FREEPORT-McMoRan COPPER & GOLD INC. NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Unaudited)

1. GENERAL INFORMATION

The accompanying unaudited consolidated financial statements have been prepared in accordance with the instructions to Form 10-Q and do not include all information and disclosures required by generally accepted accounting principles (GAAP) in the United States (U.S.). Therefore, this information should be read in conjunction with Freeport-McMoRan Copper & Gold Inc.'s (FCX) consolidated financial statements and notes contained in its annual report on Form 10-K for the year ended December 31, 2011 (2011 Annual Report). The information furnished herein reflects all adjustments that are, in the opinion of management, necessary for a fair statement of the results for the interim periods reported. All such adjustments are, in the opinion of management, of a normal recurring nature. Operating results for the three-month and nine-month periods ended September 30, 2012, are not necessarily indicative of the results that may be expected for the year ending December 31, 2012.

2. EARNINGS PER SHARE

FCX's basic net income per share of common stock was calculated by dividing net income attributable to FCX common stockholders by the weighted-average shares of common stock outstanding during the period. Following is a reconciliation of net income and weighted-average shares of common stock outstanding for purposes of calculating diluted net income per share (in millions, except per share amounts):

| | Three Months Ended September 30, | | | Nine Months Ended September 30, | | | |
|---|----------------------------------|---------|---|------------------------------------|---|---------|---|
| | 2012 | 2011 | | 2012 | | 2011 | |
| Net income | \$1,140 | \$1,294 | | \$3,035 | | \$4,881 | |
| Net income attributable to noncontrolling interests | (316) | (241 |) | (737 |) | (961 |) |
| Net income attributable to FCX common stockholders | \$824 | \$1,053 | | \$2,298 | | \$3,920 | |
| Weighted-average shares of common stock outstanding Add shares issuable upon exercise or vesting of: | 949 | 948 | | 949 | | 947 | |
| Dilutive stock options | 3 | 6 | a | 3 | a | 7 | а |
| Restricted stock units | 1 | 1 | | 1 | | 1 | |
| Weighted-average shares of common stock outstanding for purposes of calculating diluted net income per share | 953 | 955 | | 953 | | 955 | |
| Diluted net income per share attributable to FCX common stockholders | \$0.86 | \$1.10 | | \$2.41 | | \$4.10 | |

Excluded shares of common stock associated with outstanding stock options with exercise prices less than the average market price of FCX's common stock that were anti-dilutive based on the treasury stock method of

a. approximately three million for the third-quarter 2011, one million for the nine months ended September 30, 2012, and two million for the nine months ended September 30, 2011.

Outstanding stock options with exercise prices greater than the average market price of FCX's common stock during the period are excluded from the computation of diluted net income per share of common stock. Excluded amounts were approximately 24 million stock options with a weighted-average exercise price of \$42.52 per option for third-quarter 2012 and approximately 19 million stock options with a weighted-average exercise price of \$43.80 per option for the nine months ended September 30, 2012. Approximately 5 million stock options with a weighted-average exercise price of \$55.57 per option were excluded for third-quarter 2011, and approximately 3 million stock options with a weighted-average exercise price of \$55.74 per option were excluded for the nine months ended September 30, 2011.

3. INVENTORIES, INCLUDING LONG-TERM MILL AND LEACH STOCKPILES The components of inventories follow (in millions):

| | September 30, 2012 | December 31, 2011 |
|---|--------------------|-------------------|
| Mining operations: ^a | | |
| Raw materials | \$2 | \$1 |
| Finished goods ^b | 820 | 769 |
| Atlantic Copper, S.L.U. (Atlantic Copper): | | |
| Raw materials (concentrates) | 339 | 260 |
| Work-in-process | 191 | 187 |
| Finished goods | 22 | 9 |
| Total product inventories | 1,374 | 1,226 |
| Total materials and supplies, net ^c | 1,465 | 1,354 |
| Total inventories, excluding mill and leach stockpiles | \$2,839 | \$2,580 |
| Total product inventories Total materials and supplies, net ^c | 1,374 1,465 | 1,226 1,354 |

FCX's mining operations also have work-in-process inventories (i.e., mill and leach stockpiles), which are a. summarized below.

b. Primarily included molybdenum concentrates and copper concentrates, anodes, cathodes and rod.

c. Materials and supplies inventory was net of obsolescence reserves totaling \$26 million at September 30, 2012, and December 31, 2011.

A summary of mill and leach stockpiles follows (in millions):

| | September 30, | December 31, |
|---|---------------|--------------|
| | 2012 | 2011 |
| Current: | | |
| Mill stockpiles | \$97 | \$69 |
| Leach stockpiles | 1,498 | 1,220 |
| Total current mill and leach stockpiles | \$1,595 | \$1,289 |
| Long-term: ^a | | |
| Mill stockpiles | \$595 | \$535 |
| Leach stockpiles | 1,276 | 1,151 |
| Total long-term mill and leach stockpiles | \$1,871 | \$1,686 |

a. Metals in stockpiles not expected to be recovered within the next 12 months.

4. INCOME TAXES

Geographic sources of FCX's provision for income taxes follow (in millions):

| | Three Mo | Nine Months Ended | | |
|--------------------------|-----------|-------------------|---------|--------------------|
| | September | September 30, | | r 30, |
| | 2012 | 2011 | 2012 | 2011 |
| United States operations | \$98 | \$163 | \$291 | \$421 |
| International operations | 117 | ^a 645 | 837 | ^a 2,277 |
| Total | \$215 | \$808 | \$1,128 | \$2,698 |

Included a net tax benefit of \$234 million associated with an adjustment to Cerro Verde's deferred income tax a. liability.

FCX's consolidated effective income tax rate was 27 percent (33 percent excluding Cerro Verde's \$234 million net deferred tax liability adjustment) for the first nine months of 2012 and 36 percent for the first nine months of 2011.

Variations in the relative proportions of jurisdictional income can result in fluctuations to FCX's consolidated effective income tax rate.

Table of Contents

With the exception of Tenke Fungurume S.A.R.L. (TFM), FCX has not elected to permanently reinvest earnings from its foreign subsidiaries and has recorded deferred tax liabilities for foreign earnings that are available to be repatriated to the U.S. Cerro Verde previously recorded deferred Peruvian income tax liabilities for income taxes that would become payable if the reinvested profits used to fund the initial Cerro Verde sulfide expansion are distributed prior to the expiration of Cerro Verde's current stability agreement on December 31, 2013. Reinvested profits are not expected to be distributed prior to December 31, 2013. Accordingly, a net deferred income tax liability of \$234 million (\$123 million net of noncontrolling interests) was reversed and recognized as an income tax benefit in third-quarter 2012.

In July 2012, Sociedad Minera Cerro Verde S.A.A. (Cerro Verde) signed a new 15-year mining stability agreement with the Peruvian government, which is expected to become effective January 1, 2014, after the current mining stability agreement expires on December 31, 2013. In connection with the new mining stability agreement, Cerro Verde's income tax rate will increase from 30 percent to 32 percent. As a result of the change in the income tax rate, FCX recognized additional deferred tax expense of \$26 million (\$23 million net of noncontrolling interests) in third-quarter 2012, which relates primarily to the assets recorded in connection with the 2007 acquisition of Freeport-McMoRan Corporation (FMC).

In September 2011, Peru enacted a new mining tax and royalty regime and also created a special mining burden that companies with stability agreements could elect to pay. Cerro Verde elected to pay this special mining burden during the remaining term of its stability agreement. As a result, Cerro Verde recognized additional current and deferred tax expense of \$57 million (\$50 million net of noncontrolling interests) in third-quarter 2011. The deferred portion of this accrual related primarily to the assets recorded in connection with the 2007 acquisition of FMC.

5. DEBT AND EQUITY TRANSACTIONS

In February 2012, FCX sold \$500 million of 1.40% Senior Notes due 2015, \$500 million of 2.15% Senior Notes due 2017 and \$2.0 billion of 3.55% Senior Notes due 2022 for total net proceeds of \$2.97 billion. Interest on the 1.40% Senior Notes is payable semiannually on February 13 and August 13, which commenced on August 13, 2012. Interest on the 2.15% Senior Notes and the 3.55% Senior Notes is payable semiannually on March 1 and September 1, which commenced on September 1, 2012. These unsecured senior notes rank equally with FCX's other existing and future unsecured and unsubordinated indebtedness.

On March 14, 2012, FCX redeemed the remaining \$3.0 billion of its outstanding 8.375% Senior Notes due 2017, for which holders received 104.553 percent of the principal amount together with the accrued and unpaid interest. As a result of this redemption, FCX recorded a loss on early extinguishment of debt of \$168 million (\$149 million to net income attributable to FCX common stockholders or \$0.16 per diluted share) for the first nine months of 2012.

During the first quarter of 2011, FCX entered into a new senior unsecured revolving credit facility, which replaced the revolving credit facilities that were scheduled to mature on March 19, 2012. FCX recognized a loss on early extinguishment of debt totaling \$7 million (\$6 million to net income attributable to FCX common shareholders or \$0.01 per diluted share) for the first nine months of 2011 associated with this transaction.

On April 1, 2011, FCX redeemed its remaining \$1.1 billion of outstanding 8.25% Senior Notes due 2015, for which holders received 104.125 percent of the principal amount together with accrued and unpaid interest. As a result of this redemption, FCX recorded a loss on early extinguishment of debt totaling \$55 million (\$49 million to net income attributable to FCX common stockholders or \$0.05 per diluted share) for the first nine months of 2011.

During the second quarter of 2011, FCX purchased in the open market \$35 million of its 9.5% Senior Notes due 2031 for \$49 million, which resulted in losses on early extinguishment of debt totaling \$6 million (\$5 million to net income attributable to FCX common stockholders or \$0.01 per diluted share) for the first nine months of 2011.

Consolidated interest expense (excluding capitalized interest) totaled \$56 million in third-quarter 2012, \$105 million in third-quarter 2011, \$210 million for the first nine months of 2012 and \$325 million for the first nine months of 2011. Capitalized interest totaled \$14 million in third-quarter 2012, \$27 million in third-quarter 2011, \$62 million for the first nine months of 2011.

Table of Contents

On February 7, 2012, the Board of Directors authorized an increase in the cash dividend on FCX's common stock from an annual rate of \$1.00 per share to \$1.25 per share. On September 26, 2012, FCX's Board of Directors declared a quarterly dividend of \$0.3125 per share, which was paid on November 1, 2012, to common shareholders of record at the close of business on October 15, 2012.

6. FINANCIAL INSTRUMENTS

FCX does not purchase, hold or sell derivative financial instruments unless there is an existing asset or obligation, or it anticipates a future activity that is likely to occur and will result in exposure to market risks, which FCX intends to offset or mitigate. FCX does not enter into any derivative financial instruments for speculative purposes, but has entered into derivative financial instruments in limited instances to achieve specific objectives. These objectives principally relate to managing risks associated with commodity price changes, foreign currency exchange rates and interest rates.

Commodity Contracts. From time to time, FCX has entered into forward, futures and swap contracts to hedge the market risk associated with fluctuations in the prices of commodities it purchases and sells. Derivative financial instruments used by FCX to manage its risks do not contain credit risk-related contingent provisions. As of September 30, 2012, FCX had no price protection contracts relating to its mine production. A discussion of FCX's derivative commodity contracts and programs follows.

Derivatives Designated as Hedging Instruments - Fair Value Hedges

Copper Futures and Swap Contracts. Some of FCX's U.S. copper rod customers request a fixed market price instead of the New York Mercantile Exchange (COMEX) average copper price in the month of shipment. FCX hedges this price exposure in a manner that allows it to receive the COMEX average price in the month of shipment while the customers pay the fixed price they requested. FCX accomplishes this by entering into copper futures and swap contracts and then liquidating the copper futures contracts and settling the copper swap contracts during the month of shipment. Hedging gains or losses from these copper futures and swap contracts are recorded in revenues. FCX did not have any significant gains or losses during the three-month and nine-month periods ended September 30, 2012 and 2011, resulting from hedge ineffectiveness. At September 30, 2012, FCX held copper futures and swap contracts that qualified for hedge accounting for 53 million pounds at an average contract price of \$3.59 per pound, with maturities through December 2013.

A summary of gains (losses) recognized in revenues for derivative financial instruments related to commodity contracts that are designated and qualify as fair value hedge transactions, along with the unrealized gains (losses) on the related hedged item (firm sales commitments) follows (in millions):

| | Three Mo Septembe | | | | Nine Months Ended September 30, | | | |
|---|----------------------|---|-------------|---|------------------------------------|------|-------------|---|
| | 2012 | | 2011 | | 2012 | 2011 | | |
| Copper futures and swap contracts: Unrealized gains (losses): Derivative financial instruments Hedged item | \$13 (13 |) | \$(62 62 |) | \$20 (20 |) | \$(72 72 |) |
| Realized gains (losses): Matured derivative financial instruments | 1 |) | (10 |) | (3 |) | (4 |) |

Derivatives Not Designated as Hedging Instruments

Embedded Derivatives. As described in Note 1 to FCX's 2011 Annual Report under "Revenue Recognition," certain FCX copper concentrate, copper cathode and gold sales contracts provide for provisional pricing primarily based on

the London Metal Exchange (LME) price (copper) or the COMEX price (copper) and the London Bullion Market Association (London PM) price (gold) at the time of shipment as specified in the contract. Similarly, FCX purchases copper and molybdenum under contracts that provide for provisional pricing (molybdenum purchases are generally based on an average Metals Week Molybdenum Dealer Oxide price). FCX applies the normal purchases and normal sales scope exception in accordance with derivatives and hedge accounting guidance to the host sales agreements since the contracts do not allow for net settlement and always result in physical delivery. Sales and purchases with a provisional sales price contain an embedded derivative (i.e., the price settlement mechanism that is settled after the time of delivery) that is required to be bifurcated from the host contract. The host contract is the sale or purchase of the metals contained in the concentrates or cathodes at the then-current LME or COMEX price

Table of Contents

(copper), London PM price (gold) or the average Metals Week Molybdenum Dealer Oxide price (molybdenum) as defined in the contract. Mark-to-market price fluctuations recorded through the settlement date are reflected in revenues for sales contracts and in cost of sales as production and delivery costs for purchase contracts. A summary of FCX's embedded derivatives at September 30, 2012, follows:

| | Open | Average Pr Per Unit | rice | Maturities |
|---|-----------|------------------------|--------|---------------|
| | Positions | Contract | Market | Through |
| Embedded derivatives in provisional sales contracts: | | | | |
| Copper (millions of pounds) | 557 | \$3.49 | \$3.72 | March 2013 |
| Gold (thousands of ounces) | 67 | 1,698 | 1,781 | December 2012 |
| Embedded derivatives in provisional purchase contracts: | | | | |
| Copper (millions of pounds) | 326 | 3.50 | 3.72 | January 2013 |

Copper Forward Contracts. Atlantic Copper, FCX's wholly owned smelting and refining unit in Spain, enters into forward copper contracts designed to hedge its copper price risk whenever its physical purchases and sales pricing periods do not match. These economic hedge transactions are intended to hedge against changes in copper prices, with the mark-to-market hedging gains or losses recorded in cost of sales. At September 30, 2012, Atlantic Copper held net forward copper purchase contracts for 31 million pounds at an average contract price of \$3.71 per pound, with maturities through December 2012.

A summary of the realized and unrealized gains (losses) recognized in income before income taxes and equity in affiliated companies' net earnings for commodity contracts that do not qualify as hedge transactions, including embedded derivatives, follows (in millions):

| | Three Mor | nths Ended | Nine Mon | | | |
|--|-----------|------------|-----------|-------|--------|---|
| | September | : 30, | September | | | |
| | 2012 | 2011 | | 2012 | 2011 | |
| Embedded derivatives in provisional sales contracts ^a | \$164 | \$(657 |) | \$188 | \$(682 |) |
| Copper forward contracts ^b | 5 | 4 | | 17 | (2 |) |

a. Amounts recorded in revenues.

b. Amounts recorded in cost of sales as production and delivery costs.

Unsettled Derivative Financial Instruments

- b. Amounts recorded in other current assets.
- c. Amounts recorded in accounts payable and accrued liabilities.
- d. Amounts recorded either as a net accounts receivable or a net accounts payable.

Table of Contents

Foreign Currency Exchange Contracts. As a global company, FCX transacts business in many countries and in many currencies. Foreign currency transactions of FCX's international subsidiaries increase its risks because exchange rates can change between the time agreements are made and the time foreign currency transactions are settled. FCX may hedge or protect its international subsidiaries' foreign currency transactions from time to time by entering into forward exchange contracts to lock in or minimize the effects of fluctuations in exchange rates. FCX had no outstanding foreign currency exchange contracts at September 30, 2012.

Interest Rate Swap Contracts. From time to time, FCX or its subsidiaries may enter into interest rate swaps to manage its exposure to interest rate changes and to achieve a desired proportion of fixed-rate versus floating-rate debt based on current and projected market conditions. FCX may enter into fixed-to-floating interest rate swap contracts to protect against changes in the fair value of the underlying fixed-rate debt that result from market interest rate changes and to take advantage of lower interest rates. FCX had no outstanding interest rate swap contracts at September 30, 2012.

Credit Risk. FCX is exposed to credit loss when financial institutions with which FCX has entered into derivative transactions (commodity, foreign exchange and interest rate swaps) are unable to pay. To minimize the risk of such losses, FCX uses counterparties that meet certain credit requirements and periodically reviews the creditworthiness of these counterparties. FCX does not anticipate that any of the counterparties it deals with will default on their obligations. As of September 30, 2012, FCX did not have any significant credit exposure associated with derivative transactions.

Other Financial Instruments. Other financial instruments include cash and cash equivalents, accounts receivable, trust assets, investment securities, accounts payable and accrued liabilities, dividends payable and long-term debt. Refer to Note 7 for the fair values of these financial instruments.

Cash and Cash Equivalents, Accounts Receivable, Accounts Payable and Accrued Liabilities, and Dividends Payable. The financial statement amount is a reasonable estimate of the fair value because of the short maturity of these instruments and generally negligible credit losses.

Trust Assets and Investment Securities. The financial statement amount represents the fair value of trust assets and investment securities except for the investment in McMoRan Exploration Co.'s (MMR) 5³/₄% Convertible Perpetual Preferred Stock, which is recorded at cost.

Long-Term Debt. The financial statement amount represents cost except for long-term debt acquired in the FMC acquisition, which was recorded at fair value at the acquisition date.

7. FAIR VALUE MEASUREMENT

Fair value accounting guidance includes a hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 inputs) and the lowest priority to unobservable inputs (Level 3 inputs). FCX did not have any significant transfers in or out of Levels 1, 2 or 3 for the third quarter of 2012.

The carrying value for certain FCX financial instruments (i.e., cash, accounts receivable, accounts payable and accrued liabilities, and dividends payable) approximate fair value because of their short-term nature and generally negligible credit losses. A summary of the carrying amount and fair value of FCX's other financial instruments follows (in millions):

| Assets | At September 3 Carrying Amount | 80, 2012 Fair Value Total | Level 1 | Level 2 | Level 3 |

e. Included in other current assets.

f. Included in accounts payable and accrued liabilities.

Recorded at cost except for long-term debt acquired in the FMC acquisition, which was recorded at fair value at the ^g. acquisition date.

Valuation Techniques

Money market funds are classified within Level 1 of the fair value hierarchy because they are valued using quoted market prices in active markets.

MMR's 5¾% Convertible Perpetual Preferred Stock is not actively traded; therefore, FCX's investment in the MMR 5¾% Convertible Perpetual Preferred Stock is valued based on a pricing simulation model that uses the quoted market prices of MMR's publicly traded common stock as the most significant observable input and other inputs, such as expected volatility, expected settlement date, and risk-free interest rate. Therefore, this investment is classified within Level 2 of the fair value hierarchy.

Fixed income securities (government and agency securities, U.S. core fixed income funds, corporate bonds and asset-backed securities) are valued using a bid evaluation or a mid evaluation. A bid evaluation is an estimated price at which a dealer would pay for a security. A mid evaluation is the average of the estimated price at which a dealer would sell a security and the estimated price at which a dealer would pay for a security. These evaluations are based on quoted prices, if available, or models that use observable inputs and, as such, are classified within Level 2 of the fair value hierarchy.

Equity securities are valued at the closing price reported on the active market on which the individual securities are traded and, as such, are classified within Level 1 of the fair value hierarchy.

FCX's embedded derivatives on provisional copper concentrate, copper cathode and gold purchases and sales have critical inputs of quoted monthly LME or COMEX copper forward prices and the London PM gold forward price at each reporting date based on the month of maturity; however, FCX's contracts themselves are not traded on an exchange. Likewise, FCX's embedded derivatives on provisional molybdenum purchases have critical inputs based on the latest average weekly Metals Week Molybdenum Dealer Oxide prices; however, FCX's contracts themselves are not traded on an exchange. As a result, these derivatives are classified within Level 2 of the fair value hierarchy.

FCX's derivative financial instruments for copper futures and swap contracts and copper forward contracts that are traded on the respective exchanges are classified within Level 1 of the fair value hierarchy because they are valued using quoted monthly COMEX or LME forward prices at each reporting date based on the month of maturity (refer to Note 6 for further discussion). Certain of these contracts are traded on the over-the-counter market and are classified within Level 2 of the fair value hierarchy.

Long-term debt, including current portion, is not actively traded and is valued using prices obtained from a readily available pricing source and, as such, is classified within Level 2 of the fair value hierarchy.

The techniques described above may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. Furthermore, while FCX believes its valuation techniques are appropriate and consistent with other market participants, the use of different techniques or assumptions to determine fair value of certain financial instruments could result in a different fair value measurement at the reporting date. There have been no changes in the techniques used at September 30, 2012.

8. CONTINGENCIES AND COMMITMENTS

Environmental. FCX's mining, exploration, production and historical operating activities are subject to stringent laws and regulations governing the protection of the environment. FCX reviews changes in facts and circumstances associated with its environmental and reclamation obligations at least quarterly. There have been no material changes to FCX's environmental and reclamation obligations since year-end 2011. However, updated cost assumptions, including increases and decreases to cost estimates, changes in the anticipated scope and timing of remediation

activities and settlement of environmental matters may result in revisions to certain environmental obligations. As a result, FCX recorded adjustments to environmental obligations totaling net credits of \$82 million in third-quarter 2012 and \$36 million during the first nine months of 2012, and net charges of \$31 million in third-quarter 2011 and \$35 million during the first nine months of 2011.

Table of Contents

Gilt Edge Mine Site. On July 12, 2010, FCX was notified by the U.S. Department of Justice, acting at the request of the U.S. Environmental Protection Agency (EPA), that it was preparing to file suit in federal court against two of its wholly owned subsidiaries (Cyprus Mines Corporation and Cyprus Amax Minerals Company) and several other parties to recover costs incurred or to be incurred by the U.S. in remediating hazardous substances at the Gilt Edge mine site in Lawrence County, South Dakota. In September 2011, FCX reached an agreement in principle to settle this matter for an amount that is not material to FCX and less than the amount included for this matter in FCX's aggregate environmental obligations. The consent decree was finalized and approved by the court on October 10, 2012.

Asset Retirement Obligations (AROs). During third-quarter 2012, Cerro Verde updated its closure plan and increased its ARO by \$77 million to reflect revised cost estimates and accelerated timing of certain closure activities.

Litigation. There have been no material updates to previously reported legal proceedings included in Note 13 of FCX's 2011 Annual Report and in Note 8 of FCX's quarterly reports on Form 10-Q for the periods ended March 31, 2012, and June 30, 2012.

Other Contingencies. The Indonesian tax authorities issued assessments for various audit exceptions on PT Freeport Indonesia's income tax returns as follows (in millions):

| Date of assessment | Tax return year | Tax | Interest | Total | |
|--------------------|-----------------|------------|------------|-------|--|
| | Tux Toturn your | assessment | assessment | 1000 | |
| October 2010 | 2005 | \$106 | \$52 | \$158 | |
| November 2011 | 2006 | 22 | 10 | 32 | |
| March 2012 | 2007 | 91 | 44 | 135 | |
| Total | | \$219 | \$106 | \$325 | |

PT Freeport Indonesia has filed objections to the assessments. During first-quarter 2012, PT Freeport Indonesia's objections to the assessments related to 2005 were substantially all rejected by the Indonesian tax authorities and, in May 2012, appeals were filed with the Indonesian Tax Court. As of September 30, 2012, PT Freeport Indonesia has paid \$158 million (of which \$124 million is included in long-term receivables) for the disputed tax assessments related to 2005, 2006 and 2007.

Mining Contracts. Effective March 26, 2012, the Democratic Republic of Congo (DRC) government issued a Presidential Decree approving the modifications to TFM's bylaws. As a result, FCX's effective ownership interest in TFM was reduced from 57.75 percent to 56.0 percent and \$50 million of TFM's intercompany loans payable to FMC were converted to equity.

9. NEW ACCOUNTING STANDARDS

In May 2011, the Financial Accounting Standards Board (FASB) issued an Accounting Standards Update (ASU) in connection with guidance for fair value measurements and disclosures. This ASU clarifies the FASB's intent on current guidance, modifies and changes certain guidance and principles, and expands disclosures concerning Level 3 fair value measurements in the fair value hierarchy (including quantitative information about significant unobservable inputs within Level 3 of the fair value hierarchy). In addition, this ASU requires disclosure of the fair value hierarchy for assets and liabilities not measured at fair value in the statement of financial position, but whose fair value is required to be disclosed. This ASU became effective for interim and annual reporting periods beginning after December 15, 2011. FCX adopted this guidance effective January 1, 2012.

In June 2011, FASB issued an ASU in connection with guidance on the presentation of comprehensive income. The objective of this ASU is to improve the comparability, consistency and transparency of financial reporting and to increase the prominence of items reported in other comprehensive income. This ASU requires an entity to present the components of net income and other comprehensive income and total comprehensive income (includes net income) either in a single continuous statement of comprehensive income or in two separate but consecutive statements. This ASU eliminates the option to present the components of other comprehensive income as part of the statement of equity, but does not change the items that must be reported in other comprehensive income. This ASU became effective for interim and annual reporting periods beginning after December 15, 2011. Effective January 1, 2012, FCX adopted this ASU and presented total comprehensive income in a separate statement. Additionally, in December 2011, FASB deferred the effective date in this ASU for presenting reclassification adjustments for each component of accumulated other comprehensive income and other comprehensive income on the face of the financial statements.

10.SUBSEQUENT EVENTS

FCX evaluated events after September 30, 2012, and through the date the consolidated financial statements were issued, and determined any events or transactions occurring during this period that would require recognition or disclosure are appropriately addressed in these consolidated financial statements.

11.BUSINESS SEGMENTS

FCX has organized its operations into five primary divisions – North America copper mines, South America mining, Indonesia mining, Africa mining and Molybdenum operations. Notwithstanding this structure, FCX internally reports information on a mine-by-mine basis. Therefore, FCX concluded that its operating segments include individual mines or operations. Operating segments that meet certain thresholds are reportable segments.

Intersegment Sales. Intersegment sales between FCX's operations are based on similar arms-length transactions with third parties at the time of the sale. Intersegment sales may not be reflective of the actual prices ultimately realized because of a variety of factors, including additional processing, timing of sales to unaffiliated customers and transportation premiums.

Allocations. FCX allocates certain operating costs, expenses and capital expenditures to its operating divisions and individual segments. However, not all costs and expenses applicable to a mine or operation are allocated. U.S. federal and state income taxes are recorded and managed at the corporate level, whereas foreign income taxes are recorded and managed at the applicable country. In addition, most exploration and research activities are managed at the corporate level, and those costs along with some selling, general and administrative costs are not allocated to the operating divisions or segments. Accordingly, the following segment information reflects management determinations that may not be indicative of what the actual financial performance of each operating division or segment would be if it was an independent entity.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

TO THE BOARD OF DIRECTORS AND STOCKHOLDERS OF FREEPORT-McMoRan COPPER & GOLD INC.

We have reviewed the condensed consolidated balance sheet of Freeport-McMoRan Copper & Gold Inc. as of September 30, 2012, and the related consolidated statements of income and comprehensive income for the three- and nine-month periods ended September 30, 2012 and 2011, the consolidated statements of cash flows for the nine-month periods ended September 30, 2012 and 2011, and the consolidated statement of equity for the nine-month period ended September 30, 2012. These financial statements are the responsibility of the Company's management.

We conducted our review in accordance with the standards of the Public Company Accounting Oversight Board (United States). A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board, the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our review, we are not aware of any material modifications that should be made to the condensed consolidated financial statements referred to above for them to be in conformity with U.S. generally accepted accounting principles.

We have previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheet of Freeport-McMoRan Copper & Gold Inc. as of December 31, 2011, and the related consolidated statements of income, cash flows, and equity for the year then ended (not presented herein), and in our report dated February 27, 2012, we expressed an unqualified opinion on those consolidated balance sheet as of December 31, 2011, is fairly stated, in all material respects, in relation to the consolidated balance sheet from which it has been derived.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations.

OVERVIEW

In Management's Discussion and Analysis of Financial Condition and Results of Operations, "we," "us" and "our" refer to Freeport-McMoRan Copper & Gold Inc. (FCX) and its consolidated subsidiaries. You should read this discussion in conjunction with our financial statements, the related Management's Discussion and Analysis of Financial Condition and Results of Operations and the discussion of our Business and Properties in our annual report on Form 10-K for the year ended December 31, 2011, filed with the United States (U.S.) Securities and Exchange Commission (SEC). The results of operations reported and summarized below are not necessarily indicative of future operating results (refer to "Cautionary Statement" for further discussion). References to "Notes" are Notes included in our Notes to Consolidated Financial Statements. Throughout Management's Discussion and Analysis of Financial Condition and Results of Operations all references to earnings or losses per share are on a diluted basis, unless otherwise noted.

We are one of the world's largest copper, gold and molybdenum mining companies in terms of reserves and production. Our portfolio of assets includes the Grasberg minerals district in Indonesia, significant mining operations in North and South America, and the Tenke Fungurume (Tenke) minerals district in the Democratic Republic of Congo (DRC). The Grasberg minerals district contains the largest single recoverable copper reserve and the largest single gold reserve of any mine in the world based on the latest available reserve data provided by third-party industry consultants. We also operate Atlantic Copper, our wholly owned copper smelting and refining unit in Spain.

Our results for the third quarter and first nine months of 2012, compared with the 2011 periods, primarily reflected lower copper and gold sales volumes. Results for the first nine months of 2012 were also impacted by lower copper prices. Our net income attributable to common stockholders also includes net credits for adjustments to Cerro Verde's deferred income taxes and to our environmental and related litigation reserves totaling \$168 million for third-quarter 2012 and \$116 million for the first nine months of 2011. Refer to "Consolidated Results" for further discussion of our consolidated financial results for the three- and nine-month periods ended September 30, 2012 and 2011.

In May 2012, our Climax molybdenum mine began commercial production. Depending on market conditions, production from the Climax mine may ramp up to a rate of 20 million pounds of molybdenum per year during 2013, with the potential to produce 30 million pounds of molybdenum per year.

At September 30, 2012, we had \$3.7 billion in consolidated cash and cash equivalents and \$3.5 billion in total debt. In February 2012, we sold \$3.0 billion of senior notes in three tranches with a weighted average interest rate of approximately three percent. We used the proceeds from this offering, plus cash on hand, to redeem the remaining \$3.0 billion of our 8.375% Senior Notes. Refer to Note 5 and "Capital Resources and Liquidity – Financing Activities" for further discussion.

In February 2012, our Board of Directors (the Board) authorized an increase in the cash dividend on our common stock to an annual rate of \$1.25 per share (\$0.3125 per share quarterly). Refer to Note 5 for further discussion.

At current copper prices, we expect to produce significant operating cash flows, and to use our cash to invest in our development projects, including the underground development projects at Grasberg and the expansion projects at Morenci, Cerro Verde and Tenke, as well as to return cash to shareholders through common stock dividends and/or share repurchases.

OUTLOOK

We view the long-term outlook for our business positively, supported by limitations on supplies of copper and by the requirements for copper in the world's economy. We will continue to adjust our operating strategy as market conditions change. Our financial results vary with fluctuations in market prices for copper, gold and molybdenum and other factors. World market prices for these commodities have fluctuated historically and are affected by numerous factors beyond our control. Because we cannot control the price of our products, the key measures that management focuses on in operating our business are sales volumes, unit net cash costs and operating cash flow. Discussion of the outlook for each of these measures follows.

Sales Volumes. Consolidated sales from mines for the year 2012 are expected to approximate 3.6 billion pounds of copper, 1.0 million ounces of gold and 82 million pounds of molybdenum, including 930 million pounds of copper, 255 thousand ounces of gold and 20 million pounds of molybdenum for fourth-quarter 2012. Expected gold sales for 2012 are approximately 50,000 ounces less than the estimates provided in our quarterly report on Form 10-Q for the period ended June 30, 2012, because of lower gold production at Grasberg. Consolidated sales from mines for the year 2013 are expected to total 4.3 billion pounds of copper, 1.4 million ounces of gold and 90 million pounds of molybdenum. Projected sales volumes are dependent on a number of factors, including achievement of targeted mining rates, the successful operation of production facilities, the impact of weather conditions and other factors.

Unit Net Cash Costs. Quarterly unit net cash costs will vary with fluctuations in sales volumes and average realized prices for gold and molybdenum. Assuming average prices of \$1,700 per ounce of gold and \$11 per pound of molybdenum for fourth-quarter 2012, and achievement of current 2012 sales volume and cost estimates, consolidated unit site production and delivery costs, before net noncash and other costs, for our copper mining operations are expected to average \$2.03 per pound of copper and unit net cash costs (net of by-product credits) are expected to average \$1.50 per pound of copper for the year 2012 (fourth-quarter 2012 consolidated site production and delivery costs are expected to average \$2.11 per pound of copper and unit net cash costs (net of by-product credits) are expected to average \$1.62 per pound of copper). The impact of price changes during fourth-quarter 2012 on consolidated unit net cash costs for the year 2012 would approximate \$0.004 per pound for each \$50 per ounce change in the average price of gold, and \$0.004 per pound for each \$2 per pound change in the average price of molybdenum. Assuming consistent commodity price assumptions, unit net cash costs for 2013 are expected to be lower than 2012 because of projected increased copper and gold volumes at Grasberg. Refer to "Consolidated Results – Production and Delivery Costs" for further discussion of consolidated production and delivery costs.

Operating Cash Flows. Our operating cash flows vary with prices realized from copper, gold and molybdenum sales, our sales volumes, production costs, income taxes and other working capital changes and other factors. Based on current 2012 sales volume and cost estimates, and assuming average prices of \$3.70 per pound of copper, \$1,700 per ounce of gold and \$11 per pound of molybdenum for fourth-quarter 2012, consolidated operating cash flows are estimated to approximate \$4.0 billion for the year 2012 (net of an estimated \$1.4 billion in working capital uses and other tax payments). Projected operating cash flows for the year 2012 also reflect estimated taxes of \$1.6 billion (refer to "Consolidated Results – Provision for Income Taxes" for further discussion of our projected consolidated effective annual tax rate for 2012). The impact of price changes for fourth-quarter 2012 on operating cash flows would approximate \$80 million for each \$0.10 per pound change in the average price of copper, \$20 million for each \$100 per ounce change in the average price of gold and \$10 million for each \$2 per pound change in the average price of molybdenum.

COPPER, GOLD AND MOLYBDENUM MARKETS

World prices for copper, gold and molybdenum can fluctuate significantly. During the period from January 2002 through October 2012, the London Metal Exchange (LME) spot copper price varied from a low of \$0.64 per pound in 2002 to a record high of \$4.60 per pound in February 2011, the London Bullion Market Association (London) gold price fluctuated from a low of \$278 per ounce in 2002 to a record high of \$1,895 per ounce in September 2011, and the Metals Week Molybdenum Dealer Oxide weekly average price ranged from a low of \$2.43 per pound in 2002 to a record high of \$39.25 per pound in 2005. Copper, gold and molybdenum prices are affected by numerous factors beyond our control as described further in our "Risk Factors" contained in Part I, Item 1A of our annual report on Form 10-K for the year ended December 31, 2011.

This graph presents LME spot copper prices and the combined reported stocks of copper at the LME, the New York Mercantile Exchange (COMEX) and the Shanghai Futures Exchange from January 2002 through October 2012. From 2006 through most of 2008, limited supplies, combined with growing demand from China and other emerging economies, resulted in high copper prices and low levels of inventories. In late 2008, slowing consumption, turmoil in the U.S. financial markets and concerns about the global economy led to a sharp decline in copper prices, which reached a low of \$1.26 per pound in December 2008. Higher copper prices since the 2008 low are attributable to a combination of demand from emerging markets and limitations on available supply. During third-quarter 2012, LME spot copper prices ranged from \$3.32 per pound to \$3.81 per pound, averaged \$3.50 per pound and closed at \$3.75 per pound on September 30, 2012. While global economic concerns continue to influence prices, global exchange inventories have declined, representing less than two weeks of global demand.

We believe the underlying long-term fundamentals of the copper business remain positive, supported by the significant role of copper in the global economy and limited supplies. Future copper prices are expected to be volatile and are likely to be influenced by demand from China and emerging markets, economic activity in the U.S. and other industrialized countries, the timing of the development of new supplies of copper and production levels of mines and copper smelters. The LME spot copper price closed at \$3.55 per pound on October 31, 2012.

24

Table of Contents

This graph presents London p.m. gold prices from January 2002 through October 2012. During third-quarter 2012, gold prices ranged from \$1,556 per ounce to \$1,785 per ounce, averaged \$1,652 per ounce and closed at \$1,776 per ounce on September 30, 2012. Gold prices closed at \$1,719 per ounce on October 31, 2012.

This graph presents the Metals Week Molybdenum Dealer Oxide weekly average prices from January 2002 through October 2012. In late 2008, molybdenum prices declined significantly as a result of the financial market turmoil and a decline in demand. During third-quarter 2012, the weekly average price of molybdenum ranged from \$10.90 per pound to \$12.95 per pound, averaged \$11.93 per pound and closed at \$11.65 on September 30, 2012. Average Metals Week Molybdenum Dealer Oxide prices were lower in third-quarter 2012, compared with second-quarter 2012, reflecting weaker demand and cautious buying activity in response to the global economic situation. The Metals Week Molybdenum Dealer Oxide weekly average price was \$11.05 per pound on October 31, 2012.

a. Refer to Note 11 for a summary of revenues and operating income by business segment.

b. (refer to "Revenues" below for further discussion).

 We defer recognizing profits on intercompany sales until final sales to third parties occur. Refer to "Operations Atlantic Copper Smelting & Refining" for a summary of net impacts from changes in these deferrals. Includes net (credits) charges for adjustments to environmental obligations and related litigation reserves totaling \$(85) million (\$(68) million to net income attributable to common stockholders or \$(0.07) per share) for

d. third-quarter 2012, \$29 million (\$23 million to net income attributable to common stockholders or \$0.02 per share) for third-quarter 2011, \$(19) million (\$(16) million to net income attributable to common stockholders or \$(0.02) per share) for the first nine months of 2012 and \$78 million (\$63 million to net income attributable to common stockholders or \$0.07 per share) for the first nine months of 2011.

The 2012 periods include a net tax credit of \$100 million, net of noncontrolling interests (\$0.11 per share), associated with adjustments to Cerro Verde's deferred income taxes. The 2011 periods include a tax charge of \$50

e.million, net of noncontrolling interests (\$0.05 per share) for additional taxes associated with Cerro Verde's election to pay a special mining burden during the remaining term of its stability agreement. Refer to Note 4 and "Provision for Income Taxes" below for further discussion of these amounts.

f. 2012 and \$60 million (\$0.06 per share) for the first nine months of 2011 (refer to Note 5 for further discussion).

g.

Reflects per pound weighted-average production and delivery costs and unit net cash costs (net of by-product credits) for all copper mines, before net noncash and other costs. For reconciliations of the per pound costs by operating division to production and delivery costs applicable to sales reported in our consolidated financial statements, refer to "Operations – Unit Net Cash Costs" and to "Product Revenues and Production Costs."

Revenues

Consolidated revenues totaled \$4.4 billion in third-quarter 2012 and \$13.5 billion for the first nine months of 2012, compared with \$5.2 billion in third-quarter 2011 and \$16.7 billion for the first nine months of 2011. Consolidated revenues include the sale of copper concentrates, copper cathodes, copper rod, gold, molybdenum and other metals by our North and South America copper mines, the sale of copper concentrates (which also contain significant quantities of gold and silver) by our Indonesia mining operations, the sale of copper cathodes and cobalt hydroxide by our Africa mining operations, the sale of molybdenum in various forms by our Molybdenum operations, and the sale of copper cathodes, copper.

Following is a summary of changes in our consolidated revenues between periods (in millions):

| | Three Months Ended September 30, | Nine Months Endec September 30, | 1 |
|--|-------------------------------------|------------------------------------|---|
| Consolidated revenues - 2011 periods | \$5,195 | \$16,718 | |
| Higher (lower) price realizations from mining operations: | | | |
| Copper | 37 | (830 |) |
| Gold | 7 | 76 | |
| Molybdenum | (57) | (174 |) |
| Silver | (16) | (40 |) |
| Cobalt | (14) | (44 |) |
| (Lower) higher sales volumes from mining operations: | | | |
| Copper | (89) | (783 |) |
| Gold | (351) | (765 |) |
| Molybdenum | 33 | 38 | |
| Silver | (27) | (60 |) |
| Cobalt | 23 | — | |
| Favorable impact of net adjustments to prior period provisionally priced sales | 216 | 132 | |
| Lower purchased copper | (51) | (437 |) |
| Lower Atlantic Copper revenues | (199) | (207 |) |
| Other, including intercompany eliminations | (290) | (127 |) |
| Consolidated revenues - 2012 periods | \$4,417 | \$13,497 | |

Price Realizations

Our consolidated revenues vary as a result of fluctuations in the market prices of copper, gold, molybdenum, silver and cobalt. Realized copper prices averaged \$3.64 per pound in third-quarter 2012 (compared with \$3.60 per pound in third-quarter 2011) and \$3.63 per pound for the first nine months of 2012 (compared with \$3.94 for the first nine months of 2011). Realized gold prices averaged \$1,728 per ounce in third-quarter 2012 (compared with \$1,693 per ounce in third-quarter 2011) and \$1,666 per ounce for the first nine months of 2012 (compared with \$1,565 per ounce for the first nine months of 2011). Realized molybdenum prices averaged \$13.62 per pound in third-quarter 2012 (compared with \$16.34 per pound in third-quarter 2011) and \$14.79 per pound for the first nine months of 2012 (compared with \$17.57 per pound for the first nine months of 2011).

Sales Volumes

Consolidated sales volumes totaled 922 million pounds of copper, 202 thousand ounces of gold and 21 million pounds of molybdenum in third-quarter 2012, compared with 947 million pounds of copper, 409 thousand ounces of gold and 19 million pounds of molybdenum in third-quarter 2011. For the first nine months of 2012, consolidated sales volumes totaled 2.7 billion pounds of copper, 756 thousand ounces of gold and 62 million pounds of molybdenum, compared with 2.9 billion pounds of copper, 1.2 million ounces of gold and 60 million pounds of molybdenum for the

first nine months of 2011. Lower consolidated copper and gold sales volumes in the 2012 periods primarily reflected lower ore grades in Indonesia, partly offset by increased production in North America and Africa. Lower copper and gold sales volumes for the first nine months of 2012 also reflected lower production rates in Indonesia resulting from the first-quarter 2012 work interruptions and related temporary suspension of operations, and lower copper volumes in South America. Refer to "Operations" for further discussion of sales volumes at our operating divisions.

Provisionally Priced Copper Sales

During the first nine months of 2012, 45 percent of our mined copper was sold in concentrate, 28 percent as cathode and 27 percent as rod from our North America operations. Substantially all of our copper concentrate and cathode sales contracts provide final copper pricing in a specified future month (generally one to four months from the shipment date) based primarily on quoted LME monthly average spot copper prices. We receive market prices based on prices in the specified future period, which results in price fluctuations recorded through revenues until the date of settlement. We record revenues and invoice customers at the time of shipment based on then-current LME prices, which results in an embedded derivative on our provisionally priced concentrate and cathode sales that is adjusted to fair value through earnings each period, using the period-end forward prices, until the date of final pricing. To the extent final prices are higher or lower than what was recorded on a provisional basis, an increase or decrease to revenues is recorded each reporting period until the date of final pricing. Accordingly, in times of rising copper prices, our revenues benefit from adjustments to the final pricing of provisionally priced sales pursuant to contracts entered into in prior periods; in times of falling copper prices, the opposite occurs.

At June 30, 2012, we had provisionally priced copper sales at our copper mining operations, primarily South America and Indonesia, totaling 329 million pounds of copper (net of intercompany sales and noncontrolling interests) recorded at an average of \$3.49 per pound. Higher prices during third-quarter 2012 resulted in adjustments to these provisionally priced copper sales that favorably impacted consolidated revenues by \$24 million (\$12 million to net income attributable to common stockholders or \$0.01 per share) in third-quarter 2012, compared with adjustments to the June 30, 2011, provisionally priced copper sales that unfavorably impacted third-quarter 2011 revenues by \$213 million (\$100 million to net income attributable to common stockholders or \$0.05 per share). Adjustments to the December 31, 2011, provisionally priced copper sales favorably impacted consolidated revenues by \$101 million (\$43 million to net income attributable to common stockholders or \$0.05 per share) for the first nine months of 2012, compared with adjustments to the December 31, 2010, provisionally priced copper sales that unfavorably priced copper sales that unfavorably impacted consolidated revenues by \$101 million (\$43 million to net income attributable to common stockholders or \$0.05 per share) for the first nine months of 2012, compared with adjustments to the December 31, 2010, provisionally priced copper sales that unfavorably impacted consolidated revenues by \$12 million (\$5 million to net income attributable to common stockholders or \$0.05 per share) for the first nine months of 2012, compared with adjustments to the December 31, 2010, provisionally priced copper sales that unfavorably impacted consolidated revenues by \$12 million (\$5 million to net income attributable to common stockholders or \$0.01 per share) for the first nine months of 2011.

At September 30, 2012, we had provisionally priced copper sales at our copper mining operations, primarily South America and Indonesia, totaling 325 million pounds of copper (net of intercompany sales and noncontrolling interests) recorded at an average of \$3.72 per pound, subject to final pricing over the next several months. We estimate that each \$0.05 change in the price realized from the September 30, 2012, provisional price recorded would have a net impact on our 2012 consolidated revenues of approximately \$23 million (\$11 million to net income attributable to common stockholders). The LME spot copper price closed at \$3.55 per pound on October 31, 2012.

Purchased Copper

From time to time, we purchase copper cathode to be processed by our Rod & Refining operations when production from our North America copper mines does not meet customer demand.

Atlantic Copper Revenues

The decrease in Atlantic Copper's revenues in the 2012 periods, compared with the 2011 periods, primarily reflected lower production in third-quarter 2012 and lower copper realizations for the first nine months of 2012. Refer to "Operations - Atlantic Copper Smelting & Refining" for further discussion.

Production and Delivery Costs

Consolidated production and delivery costs totaled \$2.6 billion in both the third quarters of 2012 and 2011, \$7.6 billion for the first nine months of 2012 and \$7.5 billion for the first nine months of 2011.

Consolidated unit site production and delivery costs, before net noncash and other costs, for our copper mining operations averaged \$2.03 per pound of copper in third-quarter 2012 and \$2.00 per pound of copper for the first nine

months of 2012, compared with \$1.71 per pound of copper in third-quarter 2011 and \$1.65 per pound of copper for the first nine months of 2011. Higher unit site production and delivery costs in the 2012 periods primarily reflected lower copper sales volumes in Indonesia and higher mining costs. Assuming average prices of \$1,700 per ounce of gold and \$11 per pound of molybdenum for fourth-quarter 2012, and achievement of current 2012 cost estimates, consolidated unit site production and delivery costs are expected to average \$2.03 per pound of copper for the year 2012 (\$2.11 for fourth-quarter 2012). Consolidated unit net cash costs for 2013 are expected to be lower than 2012 because of projected increased copper and gold volumes at Grasberg. Refer to "Operations – Unit Net Cash Costs" for further discussion of unit net cash costs associated with our operating divisions, and to "Product Revenues and Production Costs" for reconciliations of per pound costs by operating division to production and delivery costs applicable to sales reported in our consolidated financial statements.

Table of Contents

Our copper mining operations require significant energy, principally diesel, electricity, coal and natural gas. For the year 2012, energy costs are expected to approximate 21 percent of our consolidated copper production costs, which reflects projected purchases of approximately 255 million gallons of diesel fuel; 6,900 gigawatt hours of electricity at our North America, South America and Africa copper mining operations (we generate all of our power at our Indonesia mining operation); 700 thousand metric tons of coal for our coal power plant in Indonesia; and 1 million MMBTU (million british thermal units) of natural gas at certain of our North America mines. Energy costs for 2011 approximated 21 percent of our consolidated copper production costs.

Depreciation, Depletion and Amortization

Consolidated depreciation, depletion and amortization expense totaled \$298 million in third-quarter 2012, \$856 million for the first nine months of 2012, \$257 million in third-quarter 2011 and \$756 million for the first nine months of 2011. Depreciation will vary under the unit of production (UOP) method as a result of increases and decreases in sales volumes and the related UOP rates at our mining operations. Higher depreciation, depletion and amortization expense for the 2012 periods, compared with the 2011 periods, primarily reflected higher production and asset additions in North America, partly offset by lower production in Indonesia.

Selling, General and Administrative Expenses

Consolidated selling, general and administrative expenses totaled \$110 million in third-quarter 2012, \$102 million in third-quarter 2011, \$311 million for the first nine months of 2012 and \$323 million for the first nine months of 2011.

Exploration and Research Expenses

Consolidated exploration and research expenses totaled \$79 million in third-quarter 2012 and \$214 million for the first nine months of 2012, compared with \$78 million in third-quarter 2011 and \$194 million for the first nine months of 2011. We are actively conducting exploration activities near our existing mines with a focus on opportunities to expand reserves that will support additional future production capacity in the large mineral districts where we currently operate. Exploration results indicate opportunities for what we believe could be significant future potential reserve additions in North and South America and in the Tenke minerals district. The drilling data in North America continues to indicate the potential for expanded sulfide production.

For the year 2012, exploration and research expenditures are expected to total approximately \$290 million, including approximately \$255 million for exploration. Exploration activities will continue to focus primarily on the potential for future reserve additions in our existing mineral districts.

Environmental Obligations and Shutdown Costs

Environmental obligation costs (credits) reflect net revisions to our long-term environmental obligations, which will vary from period to period because of changes to environmental laws and regulations, the settlement of environmental matters and/or circumstances affecting our operations that could result in significant changes in our estimates. Shutdown costs include care and maintenance costs and any litigation, remediation or related expenditures associated with closed facilities or operations.

Environmental obligations and shutdown costs totaled a net credit of \$73 million in third-quarter 2012, and net charges of \$18 million for the first nine months of 2012, \$38 million in third-quarter 2011 and \$98 million for the first nine months of 2011. Refer to Note 8 and "Contingencies" for further discussion of environmental obligations and litigation matters associated with closed facilities or operations.

Interest Expense, Net

Consolidated interest expense (excluding capitalized interest) totaled \$56 million in third-quarter 2012 and \$210 million for the first nine months of 2012, compared with \$105 million in third-quarter 2011 and \$325 million for the first nine months of 2011. Lower interest expense for the 2012 periods primarily reflected the impact of the

first-quarter 2012 refinancing transaction.

Capitalized interest is primarily related to our development projects and totaled \$14 million in third-quarter 2012 and \$62 million for the first nine months of 2012, compared with \$27 million in third-quarter 2011 and \$75 million for the first nine months of 2011. Refer to "Operations" for further discussion of current development projects.

Losses on Early Extinguishment of Debt

We recorded losses on early extinguishment of debt totaling \$168 million for the first nine months of 2012 associated with the redemption of our remaining 8.375% Senior Notes.

We recorded losses on early extinguishment of debt totaling \$68 million for the first nine months of 2011 associated with the redemption of our 8.25% Senior Notes, the revolving credit facilities that were replaced in March 2011 by a new senior unsecured revolving credit facility and open-market purchases of our 9.5% Senior Notes.

Refer to Note 5 for further discussion of these transactions.

Provision for Income Taxes

Following is a summary of the approximate amounts in the calculation of our consolidated provision for income taxes for the 2012 and 2011 periods (in millions, except percentages):

| | Nine Month September 3 | | | | Nine Months September 3 | | | |
|--|---------------------------|-----------------------|-------------------------------------|----------------|----------------------------|-----------------------|------------------------------------|-----|
| | Income ^a | Effective Tax Rate | Income Ta (Provision) Benefit | | Income ^a | Effective Tax Rate | Income Ta (Provision Benefit | |
| U.S. | \$1,231 | 24% | \$(291 |) | \$1,772 | 24% | \$(421 |) |
| South America | 1,675 | 36% | (609 |) ^b | 2,326 | 36% | (829 |) c |
| Indonesia | 940 | 41% | (387 |) | 2,870 | 43% | (1,234 |) |
| Africa | 263 | 30% | (79 |) | 293 | 34% | (100 |) |
| Eliminations and other | 54 | N/A | 10 | | 304 | N/A | (127 |) |
| Annualized rate adjustment ^d | N/A | N/A | (6 |) | N/A | N/A | 13 | |
| | 4,163 | 33% ¹ | f (1,362 |) | 7,565 | 36% | (2,698 |) |
| Deferred tax liability adjustment ^e | | N/A | 234 | | | N/A | | |
| Consolidated FCX | \$4,163 | 27% | \$(1,128 |) | \$7,565 | 36% | \$(2,698 |) |

a. Represents income by geographic location before income taxes and equity in affiliated companies' net earnings. In July 2012, Sociedad Minera Cerro Verde S.A.A. (Cerro Verde) signed a new 15-year mining stability agreement with the Peruvian government, which is expected to become effective after the current mining stability agreement expires on December 31, 2013. In connection with the new mining stability agreement, Cerro Verde's income tax

b.rate will increase from 30 percent to 32 percent. As a result of the change in the income tax rate, we recognized additional deferred tax expense of \$26 million (\$23 million net of noncontrolling interest) in third-quarter 2012, which relates primarily to the assets recorded in connection with the 2007 acquisition of Freeport-McMoRan Corporation (FMC).

In September 2011, Peru enacted a new mining tax and royalty regime and also created a special mining burden that companies with stability agreements could elect to pay. Cerro Verde elected to pay this special mining burden

c. during the remaining term of its stability agreement. As a result, Cerro Verde recognized additional current and deferred tax expense of \$57 million (\$50 million net of noncontrolling interest) in third-quarter 2011. The deferred portion of this accrual relates primarily to the assets recorded in connection with the 2007 acquisition of FMC.

d. In accordance with applicable accounting rules, we adjust our interim provision for income taxes equal to our estimated annualized tax rate.

With the exception of Tenke Fungurume S.A.R.L. (TFM), we have not elected to permanently reinvest earnings from our foreign subsidiaries, and we have recorded deferred tax liabilities for foreign earnings that are available to be repatriated to the U.S. Cerro Verde previously recorded deferred Peruvian income tax liabilities for income taxes that would become payable if the reinvested profits used to fund the initial Cerro Verde sulfide expansion are

- e. distributed prior to the expiration of Cerro Verde's current stability agreement on December 31, 2013. Reinvested profits are not expected to be distributed prior to December 31, 2013. Accordingly, a net deferred tax liability totaling \$234 million (\$123 net of noncontrolling interest) was reversed and recognized as an income tax benefit in third-quarter 2012.
- f. Our consolidated effective income tax rate is a function of the combined effective tax rates for the jurisdictions in which we operate. Accordingly, variations in the relative proportions of jurisdictional income can result in fluctuations to our consolidated effective income tax rate. Assuming average prices of \$3.70 per pound for copper,

\$1,700 per ounce for gold and \$11 per pound for molybdenum for fourth-quarter 2012 and achievement of current sales volume and cost estimates, we estimate our consolidated effective tax rate, excluding the impact of the deferred tax liability adjustment in note e, will approximate 33 percent for the fourth quarter and the year 2012.

OPERATIONS

North America Copper Mines

We currently operate seven copper mines in North America – Morenci, Bagdad, Safford, Sierrita and Miami in Arizona, and Tyrone and Chino in New Mexico. All of these mining operations are wholly owned, except for Morenci, an unincorporated joint venture in which we own an 85 percent undivided interest.

The North America copper mines include open-pit mining, sulfide ore concentrating, leaching and solution extraction/electrowinning (SX/EW) operations. Molybdenum concentrate is also produced by certain of our North America copper mines (Sierrita, Bagdad, Morenci and Chino). A majority of the copper produced at our North America copper mines is cast into copper rod by our Rod & Refining operations. The remainder of our North America copper sales is in the form of copper cathode or copper concentrate.

Operating and Development Activities. We have completed projects to increase production at our North America copper mines, including restarting certain mining and milling operations and increasing mining rates at Morenci and Chino. Ramp up activities at Chino are continuing, with annual production of approximately 250 million pounds of copper targeted in 2014. We continue to evaluate a number of opportunities to invest in additional production capacity at several of our North America copper mines. Exploration results in recent years indicate the potential for significant additional sulfide development in North America.

Morenci Mill Expansion. We are engaged in a project to expand mining and milling capacity at Morenci to process additional sulfide ores identified through exploratory drilling. The approximate \$1.4 billion project is targeting incremental annual production of approximately 225 million pounds of copper in 2014 through an increase in milling rates from the current level of 50,000 metric tons of ore per day to approximately 115,000 metric tons of ore per day, and mining rates from the current level of 700,000 short tons per day to 900,000 short tons per day. We have received material permits and have commenced engineering and initial construction, and procurement activities are in progress. Project costs of \$211 million have been incurred as of September 30, 2012 (\$184 million during the first nine months of 2012). Considering the large size of this project, actual costs could differ materially from these estimates.

Other Matters. As described further in "Critical Accounting Estimates" contained in Part II, Items 7. and 7A of our annual report on Form 10-K for the year ended December 31, 2011, we record, as inventory, applicable costs for copper contained in mill and leach stockpiles that are expected to be processed in the future based on proven processing techniques. Processes and recovery rates are monitored regularly, and recovery rate estimates are adjusted periodically as additional information becomes available and as related technology changes. During third-quarter 2012, we completed an assessment of recovery rates at our Chino leaching operations resulting in a downward revision of those rates and a corresponding reduction of 594 million pounds of estimated recoverable copper in leach stockpiles at Chino.

Operating Data. Following is summary operating data for the North America copper mines for the third quarters and first nine months of 2012 and 2011:

| | Three Months Ended September 30, | | Nine Months Ended September 30, | |
|--|----------------------------------|---------|------------------------------------|---------|
| | 2012 | 2011 | 2012 | 2011 |
| Operating Data, Net of Joint Venture Interest | | | | |
| Copper (millions of recoverable pounds) | | | | |
| Production | 337 | 322 | 1,005 | 917 |
| Sales, excluding purchases | 331 | 307 | 1,030 | 914 |
| Average realized price per pound | \$3.58 | \$4.05 | \$3.66 | \$4.19 |
| Molybdenum (millions of recoverable pounds) | | | | |
| Production ^a | 8 | 10 | 27 | 27 |
| 100% Operating Data SX/EW operations | | | | |
| Leach ore placed in stockpiles (metric tons per day) | 922,100 | 872,200 | 967,700 | 841,700 |
| Average copper ore grade (percent) | 0.22 | 0.25 | 0.22 | 0.25 |
| Copper production (millions of recoverable pounds) | 211 | 199 | 639 | 582 |
| Mill operations | | | | |
| Ore milled (metric tons per day) | 242,700 | 225,800 | 235,700 | 220,100 |
| Average ore grade (percent): | | | | |

| Molybdenum | 0.03 | 0.03 | 0.03 | 0.03 |
| Copper recovery rate (percent) | 85.4 | 84.5 | 83.5 | 83.5 |
| Copper production (millions of recoverable pounds) | 150 | 146 | 436 | 404 |

a. Reflects molybdenum production from certain of the North America copper mines. Sales of molybdenum are a. reflected in the Molybdenum division.

Copper sales volumes from our North America copper mines increased to 331 million pounds in third-quarter 2012 and 1.0 billion pounds for the first nine months of 2012, compared with 307 million pounds in third-quarter 2011 and 914 million pounds for the first nine months of 2011, primarily reflecting increased production at the Chino mine. The first nine months of 2012 also reflect increases in production at the Safford and Miami mines and timing of shipments at Morenci.

For the year 2012, copper sales volumes from our North America copper mines are expected to approximate 1.3 billion pounds, compared with 1.2 billion pounds in 2011. Molybdenum production from our North America copper mines is expected to approximate 35 million pounds for the year 2012, compared with 35 million pounds in 2011.

Unit Net Cash Costs. Unit net cash costs per pound of copper is a measure intended to provide investors with information about the cash-generating capacity of our mining operations expressed on a basis relating to the primary metal product for our respective operations. We use this measure for the same purpose and for monitoring operating performance by our mining operations. This information differs from measures of performance determined in accordance with generally accepted accounting principles (GAAP) in the U.S. and should not be considered in isolation or as a substitute for measures of performance determined in accordance with U.S. GAAP. This measure is presented by other metals mining companies, although our measure may not be comparable to similarly titled measures reported by other companies.

Gross Profit per Pound of Copper and Molybdenum

The following tables summarize unit net cash costs and gross profit per pound at our North America copper mines for the third quarters and first nine months of 2012 and 2011. Refer to "Product Revenues and Production Costs" for an explanation of the "by-product" and "co-product" methods and a reconciliation of unit net cash costs per pound to production and delivery costs applicable to sales reported in our consolidated financial statements.

Molybdenum credits and revenues reflect volumes produced at market-based pricing and also include tolling revenues at Sierrita.

b. Reflects molybdenum produced by certain of our North America copper mines.

Our operating North America copper mines have varying cost structures because of differences in ore grades and characteristics, processing costs, by-products and other factors. Unit net cash costs (net of by-product credits) for our North America copper mines averaged \$1.77 per pound of copper in third-quarter 2012 and \$1.63 per pound of copper for the first nine months of 2012, compared with \$1.42 per pound of copper in the third quarter and \$1.38 in the first nine months of 2011. Higher average unit net cash costs in the 2012 periods primarily reflected lower molybdenum credits and increased mining rates, partly offset by higher copper sales volumes.

Because certain assets are depreciated on a straight-line basis, North America's unit depreciation rate varies with the level of copper production and sales.

Assuming achievement of current sales volume and cost estimates and an average price of \$11 per pound of molybdenum for fourth-quarter 2012, we estimate that average unit site production and delivery costs for our North America copper mines would approximate \$1.90 per pound of copper and average unit net cash costs (net of by-product credits) would approximate \$1.67 per pound of copper for the year 2012, compared with \$1.41 per pound of copper in 2011 (fourth-quarter 2012 site production and delivery costs are expected to average \$1.96 per pound of copper and unit net cash costs (net of by-product credits) are expected to average \$1.77 per pound of copper). North America's average unit net cash costs for 2012 would change by approximately \$0.01 per pound for each \$2 per pound change in the average price of molybdenum during fourth-quarter 2012.

South America Mining

We operate four copper mines in South America – Cerro Verde in Peru, and El Abra, Candelaria and Ojos del Salado in Chile. We own a 53.56 percent interest in Cerro Verde, a 51 percent interest in El Abra, and an 80 percent interest in both Candelaria and Ojos del Salado.

South America mining includes open-pit and underground mining, sulfide ore concentrating, leaching and SX/EW operations. Production from our South America mines is sold as copper concentrate or copper cathode under long-term contracts. Our South America mines ship a portion of their copper concentrate and cathode inventories to Atlantic Copper, an affiliated smelter. In addition to copper, the Cerro Verde mine produces molybdenum concentrates, and the Candelaria and Ojos del Salado mines produce gold and silver.

Operating and Development Activities. Considering the long-term nature and large size of our South America development projects, actual costs could differ materially from the below estimates.

Cerro Verde Expansion. At Cerro Verde, we are engaged in a large-scale concentrator expansion. The approximate \$4.4 billion project would expand the concentrator facilities from 120,000 metric tons of ore per day to 360,000 metric tons of ore per day and provide incremental annual production of approximately 600 million pounds of copper and 15 million pounds of molybdenum beginning in 2016. An environmental impact assessment was filed in fourth-quarter 2011. Permitting is in an advanced stage and engineering and procurement of long-lead items is in progress. We expect to commence construction in 2013.

An agreement has been reached with the Regional Government of Arequipa, the National Government, Servicio de Agua Potable y Alcantarillado de Arequipa S.A. (SEDAPAR) and other local institutions to allow Cerro Verde to finance the engineering and construction of a wastewater treatment plant for Arequipa, should Cerro Verde proceed with the expansion. Once Cerro Verde obtains a license for the treated water it would be used to supplement its existing water supplies to support the concentrator expansion.

El Abra Sulfide. During 2011, we commenced production from El Abra's sulfide ores. Production from the sulfide ore is expected to approximate 300 million pounds of copper per year, replacing the currently depleting oxide copper production. The aggregate capital investment for this project is expected to approximate \$800 million through 2015, which included approximately \$580 million for the initial phase of the project.

We are also engaged in pre-feasibility studies for a potential large-scale milling operation at El Abra to process additional sulfide material and to achieve higher recoveries. Exploration results at El Abra indicate the potential for a significant sulfide resource.

Candelaria Water. As part of our overall strategy to supply water to the Candelaria mine, we completed construction of a pipeline to bring water from a nearby water treatment facility. In addition, we are constructing a desalination plant and pipeline that will supply Candelaria's longer term water needs. The plant is expected to be completed in early 2013 at a cost of approximately \$310 million. Project costs of \$278 million have been incurred as of September 30, 2012 (\$152 million during the first nine months of 2012).

Other Matters. In July 2012, Cerro Verde signed a new 15-year mining stability agreement with the Peruvian government, which is expected to become effective after the current mining stability agreement expires on December 31, 2013. See Note 10 and "Consolidated Results - Provision for Income Taxes" for further discussion.

Operating Data. Following is summary operating data for our South America mining operations for the third quarters and first nine months of 2012 and 2011:

| | Three Months Ended September 30, | | Nine Months September 30 | | |
|--|----------------------------------|---------|-----------------------------|---------|--|
| | 2012 | 2011 | 2012 | 2011 | |
| Copper (millions of recoverable pounds) | | | | | |

| Sales | 21 | 23 | 56 | 72 | |
| Average realized price per ounce | \$1,736 | \$1,664 | \$1,678 | \$1,556 | |
| Molybdenum (millions of recoverable pounds) | | | | | |
| Production ^a | 2 | 2 | 6 | 8 | |
| SX/EW operations | | | | | |
| Leach ore placed in stockpiles (metric tons per day) | 248,100 | 244,100 | 229,100 | 249,500 | |
| Average copper ore grade (percent) | 0.55 | 0.54 | 0.55 | 0.48 | |
| Copper production (millions of recoverable pounds) | 115 | 111 | 346 | 314 | |
| Mill operations | | | | | |
| Ore milled (metric tons per day) | 191,400 | 185,700 | 190,000 | 192,300 | |
| Average ore grade: | | | | | |
| Copper (percent) | 0.59 | 0.66 | 0.58 | 0.66 | |
| Gold (grams per metric ton) | 0.09 | 0.12 | 0.09 | 0.12 | |
| Molybdenum (percent) | 0.02 | 0.02 | 0.02 | 0.02 | |
| Copper recovery rate (percent) | 90.7 | 89.1 | 89.5 | 90.0 | |
| Copper production (millions of recoverable pounds) | 196 | 214 | 562 | 655 | |

a. Reflects molybdenum production from Cerro Verde. Sales of molybdenum are reflected in the Molybdenum division.

Copper sales from our South America mining operations declined to 308 million pounds in third-quarter 2012, compared with 322 million pounds in third-quarter 2011, primarily reflecting lower ore grades at Candelaria and timing of shipments. Lower copper sales volumes of 895 million pounds for the first nine months of 2012, compared with 965 million pounds for the first nine months of 2011, primarily reflected lower ore grades at Candelaria and Cerro Verde, partly offset by increased production at El Abra.

For the year 2012, consolidated sales volumes from our South America mining operations are expected to approximate 1.2 billion pounds of copper and 95 thousand ounces of gold, compared with 2011 sales of 1.3 billion pounds of copper and 101 thousand ounces of gold. Molybdenum production from Cerro Verde is expected to approximate 8 million pounds for the year 2012, compared with 10 million pounds in 2011.

Unit Net Cash Costs. Unit net cash costs per pound of copper is a measure intended to provide investors with information about the cash-generating capacity of our mining operations expressed on a basis relating to the primary metal product for our respective operations. We use this measure for the same purpose and for monitoring operating performance by our mining operations. This information differs from measures of performance determined in

accordance with U.S. GAAP and should not be considered in isolation or as a substitute for measures of performance determined in accordance with U.S. GAAP. This measure is presented by other metals mining companies, although our measure may not be comparable to similarly titled measures reported by other companies.

35

Gross Profit per Pound of Copper

The following tables summarize unit net cash costs and gross profit per pound at the South America mining operations for the third quarters and first nine months of 2012 and 2011. Unit net cash costs per pound of copper are reflected under the by-product and co-product methods as the South America mining operations also had small amounts of molybdenum, gold and silver sales. Refer to "Product Revenues and Production Costs" for an explanation of the "by-product" and "co-product" methods and a reconciliation of unit net cash costs per pound to production and delivery costs applicable to sales reported in our consolidated financial statements.

Our South America mines have varying cost structures because of differences in ore grades and characteristics, processing costs, by-products and other factors. Unit net cash costs (net of by-product credits) for our South America mining operations averaged \$1.55 per pound of copper in third-quarter 2012 and \$1.48 per pound for the first nine

months of 2012, compared with \$1.15 per pound in third-quarter 2011 and \$1.12 per pound for the first nine months of 2011. Higher average unit net cash costs in the 2012 periods primarily reflected higher mining and input costs, including energy, and lower by-product credits. Unit net cash cost were also impacted by the timing of profit sharing in third-quarter 2012 and lower sales volumes for the first nine months of 2012.

Because certain assets are depreciated on a straight-line basis, South America's unit depreciation rate varies with the level of copper production and sales.

36

Table of Contents

Revenue adjustments primarily result from changes in prices on provisionally priced copper sales recognized in prior periods. To the extent prices are higher or lower than what was recorded on a provisional basis, an increase or decrease to revenues is recorded each reporting period until the date of final pricing. Refer to "Consolidated Results - Revenues" for further discussion of adjustments to prior period provisionally priced copper sales.

Assuming achievement of current sales volume and cost estimates and average prices of \$1,700 per ounce of gold and \$11 per pound of molybdenum for fourth-quarter 2012, we estimate that average unit site production and delivery costs for our South America mining operations would approximate \$1.61 per pound of copper and average unit net cash costs (net of by-product credits) would approximate \$1.50 per pound of copper for the year 2012, compared with \$1.20 per pound in 2011 (fourth-quarter 2012 site production and delivery costs are expected to average \$1.70 per pound of copper and unit net cash costs (net of by-product credits) are expected to average \$1.53 per pound of copper).

Indonesia Mining

Indonesia mining includes PT Freeport Indonesia's Grasberg minerals district. We own 90.64 percent of PT Freeport Indonesia, including 9.36 percent owned through our wholly owned subsidiary, PT Indocopper Investama. As previously reported, because of the potential benefits of having additional Indonesian ownership in PT Freeport Indonesia's operations, we have agreed to consider a potential sale of a 9.36 percent interest in PT Freeport Indonesia at fair market value (refer to Note 14 in our annual report on Form 10-K for the year ended December 31, 2011, for further discussion). We are also considering a potential offering of PT Freeport Indonesia shares on the Indonesia stock exchange.

PT Freeport Indonesia produces copper concentrates, which contain significant quantities of gold and silver. Substantially all of PT Freeport Indonesia's copper concentrates are sold under long-term contracts, of which approximately one-half is generally sold to affiliated smelters, Atlantic Copper and PT Smelting (PT Freeport Indonesia's 25-percent owned copper smelter and refinery in Indonesia) and the remainder to other customers.

We have established certain unincorporated joint ventures with Rio Tinto plc (Rio Tinto), under which Rio Tinto has a 40 percent interest in certain assets and future production exceeding specified annual amounts of copper, gold and silver. Refer to Note 2 in our annual report on Form 10-K for the year ended December 31, 2011, for discussion of our joint ventures with Rio Tinto.

Operating and Development Activities. We have several projects in progress in the Grasberg minerals district, primarily related to the development of the large-scale, high-grade underground ore bodies located beneath and nearby the Grasberg open pit. In aggregate, these underground ore bodies are expected to ramp up over several years to approximately 240,000 metric tons of ore per day following the currently anticipated transition from the Grasberg open pit in 2016. Over the next five years, aggregate capital spending on these projects is currently expected to average \$700 million per year (\$550 million per year net to PT Freeport Indonesia). Considering the long-term nature and large size of these projects, actual costs could differ materially from these estimates.

The following provides additional information on these projects, including the continued development of the Common Infrastructure project, the Grasberg Block Cave and Big Gossan underground mines, and development of the Deep Mill Level Zone (DMLZ) ore body that lies below the Deep Ore Zone (DOZ) underground mine.

Common Infrastructure and Grasberg Block Cave. In 2004, PT Freeport Indonesia commenced its Common Infrastructure project to provide access to its large undeveloped underground ore bodies located in the Grasberg minerals district through a tunnel system located approximately 400 meters deeper than its existing underground tunnel system. In addition to providing access to our underground ore bodies, the tunnel system will enable PT Freeport Indonesia to conduct future exploration in prospective areas associated with currently identified ore bodies.

The tunnel system was completed to the Big Gossan terminal, and the Big Gossan mine was brought into production in fourth-quarter 2010. Development of both the DMLZ and Grasberg Block Cave is advancing, and access to these underground ore bodies is complete.

The Grasberg Block Cave underground mine accounts for over one-third of our reserves in Indonesia. Production at the Grasberg Block Cave mine is currently scheduled to commence at the end of mining the Grasberg open pit, which is currently expected to continue until 2016. The timing of the transition to the underground Grasberg Block Cave mine will continue to be assessed. Targeted production rates once the Grasberg Block Cave mining operation reaches full capacity are expected to approximate 160,000 metric tons of ore per day.

Table of Contents

Aggregate mine development capital for the Grasberg Block Cave mine and associated Common Infrastructure is expected to approximate \$4.2 billion (incurred between 2008 and 2021), with PT Freeport Indonesia's share totaling approximately \$3.8 billion. Aggregate project costs totaling \$788 million have been incurred through September 30, 2012 (\$219 million during the first nine months of 2012).

Big Gossan. The Big Gossan underground mine is a high-grade deposit located near PT Freeport Indonesia's existing milling complex. Production, which began in fourth-quarter 2010, averaged 1,900 metric tons of ore per day in third-quarter 2012. Full rates of 7,000 metric tons of ore per day are expected in 2014 (equal to average annual aggregate incremental production of 125 million pounds of copper and 65,000 ounces of gold).

DMLZ. The DMLZ ore body lies below the DOZ mine at the 2,590-meter elevation and represents the downward continuation of mineralization in the Ertsberg East Skarn system and neighboring Ertsberg porphyry. We plan to mine the ore body using a block-cave method with production beginning in 2015, near completion of mining at the DOZ mine. Drilling efforts continue to determine the extent of this ore body. Aggregate mine development capital costs for the DMLZ mine are expected to approximate \$2.2 billion (incurred from 2009 to 2020), with PT Freeport Indonesia's share totaling approximately \$1.3 billion. Aggregate project costs totaling \$451 million have been incurred through September 30, 2012 (\$182 million during the first nine months of 2012). Targeted production rates once the DMLZ mining operation reaches full capacity are expected to approximate 80,000 metric tons of ore per day.

Other Matters. PT Freeport Indonesia is engaged in discussions with the Indonesian government on its operations, future plans and Contract of Work (COW). We are working cooperatively with the government in its review of PT Freeport Indonesia's COW and to seek an extension of our COW to 2041, pursuant to the terms of the contract. Refer to Note 14 of our annual report on Form 10-K for the year ended December 31, 2011, for further discussion of PT Freeport Indonesia's COW.

Between July 2009 and October 2012, there were 37 shooting incidents in and around the Grasberg minerals district, including along the road leading to our mining and milling operations, which resulted in 15 fatalities and 57 injuries. The investigation of these matters is continuing. We have taken precautionary measures, including limiting use of the road to secured convoys. The Indonesian government has responded with additional security forces and expressed a commitment to protect the safety of the community and our operations. Prolonged limitations on access to the road could adversely affect operations at the mine. The safety of our workforce is a critical concern, and PT Freeport Indonesia is working cooperatively with the Government of Indonesia to address security issues. Refer to "Risk Factors" contained in Part I, Item 1A of our annual report on Form 10-K for the year ended December 31, 2011, for further discussion.

Operating Data. Following is summary operating data for our Indonesia mining operations for the third quarters and first nine months of 2012 and 2011:

| | Three Months Ended September 30, | | Nine Months Ende September 30, | |
|--|----------------------------------|---------|-----------------------------------|-----------|
| | 2012 | 2011 | 2012 | , 2011 |
| Operating Data, Net of Joint Venture Interest | 2012 | 2011 | 2012 | 2011 |
| Copper (millions of recoverable pounds) | | | | |
| Production | 199 | 233 | 495 | 778 |
| Sales | 195 | 253 | 512 | 796 |
| Average realized price per pound | \$3.72 | \$3.29 | \$3.64 | \$3.82 |
| Gold (thousands of recoverable ounces) | | | | |
| Production | 182 | 357 | 641 | 1,123 |
| Sales | 178 | 384 | 691 | 1,168 |
| Average realized price per ounce | \$1,728 | \$1,695 | \$1,665 | \$1,565 |
| 100% Operating Data | | | | |
| Ore milled (metric tons per day): ^a | | | | |
| Grasberg open pit | 136,500 | 107,000 | 116,700 | 137,200 |
| DOZ underground mine | 48,300 | 43,900 | 42,300 | 58,900 |
| Big Gossan underground mine | 1,900 | 1,300 | 1,400 | 1,800 |
| Total | 186,700 | 152,200 | 160,400 | 197,900 |
| Average ore grades: | | | | |
| Copper (percent) | 0.63 | 0.90 | 0.61 | 0.80 |
| Gold (grams per metric ton) | 0.46 | 1.14 | 0.60 | 0.92 |
| Recovery rates (percent): | | | | |
| Copper | 87.7 | 89.8 | 88.6 | 88.2 |
| Gold | 71.4 | 82.4 | 76.7 | 81.3 |
| Production (recoverable): | | | | |
| Copper (millions of pounds) | 199 | 237 | 495 | 803 |
| Gold (thousands of ounces) | 182 | 408 | 641 | 1,261 |

Amounts represent the approximate average daily throughput processed at PT Freeport Indonesia's mill facilities a. from each producing mine.

Sales volumes from our Indonesia mining operations declined to 195 million pounds of copper and 178 thousand ounces of gold in third-quarter 2012 and 512 million pounds of copper and 691 thousand ounces of gold for the first nine months of 2012, compared with 253 million pounds of copper and 384 thousand ounces of gold in third-quarter 2011 and 796 million pounds of copper and 1.2 million ounces of gold for the first nine months of 2011, primarily reflecting anticipated lower ore grades. The first nine months of 2012 were also impacted by lower production rates associated with the first-quarter 2012 work interruptions and the related temporary suspension of operations.

At the Grasberg mine, the sequencing in mining areas with varying ore grades causes fluctuations in the timing of ore production resulting in varying quarterly sales of copper and gold. Consolidated sales volumes from our Indonesia mining operations are expected to approximate 0.7 billion pounds of copper and 0.9 million ounces of gold for 2012, compared with 846 million pounds of copper and 1.3 million ounces of gold in 2011. Indonesia's current sales volume estimates for 2012 are approximately 40 million pounds of copper and 45,000 ounces of gold lower than the estimates provided in our quarterly report on Form 10-Q for the period ended June 30, 2012, because of mine plan changes in the Grasberg open pit, which delayed access to higher grade material, and a slower ramp-up of the DOZ mine. The slower than anticipated ramp-up reflects more extensive repairs required following the 2011 suspension of operations.

The DOZ mine is expected to ramp up to 80,000 metric tons of ore per day in 2013. FCX expects sales from Indonesia to increase in the second half of 2013 as PT Freeport Indonesia gains access to higher ore grades.

Table of Contents

Unit Net Cash Costs. Unit net cash costs per pound of copper is a measure intended to provide investors with information about the cash-generating capacity of our mining operations expressed on a basis relating to the primary metal product for our respective operations. We use this measure for the same purpose and for monitoring operating performance by our mining operations. This information differs from measures of performance determined in accordance with U.S. GAAP and should not be considered in isolation or as a substitute for measures of performance determined in accordance with U.S. GAAP. This measure is presented by other metals mining companies, although our measure may not be comparable to similarly titled measures reported by other companies.

Gross Profit per Pound of Copper and per Ounce of Gold

The following tables summarize the unit net cash costs and gross profit per pound of copper and per ounce of gold at our Indonesia mining operations for the third quarters and first nine months of 2012 and 2011. Refer to "Production Revenues and Production Costs" for an explanation of "by-product" and "co-product" methods and a reconciliation of unit net cash costs per pound to production and delivery costs applicable to sales reported in our consolidated financial statements.

Table of Contents

Because of the fixed nature of a large portion of PT Freeport Indonesia's costs, unit costs vary from period to period depending on volumes of copper and gold sold, as well as average realized gold prices during the period. Unit net cash costs (net of gold and silver credits) for our Indonesia mining operations totaled \$1.65 per pound of copper in third-quarter 2012 and \$1.20 per pound of copper for the first nine months of 2012, compared with net credits of \$0.48 per pound of copper in third-quarter 2011 and \$0.14 per pound of copper for the first nine months of 2011. Higher unit net cash costs in the 2012 periods primarily reflected lower sales volumes.

Treatment charges vary with the volume of metals sold and the price of copper, and royalties vary with the volume of metals sold and the prices of copper and gold.

Because certain assets are depreciated on a straight-line basis, PT Freeport Indonesia's unit depreciation rate varies with the level of copper production and sales.

Revenue adjustments primarily result from changes in prices on provisionally priced copper sales recognized in prior periods. To the extent prices are higher or lower than what was recorded on a provisional basis, an increase or decrease to revenues is recorded each reporting period until the date of final pricing. Refer to "Consolidated Results - Revenues" for further discussion of adjustments to prior period provisionally priced copper sales.

Quarterly unit net cash costs are expected to vary significantly with variations in quarterly metal sales volumes, as well as average realized gold prices during the period. Assuming achievement of current sales volume and cost estimates, and an average gold price of \$1,700 per ounce for fourth-quarter 2012, we estimate that average unit site production and delivery costs for Indonesia would approximate \$3.24 per pound of copper and average unit net cash costs (net of gold and silver credits) would approximate \$1.34 per pound of copper for the year 2012, compared with \$0.09 per pound in 2011 (fourth-quarter 2012 site production and delivery costs are expected to average \$3.35 per pound of copper and unit net cash costs (net of by-product credits) are expected to average \$1.70 per pound of copper). Indonesia's unit net cash costs for 2012 would change by \$0.02 per pound for each \$50 per ounce change in the average price of gold during fourth-quarter 2012. Assuming consistent commodity price assumptions, Indonesia's unit net cash costs for future periods are expected to be lower than 2012, as PT Freeport Indonesia accesses higher grade ore beginning in the second half of 2013.

Africa Mining

Africa mining includes the Tenke copper and cobalt mining concessions in the Katanga province of the DRC. The Tenke mine includes surface mining, leaching and SX/EW operations. Copper production from the Tenke mine is sold as copper cathode. In addition to copper, the Tenke mine produces cobalt hydroxide.

We hold an effective 56 percent interest in the Tenke copper and cobalt mining concessions and are the operator of Tenke. Effective March 26, 2012, the DRC government issued a Presidential Decree approving modifications to TFM's bylaws. As a result, our and Lundin Mining Corporation's ownership interest in Tenke totals 80 percent (previously 82.5 percent) and Gecamines' ownership interest totals 20 percent (previously 17.5 percent).

Operating and Development Activities. Our investment in the initial project approximated \$2 billion, and we have received intercompany loan repayments, including interest, of approximately \$840 million through September 30, 2012.

We are nearing completion of a second phase of the project, which includes optimizing the current plant and increasing capacity. We are expanding the mill rate to 14,000 metric tons of ore per day and are completing construction of the related processing facilities that target the addition of approximately 150 million pounds of copper per year in 2013. The approximate \$850 million project includes mill upgrades, additional mining equipment, a new tankhouse and a sulphuric acid plant expansion. Construction activities are progressing well and are expected to be

substantially complete by year-end 2012. The addition of a second sulphuric acid plant is expected to be completed in 2015. The second phase of the project is being funded primarily with cash generated from operations, and for additional required funds, we are funding 70 percent and Lundin Mining Corporation is funding 30 percent. Project costs of \$535 million have been incurred as of September 30, 2012 (\$367 million during the first nine months of 2012).

During third-quarter 2012, Tenke achieved record mining, milling and copper production rates. Improved performance and the second phase expansion are expected to enable copper production to exceed 400 million pounds for the year 2013, compared with initial design capacity of 250 million pounds per year.

41

Table of Contents

We continue to engage in drilling activities, exploration analyses and metallurgical testing to evaluate the potential of the highly prospective minerals district at Tenke. These analyses are being incorporated in future plans to evaluate opportunities for expansion. Future expansions are subject to a number of factors, including economic and market conditions, and the business and investment climate in the DRC.

Other Matters. Salary scale for TFM's union-represented employees is negotiated outside of the Collective Labor Agreement. In September 2012, TFM successfully renegotiated a 4-year salary scale with union-represented employees.

Operating Data. Following is summary operating data for our Africa mining operations for the third quarters and first nine months of 2012 and 2011:

| | Three Months | Ended | Nine Months Ended | | |
|---|---------------|-------|-------------------|------|--|
| | September 30, | | September 30, | | |
| | 2012 | 2011 | 2012 | 2011 | |
| Copper (millions of recoverable pounds) | | | | | |
| Production | 91 | 71 | 250 | | |
