatically called, and on the related call settlement date you will be entitled to receive a cash payment per security in U.S. dollars equal to the face amount per security plus a final contingent coupon payment. The securities will not be subject to automatic call until the second quarterly calculation day, which is approximately six months after the issue date.

If the securities are automatically called, they will cease to be outstanding on the related call settlement date and you will have no further rights under the securities after such call settlement date. You will not receive any notice from us if the securities are automatically called.

Calculation Days: Quarterly, on the 16th day of each February, May, August and November, commencing February 2019 and ending August 2021, and the final calculation day, each subject to postponement as described below under “—Postponement of a Calculation Day.” We refer to November 16, 2021 as the “final calculation day.”

Call Settlement Date: Three business days after the applicable calculation day (as such calculation day may be postponed pursuant to “—Postponement of a Calculation Day” below, if applicable). If a calculation day is postponed with respect to one or both Underlying Stocks, the related call settlement date will be three business days after the last calculation day as postponed.

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

November 19, 2021. If the final calculation day is postponed, the stated maturity date will be the later of (i) November 19, 2021 and (ii) three business days after the last final calculation day as

Stated Maturity postponed. See “—Postponement of a Calculation Day” below. If the stated maturity date is not a business day, the payment to be made on the stated maturity date will be made on the next

Date: succeeding business day with the same force and effect as if it had been made on the stated maturity date. The securities are not subject to repayment at the option of any holder of the securities prior to the stated maturity date.

If the securities are not automatically called prior to the stated maturity date, you will be entitled to receive on the stated maturity date a cash payment per security in U.S. dollars equal to the maturity payment amount (in addition to the final contingent coupon payment, if any). The “maturity payment amount” per security will equal:

•

if the ending price of the lowest performing Underlying Stock on the final calculation day is greater than or equal to its threshold price: \$1,000; or

•

if the ending price of the lowest performing Underlying Stock on the final calculation day is less than its threshold price:

**Maturity
Payment
Amount:**

\$1,000 × performance factor of the lowest performing Underlying Stock on the final calculation day
If the securities are not automatically called prior to stated maturity and the ending price of the lowest performing Underlying Stock on the final calculation day is less than its threshold price, you will lose more than 35%, and possibly all, of the face amount of your securities at stated maturity.

Any return on the face amount of the securities will be limited to the sum of your contingent coupon payments, if any. You will not participate in any appreciation of either Underlying Stock, but you will have full downside exposure to the lowest performing Underlying Stock on the final calculation day if the ending price of that Underlying Stock is less than its threshold price.

All calculations with respect to the maturity payment amount will be rounded to the nearest one hundred-thousandth, with five one-millionths rounded upward (e.g., 0.000005 would be rounded to 0.00001); and the maturity payment amount will be rounded to the nearest cent, with one-half cent rounded upward.

**Lowest
Performing
Underlying
Stock:**

For any calculation day, the “lowest performing Underlying Stock” will be the Underlying Stock with the lowest performance factor on that calculation day (as such calculation day may be postponed for one or both Underlying Stocks pursuant to “—Postponement of a Calculation Day” below, if applicable).

**Performance
Factor:**

With respect to an Underlying Stock on any calculation day, its stock closing price on such calculation day *divided by* its starting price (expressed as a percentage).

**Stock Closing
Price:**

The “stock closing price” with respect to each Underlying Stock on a calculation day, means the product of the closing price of such Underlying Stock and the adjustment factor for such Underlying Stock, each on such calculation day.

Adjustment Factor: The “adjustment factor” for each Underlying Stock is initially 1.0. The adjustment factor for each Underlying Stock will remain constant for the term of the securities, subject to adjustment for certain corporate events relating to the applicable Underlying Stock Issuer as described in the section entitled “Additional Terms of the Securities—Adjustment Events” below.
With respect to the common stock of General Mills, Inc.: \$44.18, its stock closing price on the pricing date.

Starting Price: With respect to the common stock of Conagra Brands, Inc.: \$33.07, its stock closing price on the pricing date.

PRS-3

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

- Ending Price:** The “ending price” of an Underlying Stock will be its stock closing price on the final calculation day.
- Threshold** With respect to the common stock of General Mills, Inc.: \$28.717, which is equal to 65% of its starting price.
- Price:** With respect to the common stock of Conagra Brands, Inc.: \$21.4955, which is equal to 65% of its starting price.
- If any calculation day is not a trading day with respect to either Underlying Stock, such calculation day for each Underlying Stock will be postponed to the next succeeding day that is a trading day with respect to each Underlying Stock. A calculation day for an Underlying Stock is also subject to postponement due to the occurrence of a market disruption event with respect to such Underlying Stock on such calculation day. See “Additional Terms of the Securities—Market Disruption Events.”
- Postponement of a Calculation Day:**
- Calculation Agent:** Wells Fargo Securities, LLC
- No Listing:** The securities will not be listed on any securities exchange or automated quotation system.
- Material Tax Consequences:** For a discussion of the material U.S. federal income and certain estate tax consequences of the ownership and disposition of the securities, see “United States Federal Tax Considerations.”
- Wells Fargo Securities, LLC, a wholly owned subsidiary of Wells Fargo & Company. The agent may resell the securities to other securities dealers at the original offering price of the securities less a concession not in excess of \$25.00 per security.
- Agent:** The agent or another affiliate of ours expects to realize hedging profits projected by its proprietary pricing models to the extent it assumes the risks inherent in hedging our obligations under the securities. If any dealer participating in the distribution of the securities or any of its affiliates conducts hedging activities for us in connection with the securities, that dealer or its affiliate will expect to realize a profit projected by its proprietary pricing models from such hedging activities. Any such projected profit will be in addition to any discount or concession received in connection with the sale of the securities to you.
- Denominations:** \$1,000 and any integral multiple of \$1,000.
- CUSIP:** 95001BAX2

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

Investment Description

The Principal at Risk Securities Linked to the Lowest Performing of the common stock of General Mills, Inc. and the common stock of Conagra Brands, Inc. due November 19, 2021 (the “securities”) are senior unsecured debt securities of Wells Fargo that do not provide for fixed payments of interest, do not repay a fixed amount of principal at stated maturity and are subject to potential automatic call upon the terms described in this pricing supplement. Whether the securities pay a quarterly contingent coupon, whether the securities are automatically called prior to stated maturity and, if they are not automatically called, whether you receive the face amount of your securities at stated maturity will depend in each case upon the stock closing price of the **lowest performing Underlying Stock** on the relevant calculation day. The lowest performing Underlying Stock on any calculation day is the Underlying Stock that has the lowest stock closing price on that calculation day as a percentage of its starting price. The securities provide:

- quarterly contingent coupon payments at a rate of 9.50% per annum until the earlier of stated maturity or automatic
- (i) call if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the applicable quarterly calculation day is greater than or equal to 65% of its starting price;
 - the possibility of an automatic early call of the securities for an amount equal to the face amount plus a final
- (ii) contingent coupon payment if the stock closing price of the lowest performing Underlying Stock on any of the quarterly calculation days from May 2019 to August 2021, inclusive, is greater than or equal to its starting price;
 - and
 - (iii) if the securities are not automatically called prior to stated maturity, either:
 - (a) payment of the face amount at maturity if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the final calculation day has not declined by more than 35% from its starting price; or
 - (b) full exposure to the decline in the price of the lowest performing Underlying Stock on the final calculation day from its starting price if the lowest performing Underlying Stock has declined by more than 35% from its starting price.

If the stock closing price of the lowest performing Underlying Stock on any quarterly calculation day is less than 65% of its starting price, you will not receive any contingent coupon payment for that quarter. If the securities are not automatically called prior to stated maturity and the stock closing price of the lowest performing Underlying Stock on the final calculation day has declined by more than 35% from its starting price, you will lose more than 35%, and possibly all, of the face amount of your securities at stated maturity. Accordingly, you will not receive any protection if the stock closing price of the lowest performing Underlying Stock on the final calculation day has declined by more than 35% from its starting price.

Any return on the face amount of the securities will be limited to the sum of your contingent coupon payments, if any. You will not participate in any appreciation of either Underlying Stock, but you will be fully exposed to the decline in the lowest performing Underlying Stock on the final calculation day if the securities are not automatically called prior to stated maturity and the stock closing price of the lowest performing Underlying Stock on the final calculation day has declined by more than 35% from its starting price.

All payments on the securities are subject to the credit risk of Wells Fargo.

Your return on the face amount of the securities will depend solely on the performance of the Underlying Stock that is the lowest performing Underlying Stock on each calculation day. You will not benefit in any way from the performance of the better performing Underlying Stock. Therefore, you will be adversely affected if either Underlying Stock performs poorly, even if the other Underlying Stock performs favorably.

The securities are riskier than alternative investments linked to only one of the Underlying Stocks or linked to a basket composed of both Underlying Stocks. Unlike those alternative investments, the securities will be subject to the full risks of both Underlying Stocks, with no offsetting benefit from the better performing Underlying Stock. The securities are designed for investors who understand and are willing to bear this additional risk in exchange for the potential contingent coupon payments that the securities offer. Because the securities may be adversely affected by poor performance by either Underlying Stock, you should not invest in the securities unless you understand and are willing to accept the full downside risks of both Underlying Stocks.

PRS-5

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

You should read this pricing supplement together with the prospectus supplement dated January 24, 2018 and the prospectus dated April 27, 2018 for additional information about the securities. When you read the accompanying prospectus supplement, please note that all references in such supplement to the prospectus dated November 3, 2017, or to any sections therein, should refer instead to the accompanying prospectus dated April 27, 2018 or to the corresponding sections of such prospectus, as applicable. Information included in this pricing supplement supersedes information in the prospectus supplement and prospectus to the extent it is different from that information. Certain defined terms used but not defined herein have the meanings set forth in the prospectus supplement.

You may access the prospectus supplement and prospectus on the SEC website www.sec.gov as follows (or if such address has changed, by reviewing our filing for the relevant date on the SEC website):

- Prospectus Supplement dated January 24, 2018:
<https://www.sec.gov/Archives/edgar/data/72971/000119312518018256/d466041d424b2.htm>

- Prospectus dated April 27, 2018:
<https://www.sec.gov/Archives/edgar/data/72971/000119312518136909/d557983d424b2.htm>

The original offering price of each security includes certain costs that are borne by you. Because of these costs, the estimated value of the securities on the pricing date is less than the original offering price. The costs included in the original offering price relate to selling, structuring, hedging and issuing the securities, as well as to our funding considerations for debt of this type.

The costs related to selling, structuring, hedging and issuing the securities include (i) the agent discount (if any), (ii) the projected profit that our hedge counterparty (which may be one of our affiliates) expects to realize for assuming risks inherent in hedging our obligations under the securities and (iii) hedging and other costs relating to the offering of the securities.

Our funding considerations take into account the higher issuance, operational and ongoing management costs of market-linked debt such as the securities as compared to our conventional debt of the same maturity, as well as our liquidity needs and preferences. Our funding considerations are reflected in the fact that we determine the economic terms of the securities based on an assumed funding rate that is generally lower than the interest rates implied by secondary market prices for our debt obligations and/or by other traded instruments referencing our debt obligations, which we refer to as our “secondary market rates.” As discussed below, our secondary market rates are used in determining the estimated value of the securities.

If the costs relating to selling, structuring, hedging and issuing the securities were lower, or if the assumed funding rate we use to determine the economic terms of the securities were higher, the economic terms of the securities would be more favorable to you and the estimated value would be higher. The estimated value of the securities as of the pricing date is set forth on the cover page of this pricing supplement.

Determining the estimated value

Our affiliate, Wells Fargo Securities, LLC (“WFS”), calculated the estimated value of the securities set forth on the cover page of this pricing supplement based on its proprietary pricing models. Based on these pricing models and related market inputs and assumptions referred to in this section below, WFS determined an estimated value for the

securities by estimating the value of the combination of hypothetical financial instruments that would replicate the payout on the securities, which combination consists of a non-interest bearing, fixed-income bond (the “debt component”) and one or more derivative instruments underlying the economic terms of the securities (the “derivative component”).

The estimated value of the debt component is based on a reference interest rate, determined by WFS as of a recent date, that generally tracks our secondary market rates. Because WFS does not continuously calculate our reference interest rate, the reference interest rate used in the calculation of the estimated value of the debt component may be higher or lower than our secondary market rates at the time of that calculation. As noted above, we determine the economic terms of the securities based upon an assumed funding rate that is generally lower than our secondary market rates. In contrast, in determining the estimated value of the securities, we value the debt component using a reference interest rate that generally tracks our secondary market rates. Because the reference interest rate is generally higher than the assumed funding rate, using the reference interest rate to value the debt component generally results in a lower estimated value for the debt component, which we believe more closely approximates a market valuation of the debt component than if we had used the assumed funding rate.

WFS calculated the estimated value of the derivative component based on a proprietary derivative-pricing model, which generated a theoretical price for the derivative instruments that constitute the derivative component based on various inputs, including the “derivative component factors” identified in “Risk Factors—The Value Of The Securities Prior To Stated Maturity Will Be Affected By Numerous Factors, Some Of Which Are Related In Complex Ways.” These inputs may be market-observable or may be based on assumptions made by WFS in its discretion.

PRS-6

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

The estimated value of the securities determined by WFS is subject to important limitations. See “Risk Factors—The Estimated Value Of The Securities Is Determined By Our Affiliate’s Pricing Models, Which May Differ From Those Of Other Dealers” and “—Our Economic Interests And Those Of Any Dealer Participating In The Offering Are Potentially Adverse To Your Interests.”

Valuation of the securities after issuance

The estimated value of the securities is not an indication of the price, if any, at which WFS or any other person may be willing to buy the securities from you in the secondary market. The price, if any, at which WFS or any of its affiliates may purchase the securities in the secondary market will be based upon WFS’s proprietary pricing models and will fluctuate over the term of the securities due to changes in market conditions and other relevant factors. However, absent changes in these market conditions and other relevant factors, except as otherwise described in the following paragraph, any secondary market price will be lower than the estimated value on the pricing date because the secondary market price will be reduced by a bid-offer spread, which may vary depending on the aggregate face amount of the securities to be purchased in the secondary market transaction, and the expected cost of unwinding any related hedging transactions. Accordingly, unless market conditions and other relevant factors change significantly in your favor, any secondary market price for the securities is likely to be less than the original offering price.

If WFS or any of its affiliates makes a secondary market in the securities at any time up to the issue date or during the 3-month period following the issue date, the secondary market price offered by WFS or any of its affiliates will be increased by an amount reflecting a portion of the costs associated with selling, structuring, hedging and issuing the securities that are included in the original offering price. Because this portion of the costs is not fully deducted upon issuance, any secondary market price offered by WFS or any of its affiliates during this period will be higher than it would be if it were based solely on WFS’s proprietary pricing models less the bid-offer spread and hedging unwind costs described above. The amount of this increase in the secondary market price will decline steadily to zero over this 3-month period. If you hold the securities through an account at WFS or any of its affiliates, we expect that this increase will also be reflected in the value indicated for the securities on your brokerage account statement.

If WFS or any of its affiliates makes a secondary market in the securities, WFS expects to provide those secondary market prices to any unaffiliated broker-dealers through which the securities are held and to commercial pricing vendors. If you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, that broker-dealer may obtain market prices for the securities from WFS (directly or indirectly), but could also obtain such market prices from other sources, and may be willing to purchase the securities at any given time at a price that differs from the price at which WFS or any of its affiliates is willing to purchase the securities. As a result, if you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, the value of the securities on your brokerage account statement may be different than if you held your securities at WFS or any of its affiliates.

The securities will not be listed or displayed on any securities exchange or any automated quotation system. Although WFS and/or its affiliates may buy the securities from investors, they are not obligated to do so and are not required to make a market for the securities. There can be no assurance that a secondary market will develop.

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

**Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021
Investor Considerations**

We have designed the securities for investors who:

seek an investment with contingent quarterly coupon payments at a rate of 9.50% per annum until the earlier of stated maturity or automatic call, if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the applicable quarterly calculation day is greater than or equal to 65% of its starting price;

understand that if the stock closing price of the lowest performing Underlying Stock on the final calculation day has declined by more than 35% from its starting price, they will be fully exposed to the decline in the lowest performing Underlying Stock from its starting price and will lose more than 35%, and possibly all, of the face amount at stated maturity;

are willing to accept the risk that they may not receive any contingent coupon payment on one or more, or any, quarterly contingent coupon payment dates over the term of the securities;

understand that the securities may be automatically called prior to stated maturity and that the term of the securities may be as short as approximately six months;

understand that the return on the face amount of the securities will depend solely on the performance of the Underlying Stock that is the lowest performing Underlying Stock on each calculation day and that they will not benefit in any way from the performance of the better performing Underlying Stock;

understand that the securities are riskier than alternative investments linked to only one of the Underlying Stocks or linked to a basket composed of both Underlying Stocks;

understand and are willing to accept the full downside risks of both Underlying Stocks;

are willing to forgo participation in any appreciation of either Underlying Stock and dividends on either Underlying Stock; and

are willing to hold the securities to maturity.

The securities are not designed for, and may not be a suitable investment for, investors who:

seek a liquid investment or are unable or unwilling to hold the securities to maturity;

require full payment of the face amount of the securities at stated maturity;

seek a security with a fixed term;

are unwilling to purchase securities with an estimated value as of the pricing date that is lower than the original offering price, as set forth on the cover page;

are unwilling to accept the risk that the stock closing price of the lowest performing Underlying Stock on the final calculation day may decline by more than 35% from its starting price;

seek certainty of current income over the term of the securities;

seek exposure to the upside performance of either or both Underlying Stocks;

seek exposure to a basket composed of both Underlying Stocks or a similar investment in which the overall return is based on a blend of the performances of the Underlying Stocks, rather than solely on the lowest performing Underlying Stock;

are unwilling to accept the risk of exposure to the Underlying Stocks;

are unwilling to accept the credit risk of Wells Fargo; or

prefer the lower risk of conventional fixed income investments with comparable maturities issued by companies with comparable credit ratings.

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

Determining Payment On A Contingent Coupon Payment Date and at Maturity

If the securities have not been previously automatically called, on each quarterly contingent coupon payment date, you will either receive a contingent coupon payment or you will not receive a contingent coupon payment, depending on the stock closing price of the lowest performing Underlying Stock on the related quarterly calculation day.

Step 1: Determine which Underlying Stock is the lowest performing Underlying Stock on the relevant calculation day. The lowest performing Underlying Stock on any calculation day is the Underlying Stock with the lowest performance factor on that calculation day. The performance factor of an Underlying Stock on a calculation day is its stock closing price on that calculation day as a percentage of its starting price (i.e., its stock closing price on that calculation day *divided by* its starting price).

Step 2: Determine whether a contingent coupon is paid on the applicable contingent coupon payment date based on the stock closing price of the lowest performing Underlying Stock on the relevant calculation day, as follows:

On the stated maturity date, if the securities have not been automatically called prior to the stated maturity date, you will receive (in addition to the final contingent coupon payment, if any) a cash payment per security (the maturity payment amount) calculated as follows:

Step 1: Determine which Underlying Stock is the lowest performing Underlying Stock on the final calculation day. The lowest performing Underlying Stock on the final calculation day is the Underlying Stock with the lowest performance factor on the final calculation day. The performance factor of an Underlying Stock on the final calculation day is its ending price as a percentage of its starting price (i.e., its ending price *divided by* its starting price).

Step 2: Calculate the maturity payment amount based on the ending price of the lowest performing Underlying Stock, as follows:

Hypothetical Payout Profile

The following profile illustrates the potential maturity payment amount on the securities (excluding the final contingent coupon payment, if any) for a range of hypothetical performances of the lowest performing Underlying Stock on the final calculation day from its starting price to its ending price, assuming the securities have not been automatically called prior to the stated maturity date. This graph has been prepared for purposes of illustration only. Your actual return will depend on the actual ending price of the lowest performing Underlying Stock on the final calculation day and whether you hold your securities to stated maturity. The performance of the better performing Underlying Stock is not relevant to your return on the securities.

Risk Factors

The securities have complex features and investing in the securities will involve risks not associated with an investment in conventional debt securities. You should carefully consider the risk factors set forth below as well as the other information contained in this pricing supplement and the accompanying prospectus supplement and prospectus, including the documents they incorporate by reference. As described in more detail below, the value of the securities may vary considerably before the stated maturity date due to events that are difficult to predict and are beyond our control. You should reach an investment decision only after you have carefully considered with your advisors the suitability of an investment in the securities in light of your particular circumstances.

If The Securities Are Not Automatically Called Prior to Stated Maturity, You May Lose Some Or All Of The Face Amount Of Your Securities At Stated Maturity.

We will not repay you a fixed amount on your securities at stated maturity. If the securities are not automatically called prior to stated maturity, you will receive a maturity payment amount that will be equal to or less than the face amount per security, depending on the ending price of the lowest performing Underlying Stock on the final calculation day.

If the ending price of the lowest performing Underlying Stock on the final calculation day is less than its threshold price, the maturity payment amount will be reduced by an amount equal to the decline in the price of the lowest performing Underlying Stock from its starting price (expressed as a percentage of its starting price). The threshold price for each Underlying Stock is 65% of its starting price. For example, if the securities are not automatically called and the lowest performing Underlying Stock on the final calculation day has declined by 35.1% from its starting price to its ending price, you will not receive any benefit of the contingent downside protection feature and you will lose 35.1% of the face amount per security. As a result, you will not receive any protection if the price of the lowest performing Underlying Stock on the final calculation day declines significantly and you may lose some, and possibly all, of the face amount per security at stated maturity, even if the price of the lowest performing Underlying Stock is greater than or equal to its starting price or its threshold price at certain times during the term of the securities.

Even if the ending price of the lowest performing Underlying Stock on the final calculation day is greater than its threshold price, the maturity payment amount will not exceed the face amount, and your yield on the securities, taking into account any contingent coupon payments you may have received during the term of the securities, may be less than the yield you would earn if you bought a traditional interest-bearing debt security of Wells Fargo or another issuer with a similar credit rating.

The Securities Do Not Provide For Fixed Payments Of Interest And You May Receive No Coupon Payments On One Or More Quarterly Contingent Coupon Payment Dates, Or Even Throughout The Entire Term Of The Securities.

On each quarterly contingent coupon payment date you will receive a contingent coupon payment if, **and only if**, the stock closing price of the lowest performing Underlying Stock on the related calculation day is greater than or equal to its threshold price. If the stock closing price of the lowest performing Underlying Stock on any calculation day is less than its threshold price, you will not receive any contingent coupon payment on the related contingent coupon payment date, and if the stock closing price of the lowest performing Underlying Stock is less than its threshold price on each calculation day over the term of the securities, you will not receive any contingent coupon payments over the entire term of the securities.

The Securities Are Subject To The Full Risks Of Both Underlying Stocks And Will Be Negatively Affected If Either Underlying Stock Performs Poorly, Even If The Other Underlying Stock Performs Favorably.

You are subject to the full risks of both Underlying Stocks. If either Underlying Stock performs poorly, you will be negatively affected, even if the other Underlying Stock performs favorably. The securities are not linked to a basket composed of the Underlying Stocks, where the better performance of one Underlying Stock could offset the poor performance of the other Underlying Stock. Instead, you are subject to the full risks of whichever Underlying Stock is the lowest performing Underlying Stock on each calculation day. As a result, the securities are riskier than an alternative investment linked to only one of the Underlying Stocks or linked to a basket composed of both Underlying Stocks. You should not invest in the securities unless you understand and are willing to accept the full downside risks of both Underlying Stocks.

Your Return On The Securities Will Depend Solely On The Performance Of The Underlying Stock That Is The Lowest Performing Underlying Stock On Each Calculation Day, And You Will Not Benefit In Any Way From The Performance Of The Better Performing Underlying Stock.

Your return on the face amount of the securities will depend solely on the performance of the Underlying Stock that is the lowest performing Underlying Stock on each calculation day. Although it is necessary for both Underlying Stocks to close above their respective threshold prices on the relevant calculation day in order for you to receive a quarterly contingent coupon payment and for you to receive the face amount of your securities at maturity, you will not benefit in any way from the performance of the better performing Underlying Stock. The securities may underperform an alternative investment linked to a basket composed of the Underlying Stocks, since in such case the performance of the better performing Underlying Stock would be blended with the performance of the lowest performing Underlying Stock, resulting in a better return than the return of the lowest performing Underlying Stock alone.

PRS-11

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

You Will Be Subject To Risks Resulting From The Relationship Between The Underlying Stocks.

It is preferable from your perspective for the Underlying Stocks to be correlated with each other so that their prices will tend to increase or decrease at similar times and by similar magnitudes. By investing in the securities, you assume the risk that the Underlying Stocks will not exhibit this relationship. The less correlated the Underlying Stocks, the more likely it is that either one of the Underlying Stocks will be performing poorly at any time over the term of the securities. All that is necessary for the securities to perform poorly is for one of the Underlying Stocks to perform poorly; the performance of the better performing Underlying Stock is not relevant to your return on the securities. It is impossible to predict what the relationship between the Underlying Stocks will be over the term of the securities.

You May Be Fully Exposed To The Decline In The Lowest Performing Underlying Stock On The Final Calculation Day From Its Starting Price, But Will Not Participate In Any Positive Performance Of Either Underlying Stock.

Even though you will be fully exposed to a decline in the price of the lowest performing Underlying Stock on the final calculation day if its ending price is below its threshold price, you will not participate in any increase in the price of either Underlying Stock over the term of the securities. Your maximum possible return on the securities will be limited to the sum of the contingent coupon payments you receive, if any. Consequently, your return on the securities may be significantly less than the return you could achieve on an alternative investment that provides for participation in an increase in the price of either or both of the Underlying Stocks.

Higher Contingent Coupon Rates Are Associated With Greater Risk.

The securities offer contingent coupon payments at a higher rate, if paid, than the fixed rate we would pay on conventional debt securities of the same maturity. These higher potential contingent coupon payments are associated with greater levels of expected risk as of the pricing date as compared to conventional debt securities, including the risk that you may not receive a contingent coupon payment on one or more, or any, contingent coupon payment dates and the risk that you may lose a substantial portion, and possibly all, of the face amount per security at maturity. The volatility of the Underlying Stocks and the correlation between the Underlying Stocks are important factors affecting this risk. Volatility is a measurement of the size and frequency of daily fluctuations in the price of an Underlying Stock, typically observed over a specified period of time. Volatility can be measured in a variety of ways, including on a historical basis or on an expected basis as implied by option prices in the market. Correlation is a measurement of the extent to which the prices of the Underlying Stocks tend to fluctuate at the same time, in the same direction and in similar magnitudes. Greater expected volatility of the Underlying Stocks or lower expected correlation between the Underlying Stocks as of the pricing date may result in a higher contingent coupon rate, but it also represents a greater expected likelihood as of the pricing date that the stock closing price of at least one Underlying Stock will be less than its threshold price on one or more calculation days, such that you will not receive one or more, or any, contingent coupon payments during the term of the securities, and that the stock closing price of at least one Underlying Stock will be less than its threshold price on the final calculation day such that you will lose a substantial portion, and possibly all, of the face amount per security at maturity. In general, the higher the contingent coupon rate is relative to the fixed rate we would pay on conventional debt securities, the greater the expected risk that you will not receive one or more, or any, contingent coupon payments during the term of the securities and that you will lose a substantial portion, and possibly all, of the face amount per security at maturity.

You Will Be Subject To Reinvestment Risk.

If your securities are automatically called, the term of the securities may be reduced to as short as approximately six months. There is no guarantee that you would be able to reinvest the proceeds from an investment in the securities at a comparable return for a similar level of risk in the event the securities are automatically called prior to maturity.

The Securities Are Subject To The Credit Risk Of Wells Fargo.

The securities are our obligations and are not, either directly or indirectly, an obligation of any third party. Any amounts payable under the securities are subject to our creditworthiness, and you will have no ability to pursue either Underlying Stock for payment. As a result, our actual and perceived creditworthiness may affect the value of the securities and, in the event we were to default on our obligations, you may not receive any amounts owed to you under the terms of the securities.

Holders Of The Securities Have Limited Rights Of Acceleration.

Payment of principal on the securities may be accelerated only in the case of payment defaults that continue for a period of 30 days or certain events of bankruptcy or insolvency, whether voluntary or involuntary. If you purchase the securities, you will have no right to accelerate the payment of principal on the securities if we fail in the performance of any of our obligations under the securities, other than the obligations to pay principal and interest on the securities. See “Description of Notes—Events of Default and Covenant Breaches” in the accompanying prospectus supplement.

Holders Of The Securities Could Be At Greater Risk For Being Structurally Subordinated If We Convey, Transfer Or Lease All Or Substantially All Of Our Assets To One Or More Of Our Subsidiaries.

Under the indenture, we may convey, transfer or lease all or substantially all of our assets to one or more of our subsidiaries. In that event, third-party creditors of our subsidiaries would have additional assets from which to recover on their claims while holders of the

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

securities would be structurally subordinated to creditors of our subsidiaries with respect to such assets. See “Description of Notes—Consolidation, Merger or Sale” in the accompanying prospectus supplement.

The Estimated Value Of The Securities On The Pricing Date, Based On WFS’s Proprietary Pricing Models, Is Less Than The Original Offering Price.

The original offering price of the securities includes certain costs that are borne by you. Because of these costs, the estimated value of the securities on the pricing date is less than the original offering price. The costs included in the original offering price relate to selling, structuring, hedging and issuing the securities, as well as to our funding considerations for debt of this type. The costs related to selling, structuring, hedging and issuing the securities include (i) the agent discount (if any), (ii) the projected profit that our hedge counterparty (which may be one of our affiliates) expects to realize for assuming risks inherent in hedging our obligations under the securities and (iii) hedging and other costs relating to the offering of the securities. Our funding considerations are reflected in the fact that we determine the economic terms of the securities based on an assumed funding rate that is generally lower than our secondary market rates. If the costs relating to selling, structuring, hedging and issuing the securities were lower, or if the assumed funding rate we use to determine the economic terms of the securities were higher, the economic terms of the securities would be more favorable to you and the estimated value would be higher.

The Estimated Value Of The Securities Is Determined By Our Affiliate’s Pricing Models, Which May Differ From Those Of Other Dealers.

The estimated value of the securities was determined for us by WFS using its proprietary pricing models and related market inputs and assumptions referred to above under “Investment Description—Determining the estimated value.” Certain inputs to these models may be determined by WFS in its discretion. WFS’s views on these inputs may differ from other dealers’ views, and WFS’s estimated value of the securities may be higher, and perhaps materially higher, than the estimated value of the securities that would be determined by other dealers in the market. WFS’s models and its inputs and related assumptions may prove to be wrong and therefore not an accurate reflection of the value of the securities.

The Estimated Value Of The Securities Is Not An Indication Of The Price, If Any, At Which WFS Or Any Other Person May Be Willing To Buy The Securities From You In The Secondary Market.

The price, if any, at which WFS or any of its affiliates may purchase the securities in the secondary market will be based on WFS’s proprietary pricing models and will fluctuate over the term of the securities as a result of changes in the market and other factors described in the next risk factor. Any such secondary market price for the securities will also be reduced by a bid-offer spread, which may vary depending on the aggregate face amount of the securities to be purchased in the secondary market transaction, and the expected cost of unwinding any related hedging transactions. Unless the factors described in the next risk factor change significantly in your favor, any such secondary market price for the securities is likely to be less than the original offering price.

If WFS or any of its affiliates makes a secondary market in the securities at any time up to the issue date or during the 3-month period following the issue date, the secondary market price offered by WFS or any of its affiliates will be increased by an amount reflecting a portion of the costs associated with selling, structuring, hedging and issuing the securities that are included in the original offering price. Because this portion of the costs is not fully deducted upon issuance, any secondary market price offered by WFS or any of its affiliates during this period will be higher than it would be if it were based solely on WFS’s proprietary pricing models less the bid-offer spread and hedging unwind costs described above. The amount of this increase in the secondary market price will decline steadily to zero over this

3-month period. If you hold the securities through an account at WFS or any of its affiliates, we expect that this increase will also be reflected in the value indicated for the securities on your brokerage account statement. If you hold your securities through an account at a broker-dealer other than WFS or any of its affiliates, the value of the securities on your brokerage account statement may be different than if you held your securities at WFS or any of its affiliates, as discussed above under “Investment Description—Valuation of the securities after issuance.”

The Value Of The Securities Prior To Stated Maturity Will Be Affected By Numerous Factors, Some Of Which Are Related In Complex Ways.

The value of the securities prior to stated maturity will be affected by the then-current price of each Underlying Stock, interest rates at that time and a number of other factors, some of which are interrelated in complex ways. The effect of any one factor may be offset or magnified by the effect of another factor. The following factors, which we refer to as the “derivative component factors,” are expected to affect the value of the securities. When we refer to the “value” of your security, we mean the value you could receive for your security if you are able to sell it in the open market before the stated maturity date.

Performance of the Underlying Stocks. The value of the securities prior to maturity will depend substantially on the then-current price of each Underlying Stock. The price at which you may be able to sell the securities before stated maturity may be at a discount, which could be substantial, from their original offering price, if the price of the lowest performing Underlying Stock at such time is less than, equal to or not sufficiently above its starting price or its threshold price.

Interest Rates. The value of the securities may be affected by changes in the interest rates in the U.S. markets.

Volatility Of The Underlying Stocks. Volatility is the term used to describe the size and frequency of market fluctuations. The value of the securities may be affected if the volatility of the Underlying Stocks changes.

PRS-13

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Performing of the Common Stock of General Mills, Inc. and the Common Stock of Conagra Brands, Inc. due November 19, 2021

Correlation Between The Underlying Stocks. Correlation refers to the extent to which the prices of the Underlying Stocks tend to fluctuate at the same time, in the same direction and in similar magnitudes. The correlation between the Underlying Stocks may be positive, zero or negative. The value of the securities is likely to decrease if the correlation between the Underlying Stocks decreases.

Time Remaining To Maturity. The value of the securities at any given time prior to maturity will likely be different from that which would be expected based on the then-current prices of the Underlying Stocks. This difference will most likely reflect a discount due to expectations and uncertainty concerning the prices of the Underlying Stocks during the period of time still remaining to the stated maturity date.

Dividend Yields On The Underlying Stocks. The value of the securities may be affected by the dividend yields on the Underlying Stocks.

In addition to the derivative component factors, the value of the securities will be affected by actual or anticipated changes in our creditworthiness, as reflected in our secondary market rates. The value of the securities will also be limited by the automatic call feature because if the securities are automatically called, you will not receive the contingent coupon payments that would have accrued, if any, had the securities been called on a later calculation day or held until the stated maturity date. You should understand that the impact of one of the factors specified above, such as a change in interest rates, may offset some or all of any change in the value of the securities attributable to another factor, such as a change in the price of either or both of the Underlying Stocks. Because numerous factors are expected to affect the value of the securities, changes in the price of the Underlying Stocks may not result in a comparable change in the value of the securities.

The Securities Will Not Be Listed On Any Securities Exchange And We Do Not Expect A Trading Market For The Securities To Develop.

The securities will not be listed or displayed on any securities exchange or any automated quotation system. Although the agent and/or its affiliates may purchase the securities from holders, they are not obligated to do so and are not required to make a market for the securities. There can be no assurance that a secondary market will develop. Because we do not expect that any market makers will participate in a secondary market for the securities, the price at which you may be able to sell your securities is likely to depend on the price, if any, at which the agent is willing to buy your securities.

If a secondary market does exist, it may be limited. Accordingly, there may be a limited number of buyers if you decide to sell your securities prior to stated maturity. This may affect the price you receive upon such sale. Consequently, you should be willing to hold the securities to stated maturity.

Historical Prices Of The Underlying Stocks Should Not Be Taken As An Indication Of The Future Performance Of The Underlying Stocks During The Term Of The Securities.

It is impossible to predict whether the market prices of the Underlying Stocks will rise or fall. The Underlying Stocks have performed differently in the past and are expected to perform differently in the future. The market prices of the Underlying Stocks will be influenced by complex and interrelated political, economic, financial and other factors that can affect the Underlying Stock Issuers. Accordingly, any historical performances of the Underlying Stocks does not provide an indication of the future performances of the Underlying Stocks.

You Will Not Have Any Shareholder Rights.

Investing in the securities is not equivalent to investing in any of the Underlying Stocks. As an investor in the securities, you will not have voting rights or rights to receive dividends or other distributions or any other rights with

respect to any of the Underlying Stocks.

The Securities May Become Linked To The Common Stock Of Companies Other Than The Original Underlying Stock Issuers.

Following certain corporate events relating to an Underlying Stock, such as a stock-for-stock merger where the applicable Underlying Stock Issuer is not the surviving entity, the shares of a successor corporation to such Underlying Stock Issuer will be substituted for such Underlying Stock for all purposes of the securities. Following certain other corporate events relating to an Underlying Stock in which holders of such Underlying Stock would receive all of their consideration in cash and the surviving entity has no marketable securities outstanding or there is no surviving entity (including, but not limited to, a leveraged buyout or other going private transaction involving such Underlying Stock Issuer, or a liquidation of such Underlying Stock Issuer), the common stock of another company in the same industry group as such Underlying Stock Issuer will be substituted for such Underlying Stock for all purposes of the securities. In the event of such a corporate event, the equity-linked nature of the securities would be significantly altered. We describe the specific corporate events that can lead to these adjustments and the procedures for selecting those other reference stocks in the section entitled “Additional Terms of the Securities—Adjustment Events.” The occurrence of such corporate events and the consequent adjustments may materially and adversely affect the market price of the securities.

We Cannot Control Actions By The Underlying Stock Issuers.

Actions by an Underlying Stock Issuer may have an adverse effect on the price of such Underlying Stock, the stock closing price of such Underlying Stock on any calculation day, the ending price of such Underlying Stock and the value of the securities. We are not affiliated

PRS-14

Market Linked Securities—Auto-Callable with Contingent Coupon and Contingent Downside

Principal at Risk Securities Linked to the Lowest Perf
